>

No, I am talking about Oregon law and how the court interprets the
wire tap and radio laws. Unless you receive it on CB, Ham or unencrypted
government channels it is not admissible, even if it is a felony. Oregon
courts are very liberal so they bend over back wards to protect the rights
of the accused . Recently a Portland Blazer had his house broken into
and the police found drugs while searching the home. The courts ruled
it an illegal search.

There were a number of cases involving FRS radio use by protesters in
Eugene and Portland and the courts ruled the monitoring and use of those

transmissions by the police as unlawful wire taps.

It all depends on how that States law is written and applied by the courts.
As a private citizen it is illegal to monitor anything except government
communications, CB and Ham radio. Everything else is illegal to listen to
in the State of Oregon. So if I catch my neighbor beating the kids on a
wireless video transmission then that is an illegal reception of a transmission
and the defendants lawyer will get any evidence suppressed involving that
transmission. We have beaten this topic to death on local discussion groups.

Here is the law:
http://home.attbi.com/~n6jpa/nworradio/legal.html

You will notice that it excludes criminal prosecution for reception of
felony acts, however that does not mean the police and courts can use any
evidence obtained by a citizen of a transmission as evidence in a criminal
trial. It means that the citizen that discloses those transmissions
involving a felony can not be prosecuted. However, if a citizen discloses a
misdemeanor criminal act they hear over the forbidden radio communications
frequencies they can be prosecuted. Basically here in Oregon unless it is
.gov, Ham or CB the smart person doesn't even talk about it.

I shutter everytime I here that stupid bastard speak on TV.
With him in control the sniper will never be caught.
Thank God he isn't in Portland anymore.
Can somebody teach Moose how to properly form sentences
so the sniper doesn't laugh his head off.
Maybe that is a good thing. Then he won't be able to shoot
straight as he giggles.

Went to my local chippe on Four acre Lane ST Helens and saw a notice saying they are linked to the police via radios ?!?!?!

Obviously I am going to have a scan around on the known freqs but does any one have any info on this, I appreciate it is very local to me but I know there's scanners out there, you only have to look at the chimney stacks.

The only problem is going to be the lack of traffic over the freq unless they are using the same numbers as St Helens town centre.

I have not as yet eye balled a radio but I will be looking for them.

If any one out there knows any thing I would appreciate a shout.

THANKS
RICK
St Helens Merseyside UK.

I've been wondering the same thing... I've noticed that the subhuman piece of excrement *appears* to be avoiding sniping in jurisdictions that have gone digital. Could it be that that's a favor. I emailed the observation/suspicion to the taskforce email address yesterday. You never know...

Hey, good point. Fairfax county's PD and most of their FD stuff is on the "new" digital system they have now. I'd have to go get my scanner almanac, does anyone remember what the other VA areas are using? I know Montgomery and PG are in the clear.

all depends what you want. if you want a canadian model scanner. You cannot go to Radio shack for that. If you want the pro 93 or so up. Drive to the states if they will not send it. You can always go to radioshack.com and order it from there. If I had one of those Like I was gonna buy. I would gladly drop one off for you. Reason being. I will be driving to sask soon. Not sure what route though.
Either hwy 16 or 1. hmm. anyways. I have bought from www.radioworld.ca and www.burnabyradio.com Both seemed great. One is in ontario and the other in BC. Where I am from.

3580. Can anyone help. Freq's for 2 meter repeaters and other freq's in Alta and Sask.

Newsgroup: rec.radio.scanner

I will be travelling from BC to alberta to Saskatchewan. I was wondering if anyone had a updated list of freq's for Alberta and Saskatchewan. I know Edmonton has some trunked Police freq's and some digital. So does saskatchewan. Yes. SasK-Catch-Chew-wen. I have 90% of BC freqs for police. + digital and private. outside of Vancouver. but yay. They still use most of the same freqs. Does Alberta use main channels Province wide Like BC does. Does Saskatchewan do that too ?

I would like to program a few 2 meter repeaters so I may have a quick QSO on my travels to there. I have searched on the web for the ham and other freq's but I do not know how accurate they are. I will be travelling along hwy 16 or hwy 1. thru to edmonton to uper sask. Maybe some freak wants to stalk me now. lol. Thanks in advanced.

Keith,

THANKS ! I was about to purchase the 780XLT for $359 and realized the
785 was due to be released for the same price. Should I wait a month and get
the 785D "digital ready"....the digital card is very expensive but I agree
it will probably come down over time.

I think I will wait a Month or so...the 780 will probably come down in price
and I hear the 785D is priced at $350 (w/o the digital card).

where is that in BC. 90 % or more of the standard frequencies in BC are the same. I don't know where millbay is so i cannot help you. If it is away from the Lower Mainland. Then they will always used the main freq's between 139 and 140 Mhz. A thru M and O and P are mostly the same everywhere in BC. I hope alta is the same.

huh. I was asking where millbay was. What is the point of me pasting a whole bunch of frequencies if they are not goona work. Tell me that. If millbay BC is not near the lower mainland. Then yes. I can give The main ones. But what is the point of giving useless frequencies if they don't work. I will look in a map today and post a reply. And you know where you can stick the troll thing. Since all you do is run down people usually.

WHAT THE HECK???? Somehow, that didn't answer the gentleman's question, least not in my mind.

This is going to be long - since the FCC licenses and the ISCET Certification were included in that response, I'll discuss each point.

According the FCC rules "I" have read, it is illegal for ANYONE to listen to cell calls, thus possess any equipment "able to receive them". Having cell phone equipment to repair such, does NOT give one the right or license to tap into conversations. They do not fall under the same header as Public Service such as 2 way radio such as used by Fire Departments, Police, EMS, Hams, CB, etc.

How tight are the restrictions? I was told via a Radio Shack manager I could trust and knew me well, that parts nor service info was available to me over the counter, nor even to "their local service shop". He said - ALL equipment with "any" 800 MHz capabilities had to be shipped to Texas since the new laws came into effect. Apparently, that is RS new policy to comply. Maybe he was pulling my chain. I had no reason to doubt his word, so I never tested the statement.
If what he said is true, what does that tell you? I don't think you want to go out and pay to "get licensed or certified" or pay big bucks for a Service monitor either or other test equipment for cell phones- just to tap in to cell calls. Somehow, that is like having more money and/or time than brains. Most shops have enough trouble getting and keeping up a monitor to use for normal business needs.. To train in electronics just to listen to cell calls? Makes no sense to me.

As to the ISCET - it is unfair in my book. The GROL / Commercial FCC License exams are "not" easy. Maybe not as difficult as once was, but no one is going to march in unprepared, sit down and pass it. The FCC licenses have made many changes since I've acquired mine many years ago. I know, I'm an examiner. I've seen many fail who came in with the "all knowing" attitude - most likely never looked at a study guide once. That applies to both Amateur and Commercial. The funny thing is, and most I think will agree to this, is those who did pass, practically messed their pants prior to or as taking the exam. With a great sense of relief when it was over to find - they PASSED.

This summarization comes from what "I" read from ISCET information I've been sent in the past.

IF you get an ISCET Certification - having taken their exam, you can use it to get an FCC Commercial License "without" further testing. However, those with FCC Commercial licenses "seeking" ISCET Certification have to take and pass the ISCET exam to be ISCET Certified! You can NOT use the FCC license

as proof to acquire it without further testing.

How is that fair? I hold and have held for quite some time, an FCC license. Amateur Extra as well as Commercial. I don't feel I need to prove myself any further. It should work both ways. I shouldn't have to pay extra money to sit in for an exam to prove what they themselves say, is basically an equivalent skill. "Most" people think of FCC licenses anyway when needing their transmitters repaired. NOT ISCET. So, I'm not wasting my time. "If" and "when" the FCC says I need it, "then" I'll consider it. By then, I may be too old to care anyhow.

Furthermore, I know 2 way radio shops who think not about ISCET, they think in terms of FCC license. A very good 2 way radio repairman, having been employed by a shop for a while, had to come take his exam if he expected to move up in his job. They required the "FCC" license, NOT ISCET. So, tell me, what does that say? I would say it speaks for itself.

Yes, a lot of bite has been taken out of the FCC license. But with tougher RF regulations coming into play, it may be fitted with Dentures to put the bite back in. Otherwise, no one will check their systems UNLESS forced to. Regulations by the way, "not" set forth by the ISCET, but by the FCC. At least in my area, if a place wants their transmitter repaired or even tested, they still seek out FCC licensed individuals. Heck, most never even heard of ISCET!

I'm "not" saying ISCET - the "certification" or agency(ies) thereof have no value. Not at all. But I debate it's being placed side by side to FCC "licensing".

No bite to the FCC licensing? I know of a Radio Station who's "engineer(?)" - admitted to me (laughing) - they are not FCC licensed and have no intents of doing so...How does the station sound? Well - ok, when it is on the air! There are many times when they've been off the air more than on. One of the DJs was complaining ON AIR one night for the "engineer" to get off his butt to fix it right. So, no FCC license being required in the way of cutting corners, is just that - cutting corners. I've heard the same complaints on other stations as well. Most are used to the "Engineer" there - knowing what to do. Not some one who can't get past soldering a wire or changing a fuse. A station struggling for listeners sure isn't going to keep them with a half assed station.

I will add one opinion though to rock the boat of authority regarding the Cell Phone listening deal. They make or state it - to be illegal for the public to be allowed to intercept calls, which to me would be boring anyhow - BUT - they can listen in to calls for "terrorism and so on". I guess I'm glad they do, if it keeps US safe, but it seems kind of contradictory! Like you standing there telling a kid not to play with matches for fear of causing a house fire, while you're setting a house on fire. Makes no sense to the kid!

My two cents.

Perhaps I "mumble" a bit too freely at times. But basically, if you aren't allowed to listen, it may as well be illegal to OWN the stuff to do it with. Why own something you can't use. Kind of silly, don't you think? A misstated point on my behalf. Thanks for clarifying my point..

It is more valuable because I originally paid $350.00 for the scanner. Many of you that remember the original 2006 in the 1992 Radio Shack Catalog will realize that it did sell for $350.00. The 2006 is the best scanner ever made and it is highly unlikely that anyone will find one "new in the box". Therefore, it has appreciated in the last several months and is worth at least $400.00. :-) This scanner is really "new in the box" and I will meet anyone in Southern California that would like to see it personally.

I have been seeing the scanners go for about $200 and the OS456 board for
about the same.

What is a Pro-2006 with a OS456 board and PROBE version 6 worth these days.
I've seen them on ebay for $450+ Is it really worth that?

Thanks.

Find out if it is your poawer supply on hte modem. see if it is a switching power supply. There was someone that gave me info when I had the same problem with my Hub. But. Try the power supply first. Most of them are crap. Well they work great. But they cause the equipment to have RFI. For some reason this ADSL modem does not cause anything. I forgot. Are you using a rubber ducky or any antenna in the house. If you are. Use a external one.

Does anyone know if the police and/or fire departments in this area switched systems recently (past year or so)? If so, what kind of system did they switch to?

I don't live in the area, but my wife's father does and he says his scanner no longer picks up the police, but it does still receive fire/rescue calls.

Thanks,
B

Listen genius, it's 10 years old. How can it be new?
Did you mean unused, or barely used?

If you just turned on the unit once, then it is used.

Source record: 42890

If the other poster's suggestions re. power supply don't work then try shielding the scanner with a grounded aluminum foil box (you could wrap the foil around a cardboard box frame or even on the outside of the scanner itself; Bill Cheek in his books even suggested spraying the inside of the scanner case with electrically conductive paint and grounding this conductive paint layer). You might have to re-orient the scanner several times to ward off the RF from the modem or its power supply, even after shielding. Most scanners are not shielded and just have plastic cases. Bill Cheek himself discussed this problem and its solution in his books. I have not have RFI problems with my scanners but I did have this problem with an old unshielded Sylvania cable TV converter. The converter refused to change channels while the TV was on, until I wrapped the converter in foil and grounded the foil.

Let us all know how things work out, and hope this helps.

Regards,

Ian Douglas

WANTED TO BUY...A NON-working older ELECTRA/Bearcat base scanner, model BC-20/20 (preferred) OR an older NON-working Electra/Bearcat BC-220 base scanner FOR PARTS. Need the FACEPLATE to replace broken one on mine that the USPS "killed" with a FORKLIFT!!! Will buy either JUST the faceplate OR the entire NON-WORKING scanner for parts but....the faceplate MUST be complete, intact, not cracked or broken, and in VERY good to EXCELLENT condition (no deep gouges, scratches, etc., but OK for faded silver paint around edges...)as it is THE part I'm seeking. Will pay decent price for the right one. IF POSSIBLE, pic of your unit would be MUCH appreciated WITH your Email reply. Please remember I want to REUSE the faceplate so it MUST be restorable, VERY intact, AND USEABLE !!I will answer ALL replies. Also have some vintage scanner parts for trade/barter to "sweeten" the deal as well IF DESIRED...LMK your needs.Otherwise, will buy radio or faceplate only outrite from you.

THANKS IN ADVANCE to all who reply. (<:

I'm thinking this guy is some loser who invested in some port scanning
software and now he needs a reason to justify it, so he now has mounted a
Yahoo listserv that preaches hate against what his users like to term "Ruddy
People".....what, is that some sort of Jamaican epithet?
Shit, my suntan makes me look integrated, and I have enough Sicilian to
almost be called black myself, but he is sending me hate mail on a daily
basis now.
So, while I delete voluminous treatii on everything from reparations to the
teachings of Elijah Muhammed (get yo hands out mah pockets!)I have decided
to do a little sniffing myself.

Purchased new in 97/98 and played with for one week. Boxed and on the
shelf for four or five years. Just checked it out pending a sale.
Perfect and immaculate.
$175 Shipped from Florida. Post or Emal

3639. OT? -- How can range of cordless phone be increased?

Newsgroup: rec.radio.scanner
Date: 2002-10-15 08:01:57 UTC
From: zxc@vbn.com
Message-ID: <6qinqu0h1e4bc7mhngcengkug0ja2851j2@4ax.com>
Source record: 42878

Hi:
I'm brand new here -just discovered this newsgroup about 20
minutes ago.
I want to get a cordless phone. I've tried 3 (2.4G) in the
past 2 weeks, but none have the range to reach the pool in my back
yard (about 700 feet behind house.)

Is there any way (legal or otherwise) to boost the range of a
cordless phone so that it will reach this distance?

Can you suggest anywhere I might go on the web to get more info?

Thanks for any help!!

3640. Re: United Parcel Service frequencies?

Newsgroup: rec.radio.scanner

Freqs for UPS in Rockford. The 900 Freqs are a 900 Mhz Motorola Type 2 trunked system used at the building complex at the airport. The system has very limited coverage. You must be quite close to the building complex to hear it. I haven't listened to the UHF Freqs. They may offer better coverage but may also have other users on them in the area.

461.27500
461.80000
463.37500
463.67500
463.77500
464.52500

935.13750
935.21250
935.22500
938.16250
938.18750
938.23750
939.16250
939.18750
939.71250
939.73750

There is also a Freq at the airport in the 128.825 -to- 132.000 Band in AM Mode used by the aircraft but I'm not sure which it is, probably one of these:

129.12500
129.42500
129.97500
130.02500
130.52500
130.57500
130.95000
131.55000
132.00000

Let us know what you hear!

Happy Scanning! - Ted

I had $7000.00 to spend on gear in 1994 and placed an order for a radio. Burnaby told me to come back in a week and they would have it. So I did with almost $3000.00 in my hand and took time off work to go get the rig and accessories. They didn't have it. They did this about 3 more times and each time I would get to them they would say they couldn't find it or had just sold it or the order was late and try to sell me the Yeasu FT-736 without the modules. I finally got fed-up with going up to pick up the Yeasu FT-767 and gave up.

About the pawnshops you missed one of my posts a while back. They won't even take scanners now. That is the response I got from the ones along Hastings and up the Grandville mall. They sold out of what they had and won't take anymore because they can't sell them.

You are talking about driving from Surrey to Vancouver like it is a long 20 min drive.

You will have to get a European Logic board and replace the existing one.
The European board has no skips. You should be able to pick one up for
around $150.00. It is a plug-in replacement.

Montgomery County is indeed in the clear and was very active on that first Thur with the multiple shootings.

What other agencies are worth listening to? I'm guessing FBI and ATF are, but which frequencies have been active (that aren't digital or encrypted). I haven't done a search yet to see if I'm getting anything. (I was out of the area all last week until yesterday)

I have a nice Yaesu VX-5r HT with leather case, improved Motorola belt clip and a quick reference guide. The HT works flawlessly. I have the manual, box, charger and all original documentation.

Asking $175 plus shipping. Please email directly if interested. mmalloy@wi.rr.com

> Is there any way (legal or otherwise) to boost the range of a
>cordless phone so that it will reach this distance?

Legal: Well, off the bat I'd say get a good quality commercial
cordless phone system (like the Siemens and Nortell) which is used in
businesses and warehouses. Of course they do NOT come cheap.

Not legal (in my country): Get a 2.4ghz cellphone, change base
antenna for a high gain colinear 2.4ghz "wireless networking" antenna.
Change the handset antenna too. A good "do it yourself" solution, but
it can possibly interfere with your neigbours 2.4g wireless networks,
house alarms or cordless phones.

Just do a websearch for "colinear 2.4ghz wireless networking antenna",
there are hundreds of plans out there on the net, or ready made
models.

Be aware that if this is illegal in your country you can get in
serious trouble with the authorities.

You know, here in Canada where it is legal to listen to cellphones you
also do not need a scanner to do so. :) Just go to any public place
and a dozen rude jerks with cellphones glued to their ear will be
"sharing" their conversation with anyone in earshot.

And if you're not in earshot they'll shout louder for your benefit :)

I've got a VHF low band BellSouth cordless converted to BNC base antenna adaptor and SMA on the handset. With Antron A99 antenna (replaced top section with 102" whip that was cut down to about 48") as base and a 1/4 wave handset antenna, I was able to achieve about a mile of range.

I also have a Celwave UHF 900MHz base station antenna with 7dB of gain that I have not played with yet.

Sorry for any delay in replieing, as I was gone for the long weekend.
I have a file called scanal10.zip, for radio comm's that you can hear
in Calgary and area. If you wish, I can attach it to an E-mail. As
well you may want to visit www.cara.ampr.org. for ham repeaters in
Calgary.

So far my initial tries show that the tk2 software and cable for my
vr500 will talk to the R3. Download the file but the channel lables, and
maybe more throws off the processing of the file. I have started to
alter the tk2.0.2 copy I have to make a tk3 program, but haven't set
down to map the R3 file yet. It is neat to see "IC-R3", and "tk3" on the
computer screen, but the program is a long way from functional yet.

I would be happy to work with others on tough part of this.

Bob, I have a question. I just upgraded to Redhat 8.0, tcl/tk is still
on the machine. However tk500, tk120, and tk3 (if I can use this
nominclature) no longer run. I haven't had time to figure out why yet,
and thought maybe someone else already has. Any ideas?

3657. Beware! Doug Calladonato !!..

Newsgroup: rec.radio.scanner
Date: 2002-10-15 23:55:31 UTC
From: klarrg@aol.com
Message-ID: <20021015195531.19555.00000125@mb-fs.aol.com>
Source record: 42895

..Be aware that a gent by the name of Doug Calladonato (njscanner@comcast.net)is selling several scanners (approx. 21 of them..) and, is willfully and maliciously misrepresenting the condition of these units to obtain a sale on them.He sold me two that he represented as in "excellent working order" and, that he "tested himself before sending them to me" that are BOTH totally non-working, useless units. I am out a SUBSTANTIAL SUM OF $$$ and he denies they were non-working at time of sale.Mr. Calladonato outright lied and denied several Emails he initially sent me that represented theses radios I got from him as TOTALLY WORKING UNITS...he says one thing IN PRINT in the original Emails then DENIES IT in the later ones..even tho' I have it IN PRINT IN MY FILES FROM HIM !! (???!!)

Upon opening the units, they were filled with poor-quality solder (attempted) repairs and had obviously been tampered with prior to the sale. The one unit has a squelch that will not close, and the unit wont even scan. The second one has such poor reception as to make it useless. If both units HAD been tested as seller stated, these problems would have been painfully obvious.
I have contacted this gent asking him for a refund and he ignores my efforts entirely. I am posting this to advise any potential customers of this seller to AVOID doing business with him Currently, I am in the process of legal action againt this crook.His actions are obviously dishonest in nature and I have adequate proof in the form of Emails from him and, two DOA radios to prove it.

Buyers beware AVOID THIS CLOWN !!.Dont get SCREWED like I did by this jerk !)<:

I'm still running Red Hat Linux 7.3, though I'm considering
a move to 8.0 AFTER most of the bugs are worked out
like you are doing :-)

What are the failure symptoms?
What version of Linux were you running previously?

Be sure your serial ports have the correct
permissions. Since you just upgraded the operating
system, this may have turned off write permissions
for /dev/tty-mumble.

Make sure the environment variables tk120, tk500, and tk3
are still set to point to the proper directories.

Also, I recommend you install recent RPMs for
Tcl/Tk if you are using older ones. The should be
available on the Red Hat CDROMs.

I may be able to help you. I have a service manual for the BC 200 XLT.

Q201 is located on what Uniden calls the "Micom PCB". From the photo it appears that this is the board that contains the display. There is a (U) notch cut at the bottom of the board. At the top of that notch is IC202 (TK11750). Look to the right (top view) and you should see Q201 (2SB815B6YDK) next to connector P201. It is next to R204, a 47K resistor.

C36 and C55 are located on the main pcb, near the PLL unit. Locate the PLL unit (top view) then look to the right, near the edge of the circuit board. You'll find C55 (220uf 10V) there. Follow that edge of the board to the back and you will find C36 (220 uf 10V) (next to IC2 NJM386) From the front of the circuit board to the rear it goes C60 (.001), C55 (220/10), C56 (47/16), L9, C38 (100/10), C36 (220/10), and C37 (4.7/25).

Hope this info helps you out. By the way, just curious, what kind of symptoms is this scanner producing......or why are you hunting these parts?

Mac

Ian;

Thanks for the suggestion. I dislike the idea of covering the radio
with aluminum foil, but I will try that first. I am using an outside
antenna. I have since found out that the power supply in the computer
and the modem both are causing interference. Funny that my cheap
Cobra SR-10 with a whip antenna in the room here has no problem with
interference. I may move the computer out of my room. Any other
suggestions would be appreciated. Thanks and have a great day! Jon.

I do not understand why there is still discussion on this newsgroup regarding listening to cellular phone calls. Just about all cellular phone systems in the USA are digital and since all scanners receive analog transmissions only, it is not possible to listen to cellular. Most cellular companies are now offering digital phones to all of their customers at no charge. Most customers also do not want to use analog phones because the battery life is ten times shorted than the battery life of a digital phone. If you live in a rural area (a.ka. Hicksville) this does not have digital coverage, you may be able to receive cellular phone calls. Also, you may be able to receive cellular phone calls in the event that someone is roaming on a cell system with incompatible digital technology. In this case the phone will operate in analog mode. Why would anyone want to listen to phone calls anyway unless you are a private investigator that is attempting to gather information?

That is correct. It has the dimmer switch rather than the improvement that completely turns that light off. Are you interested in purchasing the scanner. If so, make me an offer that I cannot refuse.

what type of coax now
you sure the computer power supply? not the monitor. Monitors will cause lots of RFI. I changed vid cards andnow never have lots of video RF. If you shut off your monitor, does some of the RF go away ? If itdoes. change the refresh rate of your card and monitor.

RS has various multi-plug, multi-voltage lighter plugs for it. I'm not familiar with the battery holder you have, but if you're handy at all, you should be able to create something that will work. Is there an equivalent Bearcat model? If so, the holder from that may work.

The original drawing is so poor I don't believe it will be readable if I scan it. It is barely readable as it is. Sorry! Are you losing audio signal or RF? I might be able to look at it and tell you something to check.

3677. New System for Alabama Troopers

Newsgroup: rec.radio.scanner
Date: 2002-10-16 21:28:42 UTC
From: k_moats <k_moats@eudorabummail.com>
Message-ID: <eSkr9.3804$oC1.3113@news.bellsouth.net>
Source record: 42815

Network will link troopers statewide

10/15/02

GINNY MacDONALD
Birmingham News staff writer

Alabama officials plan to begin building a communications system that will link all state troopers and allow local police agencies to tap into the network.

Bids were taken last week for the first part of the network, which will link troopers in 27 south Alabama counties. Over three years, the entire state will join the network.

Bids to set up the system were for $8.3 million from Motorola and $9.9 million from M/A-Com.

The south Alabama network should be operating in 18 months, said Department of Public Safety Director Col. Jim Alexander.

The bids are for a digital radio system that would be able to carry computer data. Equipment includes mobile radios for cars, portable radios to be worn on uniforms, station radios, and transmitters and receivers.

A mobile data system for laptop computers for trooper cars would be added through a separate bid later this year.

Alexander said the state has the poorest communications system in the nation. Thirty-five percent of the troopers across the state cannot talk to their posts, especially those in rural areas.

"We have very poor coverage," the director said.

For instance, two years ago state trooper John Bailey stopped a man suspected of driving under the influence in Butler County. The man drove to a house trailer, went inside and came back with a rifle and fired several shots.

Bailey fired back and wounded the man, but the trooper had to go to a nearby house to telephone for help because his radio would not reach his post or the sheriff's office.

Last week's bids lock equipment prices in for three years, meaning each law enforcement agency wanting to join the network will get a price list for each item, such as a radio or base station. The price of the equipment will depend on which company's bid is selected.

After three years, Public Safety would renegotiate the price, Alexander said.

He said he wants to have the system operating statewide in three years.

Public Safety has the money for the network in its budget and in a special trust fund, Alexander said. The department is also seeking federal money to expand and add to the communications system.

Homeland security:

If federal money becomes available, state money could be used to hire additional troopers or for capital improvements to trooper posts across the state.

"We will go after homeland security funds. One of the big proponents of homeland security is for communication. We will ask for that and we have talked with Sen. Shelby and Sen. Sessions," Alexander said. "We are staying on top of what money is available from the feds."

This is the third attempt by Public Safety to buy a communications network. Last November, Gov. Don Siegelman canceled a $15 million communications contract that he had signed in March following Birmingham News articles that his staff and Public Safety arranged for SmartCop of Pensacola to get the contract without seeking bids or proposals from other companies.

Earlier this year, the state Finance Department threw out as too expensive a $24.5 million bid for a statewide computer network.

After that, Public Safety officials scaled back their equipment request and opted to buy the system bit by bit during the next three years.

Hello and thanks for reading,

I have acquired a Midland 70-253B (450-470 mhz, 16 channel, UHF) that works very well but I would like to reprogram the radio. I am looking for programming info, what is required, etc.

thanks,

Nick

Most of the info these guys are bitching about are compilations.
Collecting and assembling facts and information isn't enough. Compilations,
just as any other work, may only be copyrighted if the originality
requirement, "an original work of authorship," is met.
A copyrightable compilation enjoys only limited protection. The copyright
only covers the "author's original contribution -- not the facts or
information conveyed."
So, only the author's presentation is copyrightable, the info contained
within is not.

George's site is very helpful. Where he got his freqs from is unimportant.

I believe that's an EPROM or crystal-controlled radio from circa 1986-1990.

Just use the existing cell system like they did in the Lower Mainland of British Columbia Canada. That is how they can drop the price the system is already up and running just sell then the radios.

Just found out something else about the BC system. A little red button on the top of the Hand Held that when pushed gives the dispatch the exact location to within a yard or two of the Hand Held and signals an emergency. The officer doesn't have to speak or key up again and the dispatch can track him in a foot chase and get blocker cars into the path. Not bad at all.

Sorry for the lack of PC info. (and the crappy pictures on Ebay !!)

The laptop is a color 486 with a 500 meg H/D and 16 meg. of ram.
Compared to todays standards it is a dinosaur, but more than adequate to
run PROBE. It is in really good shape and is configured with Win. 95.
Additional software (shareware) is included.

Hope this answers some of your questions and please don't hesitate to
contact me off-group if you have any more questions.

Thanks for the bandwidth.

Hi!

I just finished the audio mod for my 2006. The mod is explained at
this page:

http://www.mods.dk/mods.php3?radio=radio_shack&model=pro-2006&selectid=896#896

At WFM there was a good improvement. Much better sound quality.

At NFM and AM there is minor improvement... I think. But when there is no
signal (squelch closed) I hear a pretty loud background hizz from the speaker
that I don't like.

I'm not sure if that's the backside of the mod, or if I made some mistake.

Anyone with experience on this subject... please post your comments!

Should I pay extra attention to any of the components in the mod? Your hints
are most welcome...

By the way, I listen to AM at 90% of the time, so a good audio quality at AM
is my highest priority.

Regards,

Mackan

Oh my god. where is everyone from. ALL digital phones still have the default analog signal built in. I have not seen one digital phone that has the analog removed. If you are on the fringe of a digital site. You automatically go to analog if there is no digital site near by. This is especially true in canada. Same as if you are in a mall. if your phone is having a hard time getting a digital signal. it will automatically go back to analog. This is true for FIDO, Telus and Rogers.

I would never have done that mod, a buddy did it and sure it sounded
better but there was some noise in the speaker while it was scanning but
the worst part was and I don't have that great of hearing but when it
stopped on a channel that had CTCSS on it, or as some call it
sub-audiable tone I could here it and so could he, it was very annoying
to the point that he undid the mod.

hmm. so you are saying that when I travel. That cell site here in canada. In the middle of nowhere is digital. I am sorry to say. This site in the middle of nowhere is still analog 800. Due to the fact. that it is in the middle of nowhere and digital needs a different handshaking. Next you will say a digital site is the same price as a analog site. A digital site right now for Telus mobility is 30 grand. A analog site is over half as cheap. I am talking about here. In canada. As you see. you are talking about sprint. We DO not have sprint up here. it is either rogers or Mobility. One is TDMA the other is CDMA. I forgot Fido that is GSM. And yes. both the mobility and the rogers AT&T phones that I have that are a tri bander both go on alalog in the fringe area's. Oh well if you don't beleive me. Most of Brititsh Columbia is in the Rockies. Oh. I forgot you are american and is canadian's lie. heck. I even help install some of the repeaters if needed. Not all hams sit on their ass. Most of them are very active in the radio community.

I forgot. we don't obey to the FCC. We have Indistry canada. If in some places we used digital sites. They would not go far. Since a digital site is about half the length of a analog signal. Where 1 analog site is. you need 2 digital sites. Oh well. I forgot. This is a flaming newsgroups where people have to be right all the time.

RS PRO-2006 scanner for sale. Excellent condition (1 owner) with manual and original box. The date code is 1A4. $225 plus shipping from 92083.

Accept USPS Money order, cashier's check or personal check (must clear before shipping). Please reply via email to Frank at FrankL@cox.net with questions.

Thanks for reading.

3702. PRO-2004 reception problem

Newsgroup: rec.radio.scanner
Date: 2002-10-17 21:49:43 UTC
From: daveaust@pol.net
Message-ID: <225774bd.0210171349.54adb7f0@posting.google.com>
Source record: 42840
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I picked up a pro-2004 that powers up, programs, scans, and appears to be functionally intact via display and keypad except has no reception roughly in 450 Mhz range and has low sensitivity in a few other band areas like 146 Mhz 2-meter ham. 162 Mhz barrels in w/o any problems via scan/direct/search. Haven't been able to completely test all other reception ranges but appear to be less than sharp at best. Wondering if possible alignment is way out and also which publication might get me alignment/circuit/schem details. It appears to be a cool radio and would like to get it purring if it would be worth it. Any info regarding sources or experts would be appreciated. thanks, daveaust@pol.net.

I remember reading that many of the PRO-2004's needed some of their solder joints re-heated, and cleaned up.

Source record: 42842

Anyone have a list of currently active frequencies used at the Selfridge Air National Guard Base, Macomb County, Michigan?

My Daryll Symington, 14th Edition, directory list several, however, it also states they recently migrated some operations from VHF-high to UHF, in the 406~420MHz area. In addition to that, they have re-built the runways. With all that's going on these days, I expect this air base to spring back to life, and make for some interesting monitoring!

Thanks in advance for any info!

Bill Crocker

I just went and read the mod. My guess is that the designers knew exactly what they were doing with the choices they made of those caps. I hear no PL tones on my unmodified scanner, and if audio response is brought down to where you can use PL decoders for the 50hz tones, then you are also going to be able to hear the 60hz running through the power supply transformer. If you run 12vdc through the connector on the rear panel instead of using the 110vac cord to power the unit you will most likely get rid of most of the background hiss. If your plans are to use a PL decoder, then use your computer to filter the sound card output back upto the 300hz cutoff and listen through your computer.

Just bought the PRO-95 yesterday !!! RS sold me a cd and cable for less
than $20 but the darn thing doesn't seem to support the PRO-95. Went back
today to talk to the local RS manager but he was no help....he has called
the problem into his support group for an answer/solution. The
configuration for this software does list the PRO 93 or 95. Just some
older models ! I don't think this is going to work. Plus it is a one way
download from PC to scanner ONLY !!!!! NOT WHAT I AM LOOKING FOR......

This freeware (Win05) LOOKS GOOD but what about a two way cable ??? Any
sources for the proper cable ????

That area of the schematic is pretty poor. When I get a chance I will scan it and see how it looks. I don't have much hope in it turning out very readable though.

According to the block diagram, Q1 (2SC3128) is the UHF RF Amp, Q2 (2SC3704) is the UHF Mixer and Q3 (2SC3121) is designated "X3". Can't read any voltages on the transistors, but I can see that the RF signal input to Q1 is on the emitter. A 47K connects to the base and the collector goes to L2. There are a couple of diodes in the circuit, but my guess would be the rf amp is bad. Also, Q1 is on the top side of the board, near the "800 mhz unit", right between L1 and L2. Q2 and Q3 are smd type and are on the bottom side of the board.

I am looking for a schematic for a Bearcat 70 xlt....if you happen to know where I might find one.

Good luck. Let me know how you come out.

Mac

You were so right! I thought it was the modem, but it is the monitor
only. I am using rg-8u mini foam. I don't know what I will do yet.
At least when I am not using my computer I can shut the monitor off.
I do like to have the scanner going when I am on the computer. Any
other suggestions are welcome. Thanks for your help! Jon.

k. Now if you try to change the refresh rate of the monitor. you may get
less RFI from the monitor. Do you use a BNC connector. if you do. did you
make it yourself. If any of the strands from the shield are hanging out. you
may get RFI there. I have a BNC connetor to a so-239 connector. from there.
I have it hooked up to the pl-259. I haven't had RFI since. Is your coax
longer then 100 ft. um. Is your coax running near the monitor or the monitor
wires. Is the coax or the radio close to your video card. But all in all.
Try changing the refresh rate. You may still get some RFI. but. set it to
where your frequencies you like are not getting interference. Other
frequencies may get the RFI then. You may just eliminate it all too that
way. good luck.

Cellphone tower triangulation. It's pretty common, and required at some
point in time by all carriers. It's solved a bit of the problem of
anonymous 911 cell callers calling in ficticious calls.

The GPS is built into the hand held and sends exact coordinance to a map at dispatch every few seconds. A friend of mine works with the RCMP and has been using one of the HT for a few months. He can't believe how technical the radio is. If you remove the battery the radio has to be reprogrammed from dispatch with the correct codes in order to work and if he forgets to turn in his radio at the end of shift dispatch just shuts it down until he turns it in and they reactivate it.

Hi!

Thanks for your reply.

I undid the mod. The background hizz is still there... aaarrrh! I guess I
must have broken something else on the board. There is nothing to be seen
with my bare eyes, maybe some nearby component got overheated.... :(

The hizz appears only at FM and AM. WFM is just fine.

The low level tape output is also just fine on all modes, so the failure
must be around the final audio amplifier (my wild guess).

Any 2006 service personel reading this post? What could be destroyed? Any
hints?

I have an UBC 780XLT on the way home now... I hope I'll love that one as much
as I love(ed) my 2006.

Take care,
Mackan

Be advised that Steven A. Giron, AD6GO, and EXTRA class radio amateur, (so much for the integrity of this hobby), entered into an agreement with me to sell some radio equipment for an agreed price. I promptly sent him a PAYPAL payment.

Since that time, he has not responded to the receipt of the money, nor has he answered my numerous e-mail inquiries on this matter. Of course, to date the equipment has not been received.

Steve is listed as residing at 11609 Nova Street, Santa Fe Springs, CA 90670. He did not provide a telephone number, nor is there one listed for him.

I will take the necessary steps with PAYPAL in an attempt to retrieve my money, but this is not gauranteed.

I have been buying and selling on the groups and eBay for many years, and am usually very cautious, and to date, after hundreds of transactions, have never been burned - until now.
I dealt with Steve in the past, and he was fine. Also, I always thought that being an EXTRA class ham included some integrity as well. I guess not. Additionally, his eBay feedback is good except for two neutral ratings relative to his lack of communication. So much for eBay feedback.

This is a warning NOT to deal with Steve. If anyone knows Steve, or can contact him on my behalf, I would like to speak with him on this matter.

Dan

3725. No Digital Scanners This Year....

Newsgroup: rec.radio.scanner

Dan:

Sorry to hear about the rip-off! Ebay has had a LOT of legal pressure put on them for taking fraud too lightly in recent months. Perhaps the timing is right to turn the heat up on them. Also, when you register with Ebay, you are required to give a phone number, and they are supposed to confirm it. Check Ebay, they have a link where you can have the user's profile info e-mailed to you. Of course when you do this, they advise him, and also e-mail him your info, which he probably already has. Maybe when he receives this notification, he'll do what's right.

Also, PayPal would have even more ways to track him! If the money is substantial, contact the local police where he lives...give them his address.

Let us know how it goes.

I have known and done business with Mr. Giron for many years. He has
always been a "straight shooter" and as far as I am concerned his integrity
is beyond reproach. You failed to include any details in your original post

such as when did you make the purchase, how long has it been since you sent the payment, etc. However...

Mr. Giron is an advanced systems engineer for a major computer company and as such he is subject to being called out of town at a moments notice (24x7) for emergency cases. In fact, he has been out of state for the past week on such a call. I'm sure that when he returns you will be contacted regarding this matter. If not, send me a private e-mail and I'll give him a call on your behalf.

There is SOOO much wrong in this post, I will have to point all of it out...

> Be advised that Steven A. Giron, AD6GO,

Whenever you post a callsign, you are giving out all this info along with it...
Callsign:

STEVEN A GIRON
11XXX NXXX
SXXXX XX XXXXXXX, CA 9XXXX
FRN: 000382XXXX
Previously: KF6KWQ
Email: kf6XXX@XXX.XXX

Which brings up the other mistake of attaching your home address to your ham license info.

> and EXTRA class radio amateur, (so
> much for the integrity of this hobby)

The fact that they MADE different classes instead of all being equal showed what snobs the hobby consisted of to beging with. "I'm an Extra, WHAT? You are only a no-code tech? You are a lazy son of a bitch and am not as good of a ham as I am, etc. etc."

> , entered into an agreement with me to
> sell some radio equipment for an agreed price. I promptly sent him a PAYPAL
> payment.

Who the hell would use PAYPAL after all the problems that have been reported in the news about it?!
http://www.paypalwarning.com

> Since that time, he has not responded to the receipt of the money, nor has
> he answered my numerous e-mail inquiries on this matter. Of course, to date
> the equipment has not been received.

So posting on newsgroups with all his personal info is going to somehow correct this problem?

> Steve is listed as residing at XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX.
> He did not provide a telephone number, nor is there one listed for
> him.

Sure there is, you just don't know how to use the internet to find it. I found yours, and see that you moved.

> I will take the necessary steps with PAYPAL in an attempt to retrieve my
> money, but this is not gauranteed.

LOL! ROTFL!
http://www.paypalwarning.com

> I dealt with Steve in the past, and he was fine.

Then perhaps he had a heart attack, although at 31 that would be unlikely, or a family emergency and was unable to get back to you yet. Perhaps his internet provider cut off their customer's service for a few weeks during an "equipment upgrade" like they always do. The fact that he has been good to deal with in the past, would make me think something bad happened to him or something.

> Also, I always thought
> that being an EXTRA class ham included some integrity as well.

Just the opposite in many cases. As an Extra, you can't go on any other bands that you can't access as a General class. The only difference is that you get to use a special private section of each of those bands that General class can not use, even though they are technically authorized to operate on the same bands and need to know the same things as they are allowed to use all the same bands as an Extra can. This is no more than belonging to an exclusive club and seem more important than the rest of the people in the hobby. Like if a fishing club had special parts around a lake reserved for Extra-special fisherman from the other LOWER-CLASS fishermen.

> I guess not.

If you would have just thought about it, you would have figured out the differences a long time ago.

> Additionally, his eBay feedback is good except for two neutral ratings
> relative to his lack of communication. So much for eBay feedback.

Even YOU said he was good to deal with, because he was. How sad if you destroy his feedback and do all this to him on the newsgroups because of something you will later find out was a tragedy he could not avoid.

> This is a warning NOT to deal with Steve. If anyone knows Steve, or can
> contact him on my behalf, I would like to speak with him on this matter.

After seeing this, I am sure he will want to speak to you too.

Perhaps he will post all of your info here for all to read after he explains that his mother died or something to that effect and was unable to contact you. (Since you too allow all your info to be easily obtained via the internet.) Perhaps he died in an auto accident. Wouldn't you feel stupid then.

I suspect what REALLY happened is that Paypal fucked you over like they do with everyone, and poor Steve is wondering why he hasn't received any money from you yet. That is the most likely thing that happened knowing about Paypal as well as I do.

Bill,

This was not an eBay transaction, but as I said, I paid him using PAYPAL.

I still had some faith in doing a deal from a newsgroup ad, as we did many years ago before eBay. Once again, more evidence as to why all the sales have gone to eBay.

I'm so thankful that the HAM radio laws are being rewritten.
That way the old farts who didn't have anything better to do back
when they grew up because of a lack of computers, education, work,
or even simple TV leaves people with very little to do, so people back
then found it much easier to sit down and learn worthless crap such as morse code
and about vacuum tubes. Now life is alot more complex. MUCH MORE COMPLEX and people
find such nonsense such as morse code as exactly that, nonsense. If I'm in danger,
I'll get on the cell phone faster thanI can grab a ham. If the cell is out, the internet,
if the internet is out, I'll grab a cop. If I can't grab a cop then I can grab just anyone.
Ham RADIO people make it sound like they are so important. Not anymore. There was a time
that you could see tons of HAM's on the street. Now you can't find them anymore when you
look for them. Why? Because like I said, life is much more complicated than it was when
HAM was becoming a several decades long fad and people didn't have anything else worth
learning
so it was quite simple. Same with out outdated educational system. Our education system
works
on the same principle that children's lives are simple and they have nothing better to do
than
get an education when we now know that children's lives are much more complex with divorce,
child
abuse and sexual abuse, latchkey kids, all that. It's amazing how children, except those
with perfect,
very boring lives, make it at all as the systems are not setup to take into consideration
that the world
is going to hell in a handbasket and most kids are freaked out and halfway insane already
by the time they
enter the first grade because they feel the world crushing in on them already from their
parent's divorces
or their uncles raping them or whatever. That is real life in this modern time.
Anyhow, now people just don't have the time to learn HAM radio on average. Those with the
time are just lucky,
it doesn't mean they are elite like the cocky SOB's act on HAM radio. The whole HAM radio
laws should be renewed.
Completely eliminate the code and match the level of complication to the same environment
ease it was back in the
old days when all these farts were getting their licenses. In other words, today, you don't
even homebrew, you just
do board level repair so on that note, our PC knowledge could apply. All we need now is
basic radio knowledge and enough
skill not to kill or give ourselves cancer from RF radiation and that's it. Either that or
HAM is going to be completely
dead once all the old farts die of cancer or heart attacks. There isn't a damned day when I
don't get on the radio and

hear of at least 5 hams who have overnight, upped and croaked. It's amazing how one night they are on HAM, the next night
they are getting buried. My point is, the world will run out of these old farts and HAM will then be dead except for a bunch of low ranking people. Why? Because no one has the time nor energy to invest so much in learning things so complicated. Also, radio shouldn't be so complicated. Our computers are much more complicated than Radio's but we learned them perfectly. There is a problem here, the problem is elitist thinking people trying to keep us normal modern people off the air because they are afraid of CB'ers coming in. CB'ers will always not get to be on HAM because they will always be too stupid. In the desire to eliminate CB people, HAM's have made the requirements so hard that they exclude everyone except again, the old farts who have too much time on their hands already.

People like you piss me off since if you dig further you will find that he might have died
or was in an accident, or something.

People like YOU who remain annonymous, do not use their real name, blame the VICTIM, and make royal asses of themselves really piss ME off. How would you suggest I DIG a little further, genius?

Most people are not bad people and most people don't
break the laws because they know the shit they will get into. Chances are, you are destroying
this guy's credibility because the poor guy got in a wreck or killed or something.

If that in fact was the case, then I will make all proper and required retractions, but I doubt it.

If he really is ripping you off then yeah, you have every right to do what you are doing
and worse! But I would really question if the guy could be in a real mess right now.

Thanks for your support.

Dan

> the payment, etc. However...

That is not important to this discussion, and it will only provide more
fodder for boobs like "nospam" to go off topic. Suffice to say that I made
an immediate PAYPAL payment, to which he NEVER responded, and the equipment
is over due.

> Mr. Giron is an advanced systems engineer for a major computer company and
> as such he is subject to being called out of town at a moments notice

As such I am sure he has access to a computer and e-mail? A simple e-mail
as to the status of this deal would have prevented my actions here.

>In fact, he has been out of state for the past
> week on such a call.

I do not consider being away on business an excuse for NOT contacting
someone who lived up to his end of a deal and sent prompt payment,
especially a computer engineer.

>I'm sure that when he returns you will be contacted
> regarding this matter.

No good, that was not our agreement. Immediate payment = immediate
shipment.

>If not, send me a private e-mail and I'll give him a
> call on your behalf.

I sent you an e-mail.

Dan

What if a family member that would call you at least once a week did not call you for over a month?
Would you suspect that there might be something wrong with your family member, or would you post that family member's name, address, phone number, etc. on a newsgroup and tell everyone not to ever deal with this person?

> > You failed to include any details in your original post

How are you sure of this? If I am not at my home or work computer, I don't have access to either. Perhaps he doesn't have a lap top either.

> A simple e-mail
> as to the status of this deal would have prevented my actions here.

That's like me saying if you would have answered my phone call to you yesterday when you weren't home, I would not have shot you with a gun.

What if the microphone on the cop's radio breaks? He uses his cell phone.
Cops, firefighters and paramedics don't learn morse code and they deal with emergency communications radios every day! If morse code had ANY value in an emergency, you can be sure that all police, firefighters and paramedics would be required to learn it. The fact that they don't, shows how unimportant it really is.

> complicated than Radio's but we learned them perfectly. There is a problem here, the problem is elitist thinking people trying to keep us normal modern people off the air because they are afraid of CB'ers coming in. CB'ers will always not get to be on HAM because they will always be too stupid.

No, CBer's are smart. They realize that you don't have to learn morse code in order to use frequencies below 6-meters. Anyone can access 11 meters without any license, or having to join a snobbish club.

Hams are afraid of CBer's coming to the ham bands because they use everyday language that is even common around the workplace today, but these old-timers don't work and don't realize that times have changed, as well as the language used. They also don't understand that the only reason the language is any different on Ham bands is because of the requirement to give your call sign every ten minutes so that everyone can know your full name and address so they can report you to the government if they find your statements offensive like good little communists. It is not the morse code that keeps the Ham bands from people speaking freely and uncensored, it is the call sign. Tech Hams didn't need to learn morse code either and you don't hear all sorts of "offensive swear words" on 2 meters either. Why? not because of the code obviously, but because you have to identify with a call sign and all the weirdos that could be listening in on scanners and such can access your private information on the internet as soon as you give your callsign.

CB is much safer. No sicko stalkers or people that go and kill people they hear that say something that they don't like because you don't identify your name and address every fucking 10 minutes!

> In the desire to eliminate CB people, HAM's have made the requirements so hard that they exclude everyone except again, the old farts who have too much time on their hands already.

Imagine if OTHER hobbies acted like this! You can't get a bowling or fishing license unless you first learn how to speak and read Russian first. If you explain that you don't understand why you have to learn Russian first in order to be able to roll a bowling ball or catch a fish, they will explain that you are just too LAZY and that it only takes 15 minutes a day, so get your ass in gear and start learning a language you will never use!

Learning Morse Code so that you can USE A MICROPHONE on HF bands is idiotic. And once again shows the human logic as being below that of the rest of the animal kingdom. Especially since you don't need to learn morse code in order to talk on 11 meters, but you do for 10 meters. This makes no fucking sense at all. They will cry that is because it is international law and there is nothing our country can do about it, everyone has to know code before being allowed to TALK on HF. When in fact they break that very international law by allowing handicapped people to use HF without having to pass a code test! Apparently it is ok to violate international law when they want to.

It's not just hams and the FCC. MOST humans are idiots. I am ashamed to be part of this idiotic race of idiots.

Of course they do. Because that way you can't post their fucking names, addresses and phone numbers on newsgroups! The fact is, only an IDIOT would use their real name on a newsgroup because of the fact that there are people like you around.

> Most people are not bad people and most people don't

> retractions, but I doubt it.

That's like a rapist apologizing to his victim afterwards. You have done damage that can not be taken back or fixed by a "retraction" or apology.

What if I beat the shit out of you everytime something bad happens to me, and then find out AFTERWARDS if you were responsible or not. If I find out you were not the cause of my problems, then I will apologize for the injuries that I caused to you and that will make everything ok.

What a messed up kid you are. This is why abortion is so necessary today.

I got a realistic pro 2011 20 channel scanner and a radioshack
20-176a scanner antenna, are these two any good and any info would
help. Would putting the scanner 25ft to 30ft be high enough go should
I put it up higher. With the scanner I have can I listen to any
pirate radio & what are some good cb amateur repeater & any other good
scanner frequecnies to listen too in Houston Tx.

Extras don't have any more or less integrity than anyone else.

An Extra class license is a lot like winning the blue ribbon in the FFA
or a scout merit badge. All it shows is that you put out some effort
in an area where there's an organization set up to recognize such effort.
It's just something you choose to do...or not...nobody is twisting your arm.

Just 'cause I could copy code at 20wpm, once... doesn't mean that
I'm better than anyone else. I AM better than most, but it ain't
because of the code. ;-)

I presume since this person was a ham, all hams are bad to deal with?

That's like me saying that a guy named Dan ripped me off, does that make all Dan's rip off artists.

Keep blasting the hams and "OUR" hobby, your the one that seems to have a problem. Your mixing a financial deal with a persons hobby and your wrong. One has nothing to do with the other.

Dan, you are a real lamer, and apparently, clueless. You havent even bothered to write the guy or telephone him and you are posting this drivel. Eight months ago a major internet provider went bankrupt and the folks at E-Gay had to spend a ton of effort removing derogatory input from turds like you who were either incapable or too lazy to follow-up through other channels.

I didn't know that they had vacuum tube technology in the question pools. I got my Advanced Class license back in 1986 or so, and these things weren't on the test back then. As for the code.....it's a piece of cake. I had no problem working up to 25 WPM after 2 months of practice. Does it make me any better than folks who didn't learn the code? No, folks are intrinsicly valuable; their self-worth is not contigent on what they know, or what they do for a living. We can thank Popular Culture for that hogwash! Now, back to the code.....the problem is that most folks try to write down what they are hearing, during the learning process. Eliminating that extra step makes it much easier to learn the code. Do I use it? Nah!
As far as being useless? I don't think so. Computers being more complicated? I doubt it. If we ever have a world disaster, a CW transmitter is the easiest thing to build. Hopefully, that won't happen!

yep. Hmm. They say we are useless. If I remeber right. The last forest fire we had. We were the only communications for a town about 200 or more Km away. We were the communications for the evactuation and standard comms for others. all the other repeaters. Cell, Fire, Ambulance, Repeater. All burnt up. Since our repeaters were more powerful then the local ones + they were on a different mountain. We were the only ones that could communicate far distances into that town. Remember. Commercial repeaters are only allowed so much wattage per area that the frequency is bought for. CB, ya right. they could and would never help another soul like US hams ever have. Yay. When 11 meter propagation is at a low. How will you communicate in a emergency ?? I wish you would explain how CB is better then amateur radio. Ya. Lots of hams lately around here are stuck up. But. Some aren't

One of these days, you will grow up and pull your head out of your butt.
"nospam" <nospam@nospam.nospam> wrote in message
news:4oZr9.179$Mu4.103@nwrddc01.gnilink.net...
I'm so thankful that the HAM radio laws are being rewritten.
That way the old farts who didn't have anything better to do back
when they grew up because of a lack of computers, education, work,
or even simple TV leaves people with very little to do, so people back
then found it much easier to sit down and learn worthless crap such as morse
code
and about vacuum tubes. Now life is alot more complex. MUCH MORE COMPLEX and
people
find such nonsense such as morse code as exactly that, nonsense. If I'm in
danger,
I'll get on the cell phone faster thanI can grab a ham. If the cell is out,
the internet,
if the internet is out, I'll grab a cop. If I can't grab a cop then I can
grab just anyone.
Ham RADIO people make it sound like they are so important. Not anymore.
There was a time
that you could see tons of HAM's on the street. Now you can't find them
anymore when you
look for them. Why? Because like I said, life is much more complicated than
it was when
HAM was becoming a several decades long fad and people didn't have anything
else worth learning
so it was quite simple. Same with out outdated educational system. Our
education system works
on the same principle that children's lives are simple and they have nothing
better to do than
get an education when we now know that children's lives are much more
complex with divorce, child
abuse and sexual abuse, latchkey kids, all that. It's amazing how children,
except those with perfect,
very boring lives, make it at all as the systems are not setup to take into
consideration that the world
is going to hell in a handbasket and most kids are freaked out and halfway
insane already by the time they
enter the first grade because they feel the world crushing in on them
already from their parent's divorces
or their uncles raping them or whatever. That is real life in this modern
time.
Anyhow, now people just don't have the time to learn HAM radio on average.
Those with the time are just lucky,

it doesn't mean they are elite like the cocky SOB's act on HAM radio. The whole HAM radio laws should be renewed.
Completely eliminate the code and match the level of complication to the same environment ease it was back in the
old days when all these farts were getting their licenses. In other words, today, you don't even homebrew, you just
do board level repair so on that note, our PC knowledge could apply. All we need now is basic radio knowledge and enough
skill not to kill or give ourselves cancer from RF radiation and that's it. Either that or HAM is going to be completely
dead once all the old farts die of cancer or heart attacks. There isn't a damned day when I don't get on the radio and
hear of at least 5 hams who have overnight, upped and croaked. It's amazing how one night they are on HAM, the next night
they are getting buried. My point is, the world will run out of these old farts and HAM will then be dead except for a bunch of low ranking people. Why? Because no one has the time nor energy to invest so much in learning things so complicated. Also, radio shouldn't be so complicated. Our computers are much more complicated than Radio's but we learned them perfectly. There is a problem here, the problem is elitist thinking people trying to keep us normal modern people off the air because they are afraid of CB'ers coming in. CB'ers will always not get to be on HAM because they will always be too stupid. In the desire to eliminate CB people, HAM's have made the requirements so hard that they exclude everyone except again, the old farts who have too much time on their hands already.

It has been 8 days since th PAYPAL payment, without a response to the
payment, ot to my follow-up e-mails. Our agreement was that he would ship
immediately after receiving the payment. He has not. Does that rise to the
level of thief? Maybe not. Is his word any good? No. Is that someone YOU
would want to send YOUR money to?

> > if the internet is out, I'll grab a cop.
>
> What if the microphone on the cop's radio breaks? He uses his cell phone.
> Cops, firefighters and paramedics don't learn morse code and they deal with emergency communications radios every day! If morse code had ANY value in an emergency, you can be sure that all police, firefighters and paramedics would be required to learn it. The fact that they don't, shows how unimportant it really is.
>
> > complicated than Radio's but we learned them perfectly. There is a problem here, the problem is elitist thinking people trying to keep us normal modern people off the air because they are afraid of CB'ers coming in. CB'ers will always not get to be on HAM because they will always be too stupid.
>
> No, CBer's are smart. They realize that you don't have to learn morse code in order to use frequencies below 6-meters. Anyone can access 11 meters without any license, or having to join a snobbish club.
>
> Hams are afraid of CBer's coming to the ham bands because they use everyday language that is even common around the workplace today, but these old-timers don't work and don't realize that times have changed, as well as the language used. They also don't understand that the only reason the language is any different on Ham bands is because of the requirement to give your call sign every ten minutes so that everyone can know your full name and address so they can report you to the government if they find your statements offensive like good little communists. It is not the morse code that keeps the Ham bands from people speaking freely and uncensored, it is the call sign. Tech Hams didn't need to learn morse code either and you don't hear all sorts of "offensive swear words"
> on 2 meters either. Why? not because of the code obviously, but because you have to identify with a call sign and all the weirdos that could be listening in on scanners and such can access your private information on

the internet as soon as you give your callsign.
>
> CB is much safer. No sicko stalkers or people that go and kill people they hear that say something that they don't like because you don't identify your name and address every fucking 10 minutes!
>
> > In the desire to eliminate CB people, HAM's have made the requirements so hard that they exclude everyone except again, the old farts who have too much time on their hands already.
>
> Imagine if OTHER hobbies acted like this! You can't get a bowling or fishing license unless you first learn how to speak and read Russian first. If you explain that you don't understand why you have to learn Russian first in order to be able to roll a bowling ball or catch a fish, they will explain that you are just too LAZY and that it only takes 15 minutes a day, so get your ass in gear and start learning a language you will never use!
>
> Learning Morse Code so that you can USE A MICROPHONE on HF bands is idiotic. And once again shows the human logic as being below that of the rest of the animal kingdom. Especially since you don't need to learn morse code in order to talk on 11 meters, but you do for 10 meters. This makes no fucking sense at all. They will cry that is because it is international law and there is nothing our country can do about it, everyone has to know code before being allowed to TALK on HF. When in fact they break that very international law by allowing handicapped people to use HF without having to pass a code test! Apparently it is ok to violate international law when they want to.
>
> It's not just hams and the FCC. MOST humans are idiots. I am ashamed to be part of this idiotic race of idiots.

People like me? Care to explain? If a person has nothing to hide, no need
to worry about people like me....People like YOU should take care in the use
of vulgarities in a public forum where youngsters may be present.

> That's like a rapist apologizing to his victim afterwards. You have done
> damage that can not be taken back or fixed by a "retraction" or apology.

Once again, your analogy is horrific to the point of hysterical. Think
about what you said.
We are assuming A. there was a rapist, and B. there was a victim, and C. the
rape took place. Of course, under those conditions an apology would be
useless. I never said I would apologize, just retract my statements. Learn
to read.

> What if I beat the shit out of you everytime something bad happens to me,
and
> then find out AFTERWARDS if you were responsible or not. If I find out
you
> were not the cause of my problems, then I will apologize for the injuries
that I
> caused to you and that will make everything ok.

Another foolish statement. We are not talking about physical violence
here, my friend, although that seems to be where you mind and mouth are most
comfortable.

> What a messed up kid you are. This is why abortion is so necessary
today.

I am NOT a kid, pal. Your vulgar, hurtful statements to someone who was the
victim here speaks volumes about you.

wrong. One
> has nothing to do with the other.

Well, yes it does. The amateur radio hobby is a fraternity. Most hams feel
comfortable dealing with other hams as a result. An EXTRA class ham even
more so, in my opinion.
I simply felt that it was against the teachings of "our" hobby to conduct
business between two hams in the manner. Thats all.

Can somebody please explain the useage of the Toronto pearson Airport arrivals frequencies ?

I know that 118.35 is the south tower (handling runways 24L and 06R) and 118.7 is the north tower (handling runways 23 and 05) but 132.8 and 124.475 are both arrivals and seem to do the same job. In fact, to make it more confusing, the controller at 132.8 will sometimes pass aircraft off to 124.475. 132.8 does seem to be the busiest though.

Thanks.

People tend not to realize that sometimes ALL the bands are dead. There are times when you cannot get phone communications through. I have seen these times. When you could not even hear a phone transmission, you can copy CW. CW may seem a waste to some people, but in some circumstances, it can be the ONLY way to communicate!

That's because Nospam is spending all of his time annoying people in the amateur, home theater and pinball newsgroups. Where would he find the time to study?

The Ontario Unlisted Frequency Guide is dedicated to scanner radio hobbists. On here you will find lists of Ontario radio frequencies that are not listed on any web page, published in any scannner book (Haruteq or Scantrix) or listed in the government frequency list (Industry Canada's TAFL). The Ontario Frequency Guide mailing list (oufg) is for scanner radio hobbyists so they have a public forum to be able to chit chat with each other about anything relating to the radio scanner hobby in Ontario as well you will be able to recieve updates of what changes I have made to the Ontario Unlisted Frequency Guide web pages.

And I've seen times when you couldn't copy CW to save your life but a
PSK31 signal was error free copy... So there goes the morse code
theory again if the digital modes make it through better.

Can't be done, it is encrypted digital and the owner of the system can and
does change the codes multiple times daily as well the voice and data
streams are mixed so the scanner would have to separate the data from things
like the GPS, MDT and the voice stream.

Emergency Situation Report e-mail list for Pennsylvanians

PA-SitRep is a free, 100% non-commercial,
nonprofit, e-mail list and web site.

The PA-SitRep emergency traffic e-mail list is a
tool that will enable you to monitor and report on
major emergency situations throughout the State
of Pennsylvania including weather emergencies,
natural disasters, environmental disasters, civil
disturbances and threats of terrorism, major fires,
and manhunts.

Subscribers are encouraged to utilize their home,
work and cell phone e-mail addresses for receiving
messages from the PA-SitRep e-mail list.

Because messages posted to the list are limitted to
situation reports of MAJOR emergency situations
within the State of PA, message volume on
PA-SitRep is EXTREMELY low.

PA-SitRep is also building a list of PA-SitRep
Contacts, most of whom (25 so far) are Amateur Radio
Operators (http://www.pa-sitrep.com/contact.htm).

PA-SitRep Contacts monitor our higher volume
SitRep/Discussion mail list and post situation
reports ot the discussion list and to the main list.
PA-SitRep Contacts also submit their contact info
for our site and may be contacted for a first
hand situation report should an emergency
situation arise in their area.

Please visit the site to learn more:

http://www.pa-sitrep.com/pasitrep.htm

Thanks. We'll look forward to your participation.

-David Kleber, KB3FXI
PA-SitRep List Owner and PA-SitRep.com Founder

Source record: 42774

o Whom It May Concern:

Our Cub Scout Pack in Lynchburg, VA is looking for a donation of commercial grade radio equipment for use at our district camp outs and other events. The radios we are looking for would need to be compatible with radios that our district has for the camp staff. I am writing to you to ask for your assistance in helping us reach this goal by donating any radios, batteries, and chargers that you may be able to. We are in need of the following equipment:

- Five to Ten Handheld VHF Radios
- One extra battery per radio
- One charger per radio
- Programming equipment and software for the radios

If you are able to help us with any or all of the above equipment please contact me by email at Morgan.Allen@Vascouting.org. Please understand that all donations are tax deductible and that these radios will greatly benefit the cub scouting program in our area by allowing our staff and packs to remain in constant communication at the events and also to insure a speedy response in emergency situations.

Thank You Very Much,

Morgan Allen
Cub Scout Pack 24

From: Len Beecroft <lbeecroft8041@rogers.com>
Message-ID: <Ches9.17832$Q3S.479@news01.bloor.is.net.cable.rogers.com>
Source record: 42776

Hi all,

I have the Alinco DJ-X3 T/E Wide Band Communication Reciever, I can get police, ambulance, fire frequencies on it just fine. Sometimes I get taxi's and public transportation inspectors (T.T.C. Toronto Transit Commission).

I'm not understanding why I can't get aircraft frequencies, it's set to pick them up?.

I can pick up everything except the air frequencies.

Anyway what am I doing wrong with it?.

I await your comments and I do thank you for your help.
(Yes I read the Instruction Manual).

Alinco's web-site is no help to be as i live in Toronto,Ontario Canada.

Programming cable for the DJ-X3 T/E is $65.00 here you can get them at radio world.

Anyway thank you for the help, I'll go through the manual again.

3787. Re: I have an Alinco DJ-X3 T/E

Newsgroup: rec.radio.scanner

Message-ID: <UHes9.534$z5.418516@newssvr28.news.prodigy.com>
Source record: 42777

You probably already know this, but if not, aircraft communications are (for the most part), in AM mode, not FM, or NFM. Most scanners default to this mode, when within the aircraft frequency range. However, many of the newer, or high-end scanners, allow you to override this setting.

That being said, do you have specific aircraft frequencies for your area, or are you just searching randomly, hoping to find some? Aircraft communications are usually very brief, and if you're doing a search, within a range, most likely, you'd be missing them.

I'm curious...what would living in Canada, have to do with Alinco's web site not being of any help? A? :)

Most commercial grade two-way radio equipment requires a license for legal operation. Even GMRS radios require a license, and it's expensive. About the only exception would be the newly authorized MURS channels. They are also usually pretty large, and heavy. Replacement battery packs can be very expensive, as can maintenance, and repair.

Why not just use the very capable, readily available, and very inexpensive, FRS radios? I've seen them go on eBay, brand new, for as little as $15~$20.00/ea! They work very well, and they are rugged, small, light weight, easy to operate, and do not require a license.

Are you trying to lockout a programmed channel, or just the frequency as it's passed, during a search? I don't believe the BCT-7 can lockout given frequencies during a search. However, if you program the frequencies into channels, and then scan, you could lock it out. Better yet, just don't program it into a channel!

In an emergency, you do not want to contact someone in a different country, they can't help you. Morse Code is of NO VALUE in an emergency or else Police, Fire, and Paramedics would be REQUIRED to learn it. Doesn't it seem odd that they are NOT required to know morse code, yet people in a HOBBY are? SURE it seems odd. Because it is odd.

Also, in an emergency, you want as MANY PEOPLE AS POSSIBLE to hear and UNDERSTAND the call for help, not just the ONE PERSON in another country who happens to understand morse code! To most people, all they hear are some beep tones and do not know it is a call for help.

If morse code had ANY purpose in an emergency or could help in just ONE way, Police officers, Fire fighters, and Paramedics would be required to learn it. They seem to be able to get through on THEIR BANDS with voice just fine.

Something to THINK about.

> I'm a firefighter/paramedic, and I know morse. :)

But if the dispatcher doesn't, it doesn't do any good.

Plus in an emergency, you want to get vital info out quickly, not send the message out in a CODE spelling out each word letter by letter so someone can die before the info ever gets decoded on the other end.

Read the below again, which you are supposed to READ before replying to. It says that you are not REQUIRED to know morse code to perform your job, it does not say that there isn't one asshole out there that does know it.

Youngsters don't have any problems with "vulgarities". They use them on the school playgrounds every fucking day. It is only adults that can be "offended" by words. Children still have not gone through enough brainwashing by society to LEARN yet that you are supposed to be "offended" by words that are in the dictionary.

> Does anyone have one, i would like to know
> what they think before i buy one.
>
Just purchased one a few weeks ago. Got it from www.gigaparts.com for $309 with free shipping - best deal I was able to find on the web! It is my second scanner. My first is a used 1994 era Radio Shack Pro-2036 / Uniden BearCat 890XLT.

Complaints about the IC-R3 I have heard from other people cover things like difficulty in learning the user interface, the lack of ANY coverage between 816-902 MHz, a lack of sensitivity at the higher end (~2GHz) where the Amateur TV stuff is, the long time it takes to re-charge the battery with the included charger and inability to run the color display/TV while charging, short battery life with color display/TV on, marginal included antenna, . . .

I am very happy so far - a big step up in technology from the old scanner. The user interface does take some time getting used to but I think that reflects the complexity and capabilities of the device - you only have a half a dozen buttons (no numeric keypad) and one dial to do everything! I would have liked at least the public service bands in the middle of the 800MHz range but it really isn't used much out here (I live in a very rural area). Eventually you will probably want a better charger (I found a 6VDC 1A Sony adapter that will work with some of my other equipment) or the Icom table top charger so that you can charge the unit AND run the color display simultaneously. I am looking into getting a better antenna right now - might actually get a few to cover the different ranges I listen on.

Some of the hard-core scanner types seem to think the IC-R3 is more of a gadget than a tool, but I find it a good all-in-one unit for me. It covers AM and FM radio, broadcast TV, weather radio, and almost all of the other bands you would want to scan (cellular blocked). It is very portable and the battery life when NOT using the color display is quite good. It may not have all of the features and programmability of some of the top notch scanners but it does have some novel features and extensive capabilities that

make it a good choice for the average Joe.

For a more thorough evaluation, you might also

I hesitate to contribute to this fray because I don't relish being flamed or lambasted with derogatory attacks on one's character that seems to typify so much of the correspondence in Newsgroups. However, here goes an ethical analysis and re-wording of Dan's message.

If I understand the sequence, Dan transmitted payment to Steve on or about Oct 10 through PayPal. Since then he has received neither the goods nor replies to repeated e-mails and has hit a deadend tracing Steve's address and phone number via his callsign. So he has good reason to be concerned that he may have lost both his money and the goods he agreed to buy.

In the interest of protecting others and in trying to trace Steve, he posts his 'BAD GUY ALERT' on Oct. 18. In that message, he links ethical behaviour with ham radio and higher ethical behaviour with the Extra class certification. The responses explode in various directions but one respondent knows Steve and states that he has been away for a week. Others say that there may be mitigating circumstances, that Dan should be more patient and that he should apologise if that is the case. Other threads spin off into debates about ham radio licensing requirements, Morse code, etc. Much verbal abuse is slung at Dan and among others. He commits to informing the Newsgroups how the deal turns out, to retracting his statements but not apologising to Steve should the deal go through with a reasonable explanation for the delay and lack of communication from Steve.

From an ethical point of view:
1. Should Dan have posted this message?
2. Does it slander Steve?
3. Does it slander others?
4. Should he have waited longer? Did he rush to judgement?
5. If Steve honours the deal and provides a reasonable explanation for the delay and lack of response, should Dan apologise to Steve through the Newsgroups?

In my view, Dan was premature with the judgemental elements of this message but the plea for help in tracking down Steve was entirely appropriate and timely; after all, he had had prompt and satisfactory dealings with him in the past. The title is over the top. Should there be a reasonable explanation for the delay, I think he should apologise for calling Steve a "BAD GUY" and for implying that Steve acted in bad faith - "never been burned - until now", "warning NOT to deal with Steve". Retraction alone is not sufficient; indeed, Steve may have legal grounds to sue Dan. Should Dan find otherwise, then no retraction or apology to Steve is warranted.

Dan's linkage of higher ethical standards than might be expected from the general population with a person's hobby or a technical certificate seems to

me to be without foundation - except where the certification contains such ethical requirements. I'm not familiar with the Extra class ham radio requirements but doubt there is any test or oath on ethics. The word 'ethics' is not indexed in the ARRL Handbook although under the paragraph entitled "Hams as World Citizens" it says, "it's a good idea to avoid sensitive political or ethical issues". Many hams are public-spirited and have virtuous ethical behaviour - some are bad apples. Dan should not have made the generalisation - his message would be better without it and it would not have elicited the spurious debate that distracts from his central concern. I don't think he has to apologise to hams for having held them in higher esteem and is now disappointed.

So here's a suggestion for how Dan might have put his first message that would be ethically appropriate for the situation. It is slanderous to no-one, is factual, and any reader can infer that they should be cautious if they are currently dealing with Steve.

<begin>
Subject: HELP - UNDELIVERED! Where's Steven A. Giron AD6GO?

Steven A. Giron, AD6GO, entered into an agreement to sell me some radio equipment for an agreed price. I promptly sent him a PAYPAL payment on Oct. 10.

Since that time, the equipment has not been received, nor has he answered my numerous e-mail inquiries on this matter. I have been buying and selling on the groups and eBay for many years, and am usually very cautious, and to date, after hundreds of transactions, have never been burned. I dealt with Steve in the past, and he was fine.

Steve is listed as residing at 11609 Nova Street, Santa Fe Springs, CA 90670. He did not provide a telephone number, nor is there one listed for him. If anyone knows Steve, or can contact him on my behalf, I would like to speak with him on this matter.

Dan
<end>

Regards,

Tom

Yea, but who was copying the code? Was he/she any good? I've heard about the PSK vs CW comparisons before I even started working PSK, but after using PSK, I don't really agree. I've found to copy a PSK signal, it has to actually be heard on the receiver. It doesn't work either, if the signal is so weak you can't hear it. Myself, I think it's about even. "I" can copy code that is every bit as weak as the weakest workable PSK signal. Maybe not everyone can, but I can. If I had to choose between the two to get a message through, it would be a toss. I'd probably go with cw. My brain has the advantage of not needing any hardware hooked up. So it can be used on any rig, at any time on any freq. I do have to say though, PSK is a good bit better at weak signal copy than rtty. Note the VLF bands where they are working "really" weak signals. Do they use PSK? Not hardly...They are using very slow morse, and then using puter programs to try to pick out the variations in noise. Also check out moonbounce. It's also very weak signal, and morse is commonly used. Haven't heard much yet about EME PSK31. But I'm not the average SWL as far as morse. I started in the 8th grade, and have had 30 + years of practice, and I peaked out at about 55-60 wpm. I'm now slowing back down again due to lack of practice, but I'm still good for 40 wpm any day. My brain picks out weak morse as well or better than my puter picks out PSK31. But like I said, not everyone is capable of this. Many hams are though. It's not like I'm special or anything. Morse capability is mainly practice, just like anything else. "A lot like typing"... I worked only CW in my first 7 years as a ham. "novice" Didn't even own a mike until I upgraded to general in 1984. MK

Naw ... you just send it as an email attachment.
Should arrive just as fast as the PayPal.

The "tantrum kid" will grow up eventually, but I wonder if he
will ever get over his whining problem. "I want it NOW and
I'll scream and whine and kick until I get it, so there!"

Did I miss the posting with an agreement about shipping terms?
First day air? Overnight? Ground? Buyer pickup?
Maybe they agreed on counter-to-counter.

Ok, now that I found a picture on the web, I see what your talking about.
Does it save the lockouts, if you remove power? If not, possibly you have
an intermittent power connection that is too quick to notice, yet could be
causing you to loose the lockout?

From Radio Shack:

"The tuning range of your PRO-2011 is permanently stored in the microprocessor chip. There's no way it can be extended or altered -- even by a skilled electronics technician. So if you try to enter a frequency not in the PRO-2011's tuning range, you'll get an error message every time."

> And I've seen times when you couldn't copy CW to save your life but
a
> PSK31 signal was error free copy...

Depends on the skill level of the person copying the CW (it was a person, not a computer -right?) and what bandwidth filters he is using. People sometimes think that PSK31 can copy signals so weak that they can't hear them with their ear. The difference is that they are listening to all the noise thru the wide filter while the PSK31 decoder is "listening" thru a very narrow filter. The PSK signal would "sound" much louder (compared to the noise) if you were listening to it after the narrow filter.

there was a bug in the firmware when the unit first came out. I sent
mine in and they fixed it. Perhaps they "forgot" to fix yours!
It has to do with the bear tracker freqs, they could never be locked
out no matter what you did.

I'm the new owner of a Pro 93 and have recently developed a bizzare audio quirk. When scanning, the audio of a busy channel comes up full volume and then "mutes", goes down so far that it can barely be heard. Is this a problem that anyone else has experienced with this scanner? I've checked all the obvious things like good batteries and being exactly on channel. this only occurs when scanning.

Thanks in advance
Paul Spatzek

Only problem with the silly secnario below is that the package was never shipped at all until TODAY, 9 days after submitting a prompt PAYPAL payment, and only after being lambasted here, and a complaint filed with PAYPAL.

Dan

I'm looking for the frequency that transmits a government broadcast
with national standard time. I know I'm calling it by the wrong title.

No Hank...

The agreement was, I pay immediately via PAYPAL, and he ships the next day.
Not too complicated for you is it?

However, as of today, 9 days after this agreement, the item still had not
been shipped.
Am I still the "tantrum kid"? Would YOU tolerate this violation of an
agreement?
Oh sorry, I guess I'm just whining. Big grown up men such as you would have
much much more patience, right?

Dan

I've got one,

I have 3 handhelds and a bench/mobile, and each does something the others do not. I don't think I would like the R3 as my primary scanner, but it is a neat addition to a primary scanner. The large cell gap that is in the USA model is disappointing, but the CTCSS makes it a neat scanner for covering the amateur repeaters. It is the only scanner I have had without a keypad, and the learning curve is slow. So far I haven't found anything other then standard tv for the video portion, but there are hams in the area playing with it.

WT

P.S. I picked mine up used at a very good price. Which helps color my opinion I'm sure.

> and phone number via his callsign. So he has good reason to be concerned
> that he may have lost both his money and the goods he agreed to buy.

Correct We had an agreement that he ship the next day, the 10th, and he did
not. Actually, as of today, 9 days later, he still had not.

> In the interest of protecting others and in trying to trace Steve, he

Tom, you are entitled to your viewpoint, but the history of this matter will show that "BAD GUY" title on the thread was necessary to get Steve's attention in my opinion. Please see the new thread titled UPDATE, which will explain my actions.

Regarding libel, there is NO libel if what is said is true. Once again, read the UPDATE thread and you will see what I mean. BAD GUY ALERTS and GOOD GUY ALERTS are commonly posted on the groups for the benfit of others. In my opinion, based on the way Steve handled this transaction, the BAD GUY moniker, albeit a bit harsh, was appropriate and NOT libelous. Had he NOT conducted himself poorly, and I simply made this all up, labelling him a BAD GUY, then he MAY have a cause of action. You are one of the FEW intelligent, and will written fellows here, and your response was excellent, however, in an already overly litigious society, let's not rush to lawsuits for everything. Additionally, you should go back to the law books pertaining to libel and /or slander torts.

> Dan's linkage of higher ethical standards than might be expected from the

> higher esteem and is now disappointed.

I agree Tom, however, it was purely a personal feeling I had towards hams, and felt it factored into my level of trust for Steve. Nothing more, nothing less. I cannot help it if a boatload of anonymous boobs, hell bent on cursing and calling me vulgar names to make a point, decided to turn a simply cautionary warning into a silly ham radio debate.

> So here's a suggestion for how Dan might have put his first message that
> would be ethically appropriate for the situation. It is slanderous to

Tom, very well put, and hindsight is always 20/20 and you make a valid
point. We are all entitled to our opinions, and the 1st ammendment
liberties of the newsgroups still allow us to post as we see fit, as long as
it is truthful. It is quite possible that your version would not have had
the same net effect as mine did, or it just might have. Pure speculation at
this juncture!

Maybe I should have you write my update!

Anyway, thanks for the intelligent input.

> Regards,
>
> Tom
>
Dan

3842. UPDATE - RE: Steve A. Giron

Newsgroup: rec.radio.scanner
Date: 2002-10-20 02:43:29 UTC
From: Dan Conti <dconti@nj.rr.com>
Message-ID: <lLos9.24123$Up6.5328245@twister.nyc.rr.com>
Source record: 42682
Cross-posted to: alt.radio.scanner,rec.radio.scanner,rec.radio.amateur.equipment,rec.radio.shortwave,rec.radio.swap

I will preface my remarks by stating that I am appalled by the venom spewed in my direction by the majority of respondents to the topic of my initial thread here. It was also interesting to note the the majority of these responses were from posters hiding behind the veil of anonymity, using foul language and vulgar name calling.

The purpose of this post is to issue an update in this matter as to squelch further debate. The final chapter will probably not be written until Monday or Tuesday of this week, but this is briefly how it stands right now:

Last night, AFTER my PAYPAL complaint was issued, and the initial post was made here, I received an e-mail from Steve. Coincidence? Did someone from here contact him? I don't know. He stated that he was drawn away suddenly to work on a project at a secure government facility, and has been away all week. He stated that he had NO outside internet access this entire time. He did not specify as to the exact date he was drawn away, or when he returned.

Steve was very apologetic in his response.
Steve stated that he was going to reverse the PAYPAL payment to me, and also ship the equipment today, via overnight mail. All I asked of him was to ship the equipment, and I never asked for the reversal. I do not know why he chose to do that if he was shipping me the radio. He trusted that upon receipt of the radio, I would re-submit the payment to him via PAYPAL.

As of this writing, I have not received the PAYPAL reversal in my PAYPAL account.

Also, I did a US Postal tracking on the number he gave for the overnight, and once again, as of this writing, no record of the shipment.

YES, it is possible that there are delays in both items above.

Anyone contesting the facts above should contact me and I will privately e-mail you his e-mail text and the USPS tracking # he provided.

In my opinion, and that is what the newsgroups are, a bunch of opinions, the BAD GUY title was not excessive. I firmly believe that a deal is a deal, and that not having shipped, 9 days past receiving the money, WITHOUT any contact with the buyer, is BAD GUY performance, in the context in which we use GOOD GUY and BAD GUY alerts here.

Yes, there may have been a reason as to the delay, but unless the government snatched him from his house minutes after receiving my PAYPAL money, kept him off the internet, and didn't allow him out until last night, I think a short e-mail to me from him indicating the shipment would be delayed was in

order.

Those here wishing to do business in that fashion, feel free, but at least you were forewarned.

I should be receiving the radio on Monday, and of course, in fairness to Steve, I will report here under a seperate thread.

Stay tuned.....

Dan

Figure it out Dan. If you make the Pay Pal on Monday, seller does not pick up the email until tuesday. He decides to wait until the weekend, or even the following Monday to ship the item (one week, week and a half, no problem, we have lifes). You might get package two weeks or more after you did the Paypal thing.

Now, idiot, look back at all 42 responses to this thread. 41 Say you are a flaming idiot, 1 was kind of neutral and mused at the expectations.

Now raise your hand and say to the whole newsgroup "Dan Conti is a jerk"

Get a life

Steve

I'm glad that Steve came through after all, Dan. You are right in correcting my use of the word 'slanderous' and changing it to 'libelous'. I had to check my dictionary to confirm the oral versus written distinction - they are not words that I regularly use.

Also, I was not aware that BAD GUY ALERT and GOOD GUY ALERT were commonly used phrases. I did a Google search on Usenet groups and found 177 results for the former (4 related to this one about Steve) over a span of 10 years but only beginning to appear in the subject since 2000; 459 for the latter over a span of some 6 years. Curiously, the usage of BGA is almost exclusively in radio groups while GGA transcends a variety of groups. I see that you were the beneficiary of at least one GGA.

Regards,

Tom

pick
> up the email until tuesday.

PAYPAL payment made on Wednesday night, 10/9. He KNEW he would have it that night, and he did. He AGREED to ship the next day.

OK Steve, now YOU raise your little hand....can you spell AGREEMENT?

>He decides to wait until the weekend, or even
> the following Monday to ship the item (one week, week and a half, no
> problem, we have lifes). You might get package two weeks or more after
you
> did the Paypal thing.

I don't know about you, or just how much of what you just spewed you would REALLY tolerate if it was you, but I've done NUMEROUS transactions where the item is shipped the NEXT DAY after the PAYPAL payment was received, except for weekends and holidays. Using Priority Mail, I usually get it 2 to 3 days MAX from that point.

>41 Say you are a flaming idiot

Well, if you base your opinion of ME on 41 basically ANONYMOUS boobs with limited writing abilty and use of vulgarities and name calling, and you want to put yourself with THAT group, then you are not only an idiot, but a moron as well.

>I was kind of neutral and mused at the expectations.

I doubt it.

> Now raise your hand and say to the whole newsgroup "Dan Conti is a jerk"

OK Steve, I will if you also raise yours and proclaim, "Steve is a mindless fool who follows babbling idiots and does not have a mind of his own".

Dan -> hands now lowered.

No problem, Tom. They are terms quite often mis-used AND misunderstood.

Whether you agreed with me or not, it was really a pleasure to communicate
with a person who does not hide behind anonymity, use foul language or spew
vulgar names mocking one's surname of which I am very proud, as well as
being able to construct an extremely intelligent response to an issue.

Thanks again.

I recently received the MetroWest ProPower 3 charging stand included with a radio purchase. Looks like a nice unit, but the buttons are a bit confusing. Anyone have the instructions on how to use this unit? If so, a crash course on the use of this thing is appreciated.
Dan

Probably working on something related keeping you safe from terrorism or
national security.

So you prematurely called him a "BAD GUY" publicly. I would have waited,
then inquired on this newsgroup regarding him.

> Steve was very apologetic in his response.

So should you......here in this forum, using the subject line as you did to
him.
Say something like : "I SCREWED UP...Sorry Steve A. Giron!"

Have a good day,

Ken

I don't believe I did, but hey, we agree to disagree. You and many others
simply just don't get it. I thought a deal was a deal, someone's word was
ther bond, and "I'll ship tomorrow" meant just that. Once again, blame the
victim. BTW, how DOES one inquire here publicly? I suggest your read Tom
Holden's response to me regarding Bad Guy and Good Guy alerts.Hope you never
get stiffed, Pal...

That will not happen, and the jury is still out as to how this will
ultimately conclude.
Stay tuned.

> Have a good day,
>
Hey, you too....

(Why does everyone always end their bloated tirades here with "Have a nice
day", do you really want me to have a nice day? Or, "get a life"...sheesh,
what does that mean? All very sophmoric, yet amusing).

it is called. get the fucking dildo out of your ass. if someone sent something ground mail. it can take up to 15 days to recieve. I have payed people for 2 day delivery and got over 20 day delivery. I myself don't have a dildo up my ass. As you seem to alway run me down on all my posts. Nomatter if they are helpful or not. I would not beleive that you have contributed to this group at all. Well besides whining, running people down and saying people don't do things they should do. You remind me of a few sales I have had. A person whining saying they payed the person money and not getting anything in return. Even though they probably didn'tsend the money. That is the advantage of a credit card. You insist he has your $$. when infact. You could. if you wanted to. Call paypal. or even say visa, mastercard. american express and say you did not even send that transaction. all 4of those. will either stop the $$ being sent. Paypal will freeze the money or refund it and take it out of the other account and so on. If you can prove you are not a loser just wanting to flame a person out ofthe blue like you do to me. Shit. I sell lots of my canadian gear to the US with 2 day courier service. I have not got 1 bad comment on ebay or elsewhere. So I don't believe you have tried to stop the payment. there are easy ways to stop it. Oh ya. you insist I am hiding and you insist onswearing by ebay. I am NEMOSWITCH no matter where you look ya baby. waaaaaaaaahhhhhh. do some searching mr FBI dude. A credit card does not have the $$ till it is final.

Who says you have to call another country? I can call anyone I like.
Ain't no gun to my head telling me I have to call Moscow...

Morse Code is of NO VALUE in an emergency or else Police, Fire,
> and Paramedics would be REQUIRED to learn it.

Sure, it's of no value to them. What would they do with it? That's
silly to even consider.
Doesn't it seem odd that they
> are NOT required to know morse code, yet people in a HOBBY are? SURE it seems
> odd. Because it is odd.

Why is it odd? Morse code has been used for years and years. Only the
newest of the hams know no code. The vast majority do. But thats not
the real reason. The real reason is it's required by international
treaty.

>
> Also, in an emergency, you want as MANY PEOPLE AS POSSIBLE to hear and
> UNDERSTAND the call for help, not just the ONE PERSON in another country who
> happens to understand morse code! To most people, all they hear are some beep
> tones and do not know it is a call for help.

Uh, duh...If I had an emergency with only a cw radio, I would call the
closest cw op to my emergency, and have him use the landline to call
help. I can't use the same frequency as the cops, or fire anyway, so
why would it even be an issue? Even if I had an FM radio, I wouldn't
use it on a PD frequency unless it was a true life/death scenario. My
radio's are not capable of xmit on their freq's anyway. I have not
unlocked them, and have no plans to. Yea, you might come back and say
you would, but I ain't you. They throw you in jail for that crap
around here.
>
> If morse code had ANY purpose in an emergency or could help in just ONE way,

> Police officers, Fire fighters, and Paramedics would be required to learn it.

Thats about the silliest thing I've ever heard. "Or read"...:/ What
in the heck would they do with code? They don't monitor shortwave
bands for emergencies. The coast guard can be summoned to the HF bands
though. I've done it myself. I ran into a sailboat in trouble on 40m
one night, and called the coast guard in Miami. They plopped right on
our frequency. I bet someone there at the coast guard station knew
code. No, we didn't use it, as the boat was SSB, but what if the boat
only had a cw rig? Or the batteries were so low, that low power cw was
the prefered route to take?
I guess unless I or someone else that knew the code, heard them, they
would be totally SOL. That would be a hell of a note. Stuck out in the
Pacific on a boat with a cw rig, and not a single person in the US
could copy them, because it became stylish to be "new tech" and
everyone dropped the code totally. That's gonna be our future in not
too many years down the line. The code is history as far as ham tests
as soon as it's dropped by treaty. That very well could be the next
WARC. Less is not more. I am a superior radio operator knowing code,
than not knowing it. Any argument to the contrary is ludicrous. I'll
save that poor cw running bastard in the sailboat. You'll let him
drown due to ignorance if you don't know the code. Thats the simple
truth. New fangled digital modes won't do you a bit of good if he
doesn't have them on the boat. And yes, I have heard one real life
emergency using CW. So it can, and does happen.

> They seem to be able to get through on THEIR BANDS with voice just fine.

Duh, no kidding...
>
> Something to THINK about.

I have better things to think about. MK

Dan,

Read past articles and its responses on "Tips on how to buy a
used shortwave radio on the Internet.", "Need Advice: I May Have Been
Ripped
Off" and "Confessions Of An Ebay/Yahoo Scam Artist" thru google search
in shortwave group. Read peoples experiences on how they deal
transactions on e-bay and learn from it. They have made good responses
to it, it will help you out next time to deal on the Internet.
Research on google groups under shortwave groups only, type the
word "beware of" and you will discover more the people to avoid doing
business on the Internet due to bad deals and complaints from buyers
or sellers.
Good Luck.

Jess

If you have any experiences either good or bad deals on buying a used shortwave radio on the Internet. Perhaps, you can share your experiences with us so it can help others to be aware of dealing with crooks who are not honest and avoid having the same mistakes as others did before. So send us your comments or suggestions so we can learn from you as much as you learn from us.
I hope you can pass the torch of this subject always, It will always be in the awareness of people who are doing business on the Internet. As as I told before the Internet is a free market, anything goes, you can deal with the good guys or the bad guys.

Jess

The questions are good ones....but the best crooks know all about them
and will have very logical and plausible answers.
If you ask if it works perfectly, there are two likely answers:
1) honest guy and it does work perfectly
2) crook sez it does, but it don't.
Over the years I've become WORSE at telling the difference.
Maybe I'm just old....maybe the crooks are getting better.

I know one honest seller with quality equipment who routinely lies
to purchasers telling them what they want to hear. The equipment
works perfectly and the buyer has no lingering doubts.
Kinda like when your girlfriend asks if those pants make her ass look big.

It makes the "sale" a lot easier if you lie a little. ;-)
mike
Bunch of stuff For Sale and Wanted at the link below.
Tek 2465, TFT projector, Transoceanic, ham radio, 30pS pulser
Tektronix Concept Books...
http://www.geocities.com/SiliconValley/Monitor/4710/
First thing you ask from the seller the following questions:

1) How does the seller purchased the unit (brand new or
used)?
2) How long is this unit been with the seller?
3) Does the seller is satisfied with the performance of the
unit?
4) Why the seller is selling the unit?
5) Ask the seller if the unit has been repaired or modified?
6) Ask the seller if he can guarantee the performance of the
unit he
is selling?
7) Ask the seller if the unit sold to you, if faulty. Can the
unit be
returned back and refund the money?
8) What mode of payment the seller wants?

Hey, I have had a radio sent to me in the UK by USPS priority Air express
that took 11 weeks. They are pathetic, and the Royal-Mail here in the UK are
just as bad, I sent a Guy a radio to Canada by surface post the estimated
time is maximun 6 weeks, after 10 weeks I contacted them only to be told it
was sitting in Birmingham airport UK (Birmingham UK is no-where near the
sea) I said how pissed of with them I was and asked why it had taken 10
weeks to travel 100 miles, and why was it at an airport when it was supposed
to go by ship. Three days later the guy received the radio in Canada,
I guess they used a speed-boat :-))
regards
GB

Dan,

Don't let these fools get to you. Anytime you post something be prepared for some fool to attack you with their vile language. Makes me wonder why in any discourse one party feels the necessity to launch a personal attack. Guess they learn it from the politicians, launch a personal attack because their position is really defenseless.

Can you imagine what kind of life they must have if a post on the internet can make them that disturbed?

Keep posting about bad experiences and let the jokers post their most intelligent replys, they are rather humerous.

Have had 2 different Pro 93's and both have an issue when you put in
the dc power cord. Seems both radio's are reel sensitive to the "C"
adaptaplug, any movement at all will turn the radio off- on again.
Also notice the NI-MH batteries get warm over night wit the unit
turned off.
Anyone else notice this?
My Pro 92 has none of this issues.

There is an error in the manual. You need the "B" adaptaplug.

I think I know the answer to this (which is probably.... 'it depends'), but I thought I'd ask anyways.

If a system is a mixed apco-25 system, does that mean it's probably a 3600 baud system? My local PD is about to fo to one of those systems and I'm trying to figure out if the new Uniden units will work with it. Also, communicating with other local law enforcement is VERY important so I'm assuming they'd want to be as compatible as possible with other systems.

Thanks,
B

3885. Anyone ever get the urge to PUNCH a Radio Shack employee??

Newsgroup: rec.radio.scanner
Date: 2002-10-20 19:16:12 UTC
From: Kanberi <pti@capnet.com>
Message-ID: <3DB300FC.FA62E465@capnet.com>
Source record: 42474

Yesterday I went to look at scanners there (not that I'd actually
buy one from them) and the geek told me to step back. Apparently
I was too close to the back of the counter and to the scanners.
I told him that if I intended to rip one off that I would have been
in and out of there so fast his rinky dink Rape Shack surveillance
camera wouldn't have caught my image. He flustered up a bit
and I knew I had him. So I slowly lingered up and down the isles to give
him something to worry about. I gave him the old shifty-eyed routine to
make myself look like I wanted to stuff some cheap, useless electronic
product in my pocket. I roamed from isle to isle picking up this and
that and this again only to set it down in the wrong place or to put it
back on the wrong hanger.

he he he he I wonder if he'll mouth off to me again.

Radio Shack employees should be seen and not heard.

But it darn sure will when the bands are too dead for voice modes.If
there's any propagation at all then CW is more likely to make it
through. Of course some of the new digital modes do even better, but
require the necessary hardware, while CW does it with simple gear.

Speech Inversion is accomplished by mixing the speech spectrum (typically 300-3000 Hz) with a tone (commonly 3500 Hz) to produce some audio frequencies (3800-6500 Hz) then filtering to 3200-500 Hz constituting the speech inversion.

Hey! Give it a freekin' rest will you, pal? You just can't seem to leave
well enough alone. If Dan had literally fallen upon his sword (he has done so
figuratively already) you'd be complaining that he didn't suffer enough pain. I
don't think you guys are interested in anything more high minded than cheap
posturing. You guys want to parade your sensitivity bona fides for all the other
cheap shot specialists to admire? Do it somewhere else. Your act is getting old.

Walmart is selling a really neat digital wall clock that sets automatically
from radio atomic clock broadcasts. I just bought two and they work great.
Large numbers, date, day of the week and temperature. $19! They've got Rat
Shack beat to hell.

Tony,
Wrong group actually to be asking in ;-) but I'll give it a shot.

Indeed you can get a nice receiver for less than $200.00, Radio Shack has the DX-398 on sale because it is being closed out.......for $99.00......originally $239-249....something like that.

May I try an lead you in 'another' direction though. I have all the newer solid state receivers from Rat Shack (and some others) and a JRC-NRD-515 and though they are fine receivers, why don't you think about purchasing an older 'tube type' receiver?

I had picked up a Hammarllund HQ129X on ebay some months ago, here it is.....http://www.dxing.com/rx/hq100.htm .....scroll down. I got this, with shipping, for $180 something dollars.

I am now waiting on my new HQ140X, here it is :-)
.....http://www.dxing.com/rx/hq140.htm

The 129X is better than any shortwave that Radio Shack has to offer, hands down. Some may argue this statement but I have all of them to do a 'side by side'.

My HQ's 'do not' overload on the front end, which happens if you try an hook up a 'real' antennae to newer ones. Plus, I hear things now......that....I could never hear on the others.

They just don't make em' *now* like they did *back then*. I don't see me EVER buying another 'solid state' receiver again, after getting these 'boat anchors'.

Hope you consider what I said. I wished someone had told me what I told you and it'd have saved me alot of money. ;-)

**now if you're looking for something 'mobile', then you can't lug around a 47-60 lb. receiver.

Hope this steers you in the right direction. :-) Good luck, and let me know what you get.

I'm with you! I think the best shortwave radio you can buy is the Radio Shack DX-298. They are discontinued, but some stores still have them. They originally sold for $250 but are currently $99. I just bought a second one. I think it's the best RS has ever carried. If your local RS doesn't have one, they can have one sent from another location.

Arguably it is. ;-) Their only tabletop receiver they ever made, the DX-394 is a very often maligned piece, and rightfully so. But with a few simple mods, is on the level of a $300-350 radio.

As with most radios though, your antennae setup is 'extremely' important. :-)

Good information from all but while I use my desktop receivers a lot (and yes a good antenna is the key) I like to have a portable around also like the Grounding YB400PE. It let's you take it with you and let's you enjoy the receiver outside and other places. Look for something with BFO or SSB switch if you want to listen in to the hams and some of the military communications.

Mike

When I was a kid - probably 4 or 5 years old, my dad had a radio that
would pick up shortware/longwave. I remember tuning into that and
listening, and thinking gosh that must be a boring job. Reading the
time all day. :P

The DX-298 has an upper/lower sideband switch. All the earlier RS models I've had just had BFO...which can be bothersome to tune. The DX-298 is the closest thing to receiving like an expensive ham HF transceiver that I have seen...with a good external antenna, of course. I did an A/B comparison with my Kenwood TS-140S transceiver and the performance of the little portable was impressive.

I concurr with the "B" adaptaplug suggestion. I bought the Pro-93 the first day it was available and in less than 24 hours, had remedied that problem. I e-mailed RS notifying them of the error in the manual. Who knows if they did anything about it.

Looking for an adapter or even better, Radio Shack part-number, that would allow me to connect my 2.5mm hands-free Star-Tac cell phone earpiece to the earphone jack on my BC3000XLT and my other scanners.

Note that my hands-free plug works great on my BC200XLT, correct size.....looking to do the same thing with the BC3000XLT

thanks

Bill

Yep, but I'm trying to remember the complete announcement....

"This is radio station wwv, broadcasting on internationally allocated
standard carrier frequencies of 2.5, 5, 10, 15, 20 and 25 megahertz,
providing time of day, standard time interval, and other related

information. Inquiries regarding these transmissions may be directed to the national bureau of standards, time and frequency services section, boulder, colorado, 80924"...or something like that.

25 MHz and 20 MHz were dropped in the late 70's I think, then 20 MHz brought back in the mid '80s, maybe?

More useless pieces information I seem to retain, at the expense of more important stuff.....

> language and vulgar name calling.

I believe you started the namecalling with "Thief!"

Didn't you?

Did you not?

And how do we know "Dan Conti" is your name and that dconti@nj.rr.com is
your email address?

And who cares?

But it does not go unnoticed that you expanded you venomous outburt to just
about everyone that responded.

Here's a fact:

You did not make your post as any type of public service so that others
could be protected, rather it was a childish temper tantrum meant to
embarrass and damage Steve. It was mean-spirted, self-centered,
self-serving, childish, and ill-conceived.

> The purpose of this post is to issue an update in this matter as to
squelch
> further debate.

What you mean here is to squelch the criticism you rightly brought upon
yourself.

Do you always try to control everyone around you?

And, if so, why would you make a fool of yourself in public?

> The final chapter

(The "final chapter" is written everytime someone disagrees with you.)

> will probably not be written until Monday
> or Tuesday of this week, but this is briefly how it stands right now:
>
> Last night, AFTER my PAYPAL complaint was issued, and the initial post was
> made here, I received an e-mail from Steve. Coincidence? Did someone
from
> here contact him? I don't know.

We'll add that to the long list of things you don't know. That long, long
list.

> He stated that he was drawn away suddenly
> to work on a project at a secure government facility, and has been away
all
> week. He stated that he had NO outside internet access this entire time.
> He did not specify as to the exact date he was drawn away, or when he
> returned.

So?

Are you now calling him a liar?

Based on what?

And WHY?

> Steve was very apologetic in his response.

I'm sure he was.

Will you be?

You certainly haven't been yet.

> Steve stated that he was going to reverse the PAYPAL payment to me, and
also
> ship the equipment today, via overnight mail. All I asked of him was to
> ship the equipment, and I never asked for the reversal.

Did you refuse it?

Did you refuse the reversal?

Why not?

Your comment, "All I asked of him . . . .", is the most self-serving, deceitful thing you've posted yet.

Have you no shame?

Have you no notion of right and wrong?

> I do not know why
> he chose to do that if he was shipping me the radio.

To stop you from trashing him publicly?

Do ya think?

Could it be?

Don't play innocent.

It is EXACTLY the response you wanted.

You have a pathological desire for public validation. And that's why YOU reprinted it here.

> He trusted that upon
> receipt of the radio, I would re-submit the payment to him via PAYPAL.

So at least one party to this transaction shows some trust in the other person.

OK, we make a little progress.

BTW, I wouldn't trust a bit. Not on your life.

> As of this writing, I have not received the PAYPAL reversal in my PAYPAL
> account.

So what? Must the world stop and all atnetion be directed to you? Is instant gratification the only gratification you know?

Do you ever stop whining?

Are you public (government) school teacher?

> Also, I did a US Postal tracking on the number he gave for the overnight,
> and once again, as of this writing, no record of the shipment.

So what?

At least one party to this transaction has shown some trust.

Why haven't you?

WHY HAVEN'T YOU?

> YES, it is possible that there are delays in both items above.

So what?

> Anyone contesting the facts above should contact me and I will privately
> e-mail you his e-mail text and the USPS tracking # he provided.

Most people don't care about your personal problems. Problems,
incidentally, unrelated to this transaction. And you'[re the last one I
would trust to produce "facts".

> In my opinion, and that is what the newsgroups are, a bunch of opinions,
the
> BAD GUY title was not excessive.

Not in your mind. But that goes back to the personal problems not a subject
of this thread.

> I firmly believe that a deal is a deal,
> and that not having shipped, 9 days past receiving the money, WITHOUT any
> contact with the buyer, is BAD GUY performance, in the context in which we
> use GOOD GUY and BAD GUY alerts here.

What's this "we" stuff, Lindburg?

In your posts you speak for yourself, not others.

I suppose you presume to speak for others when you childish behaviour is
questioned. I'd expect no more from you.

> Yes, there may have been a reason as to the delay, but unless the
government
> snatched him from his house minutes after receiving my PAYPAL money, kept
> him off the internet, and didn't allow him out until last night, I think a
> short e-mail to me from him indicating the shipment would be delayed was
in
> order.

I have really bad news for you. There are things, millions of them in fact,
more important than you and your personal problems.

But you attempt at sarcasm only adds to the negatives in your column.

> Those here wishing to do business in that fashion, feel free, but at least
> you were forewarned.

(Your claim of "forewarning" is vacuous.)

I'll certainly remember not to do business with you, and will look forward
to doing business with Steve.

All as a result of your postings. Thanks for the warning.

> I should be receiving the radio on Monday, and of course, in fairness to
> Steve, I will report here under a seperate thread.

Oh, gosh, I'll hold my breath. But fairness is not one of your exhibited
traits here. Maybe you'll surprise us and apologize for your tantrum. And
if it isn't there MONDAY, we'll look forward to more venom and namecalling
from you>

> Stay tuned.............

Maybe you should reconsider your behaviour.

You're continuing to make a fool of yourself.

> Dan

Ahhh, "To Tell the Truth" another ANONYMOUS little fool spewing SO many words and saying SO little.

OK, I'll bite......let's see what words of wisdom YOU have for me on this....

> You put your venom in their faces. What do you expect? They were appalled
> by your venom.

I guess you've never seen BAD GUY Alerts on the groups before? You use the words "their" and "they". Are you now the new ANONYMOUS spokesperson for the newsgroups?

> Do you think you have a corner on that market? Or are you the only one
that
> matters?
>
> What *should* you expect?
>
> See comments re: personal problems, below.
>
> I believe you started the namecalling with "Thief!"

No , I did not. If and when you learn to read and not follow, you will know this.
Not one time did I call Steve any names, other then the initial title of the generic "Bad Guy Alert" which I stand by.

Also, in all of my responses to the posters here, not once did I ever call anyone a name, use foul language or vulgarities. Despite the nonsense thrown in my direction. We can all agree to disagree, and a good debate is healthy. The other nonsense is unnecessary, wouldn't you agree to that at least?

> Didn't you?

NO

> Did you not?

Uh, no I did not. Asked and answered.

> And how do we know "Dan Conti" is your name and that dconti@nj.rr.com is
> your email address?

#1. dumb statement in this response not worthy of a reply.

> And who cares?

Well, Mr Turth, apparently you do since you spent quite some time, thought, and effort into responding to me here. The fact that you even question it's veracity indictaes you DO care.

> But it does not go unnoticed that you expanded you venomous outburt to just
> about everyone that responded.

OK, show me just ONE example from any of my responses where I "expanded venomous outbursts" to anyone....(whatever that means. I didn't know you could expand a venomous outburst, must be fun).

> Here's a fact:
>
> You did not make your post as any type of public service so that others
> could be protected, rather it was a childish temper tantrum meant to
> embarrass and damage Steve. It was mean-spirted, self-centered,
> self-serving, childish, and ill-conceived.

#2. dumb statement. These are the FACTS according to Mr. Tell the Truth. In reality sir, it is merely your opinion of which you are of course entitled.

> What you mean here is to squelch the criticism you rightly brought upon
> yourself.

Once again, if that is how you perceive the update, knock yourself out.

> Do you always try to control everyone around you?

Yes, I do Mr. Truth...OK?

> And, if so, why would you make a fool of yourself in public?

Your opinion against which I cannot defend.

> > The final chapter

> (The "final chapter" is written everytime someone disagrees with you.)

#4. dumb statement. The one and only time I used that terminology was in the update. I thought it's meaning was pretty clear. If you and others would like, I can certainly offer many MORE chapters to the saga. I can go on and on with this mental mastrubation indefinately.

> We'll add that to the long list of things you don't know. That long, long
> list.

There you go with the "we" again. So if I understand you correctly, you and a bunch of other ANONYMOUS folk got togther, took a look at an entire litany of information, and decided as a group that there are many things I do not know. Damn, you are good.
OOpps, I forgot, add this as dumb statement #5.

> > He stated that he was drawn away suddenly
> > to work on a project at a secure government facility, and has been away
> all
> > week. He stated that he had NO outside internet access this entire
time.
> > He did not specify as to the exact date he was drawn away, or when he
> > returned.
>
> So?

Well, many folks were wondering as to what Steve's excuse was for NOT shipping AS AGREED. (Once again if you READ all of the threads you would know this). So I obliged and relayed it here. OK?

> Are you now calling him a liar?

No, never did, that's another silly conclusion YOU drew from the information.

> Based on what?

> And WHY?

These little snippets will be # 6 and # 7 dumb statements.

> > Steve was very apologetic in his response.
>
> I'm sure he was.

Well , he had reason to be. If you don't get it, YOU WILL NEVER GET IT!

> Will you be?

No, absolutely not. I did not do anything wrong, nor did I violate any terms of our agreement.

> You certainly haven't been yet.

Nor will I be...

> > Steve stated that he was going to reverse the PAYPAL payment to me, and
> also
> > ship the equipment today, via overnight mail. All I asked of him was to
> > ship the equipment, and I never asked for the reversal.
>
> Did you refuse it?

Refuse what? The radio? It is due to arrive tomorrow and I will accept it. Never got the reversal, and it is just as well. Receiving the radio will suffice.

> Did you refuse the reversal?

No. See above.

> Your comment, "All I asked of him . . . .", is the most self-serving,
> deceitful thing you've posted yet.

>
> Have you no shame?

Your posting quotes of mine out of context is the most self-serving, moronic
thing you could do as well. Have YOU no shame?

> Have you no notion of right and wrong?

I guess not, according to you and your committee.

> > I do not know why
> > he chose to do that if he was shipping me the radio.
>
> To stop you from trashing him publicly?

No, to finally fulfill his end of an agreement.

> Do ya think?
>
> Could it be?
>
> Don't play innocent.

Your cutesy attempt at an arrogant literary style asking rhetorical
questions you obviously have already answered was quaint once or twice, but
has become boring and silly in it's continuation.

> It is EXACTLY the response you wanted.
>
> You have a pathological desire for public validation. And that's why YOU
> reprinted it here.

Now Mr. Truth is a Psychologist as well?

> > He trusted that upon

>
> Do you ever stop whining?
>
> Are you public (government) school teacher?

Makes absolutely NO sense, and is BEYOND dumb statement.

You have become so caught up in your own unimportance here as evidneced by your rantings above which are now redudancies or previously issued attacks against me.

> > Also, I did a US Postal tracking on the number he gave for the overnight,
> > and once again, as of this writing, no record of the shipment.
>
> So what?
>
> At least one party to this transaction has shown some trust.
>

>
> WHY HAVEN'T YOU?
>
More redundancy, more rhetorical questions. Amazing how hateful someone can be against another whom they do not know, defending someone else whom they do not know.
Once again, blame the victim. But alas, you are absolved as you cannot help yourself.

> > YES, it is possible that there are delays in both items above.
>
> So what?

You said that once or twice already. A little writing tip : Don't keep asking silly stupid questions rhetorically, just make your statement and move on.

> > Anyone contesting the facts above should contact me and I will privately
> > e-mail you his e-mail text and the USPS tracking # he provided.
>
> Most people don't care about your personal problems. Problems,
> incidentally, unrelated to this transaction. And you'[re the last one I

How did this get from Bad guy alert to a debate? Oh yeah VHF is the way to go for emergency's, Why use HF?
Police and firefighters don't need to know CW due to the their involvement in THEIR Radio public service. It's separate and licensing is completed thru their respective dept. In fact most Officers have Nextel's as well as handheld 800mhz.
Hams handle modes of communication that requires a degree of skill not required by a Police or Fire agency.
That's why we have Ham Radio Operators!!! For a Hobby UNTIL we are called upon for our Public Service. By whatever modes necessary.
Oh By the way next time a earthquake or something worse, That's when you use HF.

3929. Re: BAD GUY ALERT! - Steven A. Giron AD6GO

Newsgroup: rec.radio.scanner
Date: 2002-10-21 09:02:28 UTC
From: Steven <sgiron@adelphia.net>
Message-ID: <EoPs9.41674$CJ5.7832310@news3.news.adelphia.net>
Source record: 42568
Cross-posted to: rec.radio.shortwave,rec.radio.scanner,rec.radio.swap

Hello groups.
I'm Steve Giron, AD6GO. I'm sure several of you have dealt with me in the past as I've bought/sold
at least 50 radios/antennas/tuners and other electronic and photographic related items over the years. Of all the deals
I've made, I've never been burned, nor have I burned anyone. About a year ago, one buyer stated he was unhappy
with a radio I sold him and I gladly returned his money. Someone else bought it and was tickled to have the radio.
You can't please everyone. Like Dan said, we have previously completed a deal with each other in the past with success.

I don't hold fault against Dan for being upset or worried, everyone has their levels of tolerance.
I do however take exception to the way Dan Conti has grossly mis-stated the facts and twisted my words around to his favor. I also take exception to Dan's labeling me as "Bad Guy". For those who know me, I'm sure you chuckled at
a strangers interpetation of my character and his public ranter. I will decline to publicly broadcast
the details of our private emails here. If you care to know, email me privately and I will fill in the blanks for you.
I will say however, that I did send Dan both my home phone number and my cell phone number and asked
him for his. He declined to call me and declined to give me his phone number for reasons I'll keep private
as his email to me was private.

If you ever chose to do business with Dan Conti in the future. I will be happy to share with you excerpts
of Dan's emails to me and urge you to go to www.google.com and do a usenet search for Dan Conti.
While there are some "Good Guy" alerts about Dan, there are also several posts from Dan that appear
to be in my opinion "less than adult-like" You decide for yourself.

I have tracked this shipment to find delivery attempt has been made to Dan's P.O. Box. per the
USPS tracking website. It is not up to date as compared to UPS and FedEx tracking is, thus his follow up
public post of not being able to track the package. Dan will have this package in his hands in just a few hours.

If Dan's posts about labeling me a "Bad Guy" will prevent you from dealing with me, so be it.
Opinions are like body parts, every body has one. From time to time I buy and sell items
via the Usenet, Ebay, etc and will continue to do so. Some folks will take the opportunity make
a deal when the see one.

Warning about PayPal. As a result of Dan's complaint to Paypal, (I don't know what the told them)
they have reversed the payment that was made by Dan. The funds reversal was done by Paypal without
even hearing from my side. The money came out of my Paypal account that had a balance so my personal
banking account was not affected, however it could have been had I transferred the money to my bank account.

I trust that Dan will post that he received the radio and accessories as discussed and thread will end.

Regards,
Steve Giron

Message-ID: <llj7ruk7g4lt7erhqfg3k7r6uhca4gol79@4ax.com>
Source record: 42569

When the new uniden digital scanners (finally) come out, they'll still be missing the cellphone band - which got me thinking. When a function you really want is missing from a scanner "native" to the USA, do you try and buy one from Australasia/Europe?

Allan.

No, they will not have unblocked cellular frequencies in the U.S. However, there are also issues with buying one out of the country, besides being illegal. The band plan is different, and in some cases the stepping is different within a given band.

Save your money! Buy a good scanner, and a good pair of binoculars!
Neither is good in the Scanocular.

Thanks for the update Steve. In my case though it was not needed. I've never met you or ever corresponded with you before but it wasn't hard to see Dan Conti's personality shine through in every line he typed. Good luck on getting your money, my guess is this is far from over.

This scanner is brand new, unopened and not refurbished.

Full, continuous coverage from 530 kHz ~ 1650MHz.

(No gaps, locked out or restricted frequencies)

Any mode from AM, Narrow FM, Wide FM together with Upper & Lower sideband. Increment steps vary from 1 kHz up to 100 kHz although when LSB or USB is selected then increment steps as small as 100 or 50Hz can be used allowing for true and accurate tuning of utility stations.1000 CHANNEL MEMORY (100 CH x 10 BANK), 500 CHANNEL PASS MEMORY

Comes with antenna, car connector, NI-CD batteries (4), hand strap, belt clip, earphone and English manual + Owner's guide and Operating Instructions by Richard J. Wells

Price is $260 US + shipment

If you have any questions, please do not hesitate to contact me:

If you leave the unit plugged in over night then the batteries are warm
because you are charging the batteries.

Hey, just downloaded it this morning. It's got a beautiful GUI. It recognized my bank names instantly but I had to manually download everything else from the scanner, oh well. It allows on-board control of the scanner as does TrunkStar. Pretty nifty.

These clocks, however, work off a different broadcast: the 60 kHz carrier signal from Fort Collins, Colorado which is a 1 bit/sec modulated amplitude digital message format.

I suspect what you want is "Universal Coordinated Time", once called
"GMT" or "Greenwich Mean Time". It's broadcast by WWV on 2.5, 5, 10, 15,
and 20 MHz in the U.S.

First, make sure you don't have the 10 dB attenuator switched in (on the back panel).

This radio has about 10 preselector filters in the front end each tuned to cover a particular frequency range. The appropriate filter is switched in (as the radio scans) based on the specific frequencies programmed. There's a slim chance that you have a shorted capacitor or something in the 450 MHz band pass filter.

I have a PRO-2004 and found the sensitivity to be marginal in the UHF region too. Assuming you already have a good outdoor antenna and low loss coax, you might consider adding a low noise preamp. This is one radio that seems to tolerate a preamp better than most.

Art Harris

Neither rhetorical nor redundant.

And again, you do not answer.

> Amazing how hateful someone can
> be against another whom they do not know,

Look at your statements re: Steve.

Pot-kettle-black.

> defending someone else whom they
> do not know.

Here's where, after making a public post you object to public discussion.

Because so few people agree with you.

One would think you'd be used to that by now . . . .

> Once again, blame the victim.

You are a victim mof your own behaviour

> But alas, you are absolved as you cannot help
> yourself.

I know not to do business with you.

> > > YES, it is possible that there are delays in both items above.
> >
> > So what?
>
> You said that once or twice already twice already.

And you ingored it twice already.

Wow! Glenn,

That was pretty darn close. As I read your reply, the voice and the announcement came flooding back. If someone was to pull out an old tape, you'd be off by no more than one word.

I remember when I was a teen, my shortwave would only pick them up on 2.5 Mhz, and they were announcing that they were going to drop that frequency. I actually wrote them and told them my situation. Couldn't beleive it when I got a letter back from them in a couple of weeks saying that they were going to keep the 2.5 Mhz. Felt pretty good that they would write me back. Too bad I didn't save the letter.

I actually looked into getting an unblocked Canadian
IC-R3 but it would have been more than TWICE the
price of my blocked US version!! At that, I might do
better to get a second scanner like a Canadian IC-R2
for the difference and have two scanners to boot. JELo

> > If the bands are dead, even cw isn't going to get through.
>
> But it darn sure will when the bands are too dead for voice modes.

1) It is not getting through when the person listening on the other end doesn't understand morse code, which would be 99% of the population.

2) No bands needed for emergencies are ever "dead" for voice modes. No police officer starts using morse code because bands are not good enough for his voice to get through to the dispatcher.

3) Try calling 911 and use the touch tone pad to send morse code the next time you need help rather than talking into the phone and see what happens.

> If there's any propagation at all then CW is more likely to make it
> through.

Voice will always make it through to more people on the other end than morse code, and this is because more people understand voice, and very few of the population understand morse code. Even the military gave up on the inefficient and obsolete morse code.

> > In an emergency, you do not want to contact someone in a different country, they
> > can't help you.
>
> Who says you have to call another country?

The whole point of "bands being so bad that voice can't get through" is in relation to talking
long distances. In an emergency, you want someone close by, not in the next state or country.

> Morse Code is of NO VALUE in an emergency or else Police, Fire,
> > and Paramedics would be REQUIRED to learn it.
>
> Sure, it's of no value to them. What would they do with it? That's
> silly to even consider.

Glad you see that. Most oldtimer Hams don't.

> Doesn't it seem odd that they
> > are NOT required to know morse code, yet people in a HOBBY are? SURE it seems
> > odd. Because it is odd.
>
> Why is it odd? Morse code has been used for years and years.

And so were washboards and horses. Now we use washing machines and cars. Having been used for
years means nothing. We didn't invent microphones and speakers yet, that is why morse code was
used. The telephone quickly replaced the telegraph and no one uses their phone lines to send
morse code. Only a few nostalgic hams use morse code, no one else.

> Only the newest of the hams know no code. The vast majority do.

The MAJORITY of hams are no-code technician class! The MINORITY of hams know morse code.

> But thats not
> the real reason. The real reason is it's required by international
> treaty.

Japan seems to have no problem having hams use bands below 6 meters without learning code, and
even in the US, getting a doctor's note lets you violate these international laws for some
reason. Needless to say, international code requirement are going to finally be removed
officially next year. There is nothing you can do about it.

> > Also, in an emergency, you want as MANY PEOPLE AS POSSIBLE to hear and

> I will preface my remarks by stating that I am appalled by the venom spewed
> in my direction by the majority of respondents to the topic of my initial
> thread here.

The initial thread being your posting someone's personal information on the internet without his consent.

> It was also interesting to note the the majority of these
> responses were from posters hiding behind the veil of anonymity

After what you did with the other guy's personal info, do you really think any SMART person would reply with his real name? And why do you care so much what name someone is using to make a point here? The ONLY reason this could bother you is because you want the real identities so that you can take revenge with this info. My points made here will have no different meaning just because I am stupid and post my real name, if anything, it just shows that I would be stupid and then my points would therefore be LESS credible, not more.

> , using foul
> language and vulgar name calling.

You forgot posting people's personal information on newsgroups because you dislike them. That is a LOT WORSE than simple name calling and using words that are in the dictionary.

> The purpose of this post is to issue an update in this matter as to squelch
> further debate.

Then you are not very smart. No post can do that. The way to stop the thread is to stop posting replies. When you stop replying, the thread will die.

> Last night, AFTER my PAYPAL complaint was issued, and the initial post was
> made here, I received an e-mail from Steve. He stated that he was drawn away
> suddenly
> to work on a project at a secure government facility, and has been away all

So we were right, and you made an ass out of yourself.

> He stated that he had NO outside internet access this entire time.
> He did not specify as to the exact date he was drawn away, or when he
> returned.
>
> Steve was very apologetic in his response.
> Steve stated that he was going to reverse the PAYPAL payment to me, and also
> ship the equipment today, via overnight mail.

And now there is no way you can undo the posting of his personal information. You will get your item and your life will be just fine, meanwhile the damage you did to poor steve will be around on usenet search engines for many many years to come.

Did you mention to him what you did here on the newsgroups? Please let us know how he responded to you telling him this.

You mean from your own experience of ripping off other peoples
mail.

Dear Mr. Truth :

For your information, pointing out DUMB statements, is NOT name calling, but simply a reflection upon the infomration you provided.

The rest of your diatribe here is simply trash, redundant,and not worthy of a continued waste of time.

Dan

Well, you *say* you're not anonymous, but you are, nonetheless, a malcontent
and schoolyard bully.

Do you think the malcontent schoolyard bully cares?

He cares about only himself in his warped view of the world.

Period.

> The MAJORITY of hams are no-code technician class! The MINORITY of hams know morse code.

WRONG! There are more Techs than any other single class, but still far
from a majority. See ham census data below from qrz.com:

http://www.qrz.com/i/census.html?

BTW, many Tech Plus (passed code) hams have been reclassified as Tech by
the FCC when they renew because the FCC no longer wants to track Tech Plus in
their database.

You are the one ranting in public.

And you demand sympathy?

What a self-centered malcontent schoolyard bully.

Pathetic.

>
> The initial thread being your posting someone's personal information on
the
> internet without his consent.
>
The information I posted is public record, made public by Steve in his acceptance of an FCC radio license. No big secret there, nothing sensitive or personal posted. BTW, it turns out his address has changed.

Funny thing is that in t heir zeal to chastise me, and put their two cents in on this matter, respondents here, most anonymous did additional research and dug up all of Steve's real information and beyond, AND POSTED IT! I didn't do that, your COLLEAGUES HERE DID!

> After what you did with the other guy's personal info, do you really think
any
> SMART person would reply with his real name?

You are assuming there SMART people frequent these groups. The majority of posters on these groups post anonymously not because they are afraid of horrible people like me, they do it so they can use foul language, call people names, and say really STUPID things without anyone knowing the true identity of the fool doing it.

>And why do you care so much what name someone is using to make a point
here?

See above.

> The ONLY reason this could bother you is because you want the real
identities so that >you can take revenge with this info.

Revenge? Be careful there my friend, you are starting to cross over the line. I would really like to hear how you describe this "revenge" I will be taking.

> My points made here will have no different meaning just because I
> am stupid and post my real name, if anything, it just shows that I would
be
> stupid and then my points would therefore be LESS credible, not more.

Again, see above.

> > , using foul
> > language and vulgar name calling.
>

> You forgot posting people's personal information on newsgroups because you
> dislike them.

No, once again it was PUBLIC information. Please try and follow. I do not
DISLIKE Steve, what I dislike is when someone violates an agreement and does
not even communicate with the buyer. Maybe I was just expecting too much.

> That is a LOT WORSE than simple name calling and using words that are in
the dictionary.

It is? You are Proud that words like F***, S***, and C*** are in the
dictionary?
The word BITCH is in the dictionary, but if your wife or girlfriend,
(assuming you are a man), posted here, and in my response I called her a
BITCH, you would be upset, correct? Or maybe not.

>

Malcontent and schoolyard bully. Is that the best you can do?

Come on, your strong point seems to be name calling, so let's have it, go for the gusto, I am sure you can find better and more illustrative names to call me.

I stand corrected, and will change course here, and in your case, resort to name calling :

YOU, my anonymous little friend, are a mindless, hateful SCUMBAG with nothing better to do with your life then respond to silly insignificant posts on the newsgroups.

This thread I created served MY purpose. How does being so hatefull here serve yours?

>
> I don't hold fault against Dan for being upset or worried, everyone has
> their levels of tolerance.
> I do however take exception to the way Dan Conti has grossly mis-stated
the
> facts and twisted my words around to his favor.

Steve....as I said in my e-mail to you and will say here. The "Facts" are pretty simple. Repeating them is not necessary. I challenge you to point out where I have "twisted your words". If so, I will stand corrected.

> I also take exception to
> Dan's labeling me as "Bad Guy.

I submit here that the label used was probably harsh, but it achieved the desired result, and is commonly used on the groups any time a buyer or seller feels the other party has not fulfilled their side of an agreement. It is an unofficial newsgroup "feedback" system people use when doing a search. I did not invent GOOD BUY or BAD GUY as header titles, others did.

>For those who know me, I'm sure you chuckled
> at
> a strangers interpetation of my character and his public ranter. I will
> decline to publicly broadcast
> the details of our private emails here. If you care to know, email me
> privately and I will fill in the blanks for you.

Steve, your creation of this illusion that something nefarious or different was going on in our e-mails is patently unfair. You have my permission to reprint them all if you so desire.

> I will say however, that I did send Dan both my home phone number and my
> cell phone number and asked him for his.

Yes, you did so 8 days after receiving my money, and only after having a PAYPAL complaint filed, and the BAD GUY alert posted here. I saw no need in giving you mine, as my position was simple and clear in my e-mail. There was nothing further to discuss.

> He declined to call me and declined to give me his phone number
> for reasons I'll keep private as his email to me was private.
>
The reason is as stated above. I NEVER gave you a reason, Steve. Once again, post the e-mails or knock it off.

> If you ever chose to do business with Dan Conti in the future. I will be
> happy to share with you excerpts
> of Dan's emails to me and urge you to go to www.google.com and do a usenet
> search for Dan Conti.

I have no problem with you submitting my e-mails here or to anyone privately. I also have NO problem with anyone doing a search on me. I stand by my track record in buying and selling, as well as the posts I've made over the years. They are MY opinions and I am entitled to them. We can agree to disagree.

> While there are some "Good Guy" alerts about Dan, there are also several
> posts from Dan that appear
> to be in my opinion "less than adult-like" You decide for yourself.
>
Now it's Steve's turn to attack the victim.

Let's talk about being adult-like...

Adults make a deal or agreement, and then abide by them.
Adults communicate with each other when there is a problem.

Did you act like an adult Steve?

> I have tracked this shipment to find delivery attempt has been made to
Dan's
> P.O. Box. per the
> USPS tracking website. It is not up to date as compared to UPS and FedEx
> tracking is, thus his follow up
> public post of not being able to track the package. Dan will have this
> package in his hands in just a few hours.
>
I have received the package, 12 days after the payment was made to you. The item is fine and as described. Thank you.

> If Dan's posts about labeling me a "Bad Guy" will prevent you from dealing
> with me, so be it.
> Opinions are like body parts, every body has one. From time to time I buy
> and sell items
> via the Usenet, Ebay, etc and will continue to do so. Some folks will take
> the opportunity make
> a deal when the see one.
>

> Warning about PayPal. As a result of Dan's complaint to Paypal, (I don't
> know what the told them)
> they have reversed the payment that was made by Dan.

They haven't reversed anything. It was still under investigation. It has
now been cancelled by me as promised.

>The funds reversal was done by Paypal without even hearing from my side.

Steve, come one now. Do I have to re-print the e-mail you sent me where you
acknowledged responding to PAYPAL and were given ample opportunity by them
to state your case. Did you forget what you told them? Enough said.

> The money came out of my Paypal account that had
> a balance so my personal banking account was not affected, however it
could have been >had I transferred the money to my bank account.
>
Now you are looking for sympathy. I don't know what PAYPAL did on your end
with your money, but they sent me NO money from you, nor did they REVERSE
any payments and you know it. Tell the truth Steve. If you have a problem
with PAYPAL, cry to them.

> I trust that Dan will post that he received the radio and accessories as
> discussed and thread will end.
>
I did so above. I hope this will end. However, I was going to make a
seperate posting on the conclusion of this matter, but since Steve chose to
respond here with this nonsense above, I will not. There is NO apology, nor
is there a retraction. If Steve were smart, he will let it die, as he
obviously will NEVER admit to the action HE took that caused this entire
mess. I will continue to defend any and all responses and attacks against
me that I see fit, indefinately.

Dan

3980. Digital Scanner Question

Newsgroup: rec.radio.scanner
Date: 2002-10-21 20:22:33 UTC
From: Chris <n8cop@comcast.net>
Message-ID: <xBqdnSYuL5Jw_CmgXTWcow@comcast.com>
Source record: 42520

I plan to purchase the Bearcat 250D when it becomes available, however, I have a concern about one of its features. Do any of you know if it will be able to track a 9600 baud digital system? I live in southeast Michigan and a few of the digital systems that I need to monitor, utilize a 9600 baud control channel. It would be a shame if it didn't, considering the price tag is over $600.00 !!

Thanks in advance,

Chris

> WRONG! There are more Techs than any other single class, but still far
> from a majority.

Not only are the Techs a majority (don't forget that most of the other classes on your census are
from dead people and those not in ham radio anymore) but MOST hams from the other classes don't
know code either!
They learned letters A and E to pass the multiple choice tests (that's all it took! Learn those
two letters and you could pick the correct sentence for the multiple choice answers!) and either
never knew the code, or forgot it from never using it as they just wanted to upgrade to TALK on
HF, not use code.

If you even TALKED to most General hams, you would know this.

I also "memorized" the code to get my Extra, but can't remember anything more than SOS, as is the
case with everyone in our ham club.

Next time you are at a ham fest or your local club, you might want to "quiz" a few of your General class hams and you might be surprised how many don't know the code anymore!

I wan't kidding when I said to THINK god dammit!

> the
> > internet without his consent.
> >
> The information I posted is public record, made public by Steve in his
> acceptance of an FCC radio license. No big secret there, nothing sensitive
> or personal posted.

If you really feel that way, you will have no problem posting the same info about yourself, right? Start with your home address. If you refuse, or try to weasle out of this one, you will just be hiding and be anonymous to us! You should have NO PROBLEM posting your address and info here if you REALLY feel there was nothing wrong with posting Steves. If you REFUSE to post your info, then you prove us right and that you know what you did was wrong.

> > After what you did with the other guy's personal info, do you really think
> any
> > SMART person would reply with his real name?
> >

> The majority of
> posters on these groups post anonymously not because they are afraid of
> horrible people like me,

But that horrible people like you will post their home addresses and phone numbers.

> they do it so they can use foul language, call
> people names, and say really STUPID things without anyone knowing the true
> identity of the fool doing it.

No. Someone could post as "John Emerson" or "Gordon Thompson" and you would not KNOW they are not using their real names! At least when someone uses a handle instead of a name, they are not trying to be deceptive. Anyone can post on a newsgroup as "Dan Conti" and preach that they are not posting anonymously when they really are. Why not PROVE you are really Dan Conti?! If you don't, then you are just as anonymous.

> >And why do you care so much what name someone is using to make a point
> here?
> > The ONLY reason this could bother you is because you want the real
> identities so that >you can take revenge with this info.

Right!

> > My points made here will have no different meaning just because I
> > am stupid and post my real name, if anything, it just shows that I would
> be
> > stupid and then my points would therefore be LESS credible, not more.

Right again!

> > You forgot posting people's personal information on newsgroups because you
> > dislike them.
> > That is a LOT WORSE than simple name calling and using words that are in
> the dictionary.
>
> It is? You are Proud that words like F***, S***, and C*** are in the
> dictionary?

I, nor anyone else, take pride that ANY words are in the dictionary. Are you proud that the word "THE" is in the dictionary? ALL words of the English language should be in the dictionary, not just ones that YOU or other christian assholes approve of the rest of the population using.

> The word BITCH is in the dictionary, but if your wife or girlfriend,
> (assuming you are a man), posted here, and in my response I called her a
> BITCH, you would be upset, correct?

How would you be calling me or anyone I know names make me upset?! Would this make YOU upset? How creepy to know that all I have to do is say that your mother is a whore and you would be upset by this!
Wow. Think of all the power I have over you!

> It is NOT in my nature to NOT defend when being attacked for
> something I stand by.

YOU were the one who made the attack! LOL! You dumb stupid bozo! You don't even remember this do you? You schoolyard bully!

> > > Last night, AFTER my PAYPAL complaint was issued, and the initial post
> was
> > > made here, I received an e-mail from Steve. He stated that he was drawn

>
> Well, if that's your assessment of what happened, fine, go with it.

At least you finally admit it.

> > And now there is no way you can undo the posting of his personal
> information.
> > You will get your item and your life will be just fine, meanwhile the

> damage you
> > did to poor steve will be around on usenet search engines for many many
> years to
> > come.
>
> Poor Steve? Blame the vicitm once again.

The victim is the one who has his personal info on the internet for years to
come because of your actions.

You have had nothing done wrong to you and will be receiving your package
shortly. Life goes on as normal for you, poor victim Steve is screwed for
years to come because of your actions.

The fact that you don't see this shows what an evil being you really are.

> > Did you mention to him what you did here on the newsgroups? Please let
> us
> > know how he responded to you telling him this.
>
> Yes, and I believe he has viewed the threads and will be responding on his
> own in due course.

No... what did he say to YOU when you told him this, you liar?

> Stay tuned...
>
> Dan

Dan, the schoolyard bully.

Yes. Such programs exist. One is included as part of Windows XP.

There are a bunch of programs that are better than the MS one.

A place to start is www.nist.gov

I use a program called Accu-set from Retsik Software, Enola, PA
717-732-4067 support BBS or
http://retsik-software.com note there is no www in the url.
The program will access one of several time sources on the net and synch
your internal PC clock.

I never "THINK!" before sticking my foot in my mouth wrote:

>
> The MAJORITY of hams are no-code technician class! The MINORITY of hams know morse code.

BZZZZZZT!!! WRONG!!! As of October 21, 2002 there are 637,480 hams
in the U.S. Of that number at least 421,000 of them hold a class
of license that requires the skill of knowing Morse code.

> I also "memorized" the code to get my Extra, but can't remember anything more than SOS, as is

> the
> case with everyone in our ham club.

I seriously doubt you or anyone else could pass a 20 wpm code test
by just memorizing the code unless you are one of the new 5 wpm
extras which is probably the only way you could get to Extra.
Either way, if SOS is all you can remember you really are stupid.

BTW
Bob Parnass now has a tk3 program that is on his website. The program is currently usable for reading and writing channel configurations to the radio. It is still in the early stages, and most of the advance settings of the radio are still to be added, but the price is right (GNU). Linux, and Windows http://parnass.org/tk3/

facts and twisted my words around to his favor.
>
> Steve....as I said in my e-mail to you and will say here. The "Facts" are
> pretty simple.

Apparently not, given what Steve had to say. Caught in a little distortion,
weren't you?

> Repeating them is not necessary.

Dan is starting to crap in his pants now, and is trying to manipulate the
situation so that the "other side" will keep quite. Dan, you didn't have
any problem bleating out your self-serving "complaints" over and over and
over . . . . But to hear the ''other side" just once would be unnecessary.

This should be good. What's next, Dan, are you gonna gamble that Steve has
better manners than you (a pretty safe bet by what I've seen) and hope that
he'll pass on participatung in your one-way pissing contest? That's he's
well enough mannered to let even you slide on a little playground bully
bravado just stop your yapping?

> I challenge you to point
> out where I have "twisted your words".

Yep, there it flows.

LOL!

> If so, I will stand corrected.

Will you apologize for your playground bully tactics?

Not so good a bet, I reckon.

> > I also take exception to
> > Dan's labeling me as "Bad Guy.
>
> I submit here that the label used was probably harsh, but it achieved the

> search. I did not invent GOOD BUY or BAD GUY as header titles, others did.

I was openly following convention.

Dan, you appear to be laboring under the delusion that everyone here acts
like you, a self-centered playground bully.

> >For those who know me, I'm sure you chuckled
> > at
> > a strangers interpetation of my character and his public ranter. I will
> > decline to publicly broadcast
> > the details of our private emails here.

Dan breathes a sigh of relief, and heads to the bathroom to clean himself
up.

> > If you care to know, email me
> > privately and I will fill in the blanks for you.

Dans thinking, "Well if anybody does, they may not print the details. Then
I could always pick another phony name (maybe "Bill Smith", or something
likewise benign.)

> Steve, your creation of this illusion that something nefarious or
different
> was going on in our e-mails is patently unfair. You have my permission to
> reprint them all if you so desire.

Still got that bet going that "Steve has better manners than you (a pretty
safe bet by what I've seen) and hope that he'll pass on participatung in
your one-way pissing contest? That's he's well enough mannered to let even
you slide on a little playground bully bravado just stop your yapping?

John Doe?

Jack Jones?

> > I will say however, that I did send Dan both my home phone number and my
> > cell phone number and asked him for his.
>
> Yes, you did so 8 days after receiving my money, and only after having a
> PAYPAL complaint filed, and the BAD GUY alert posted here. I saw no need
in
> giving you mine, as my position was simple and clear in my e-mail.

And then some of Dan's one-sidedness comes out, and he figures he can just
move past this, it's old news, blah, blah, blah,

Say, Dan did you call Steve?

LOL!

> There
> was nothing further to discuss.

Dan had the number, but there was nothing further to discuss?

Except on UseNet with a bunck of anonymous people. But certainly not with Steve.

LOL!

> > He declined to call me and declined to give me his phone number
> > for reasons I'll keep private as his email to me was private.

Look at this, Dan, a guy with principals. Just what you were hoping for, right, so that "Steve has better manners than you (a pretty safe bet by what I've seen) and hope that he'll pass on participatung in your one-way pissing contest? That's he's well enough mannered to let even you slide on a little playground bully bravado just stop your yapping?

And it's still looking good as he's not going to stoop to your low level; and post the emails.

Pathetic and despicable in a curious sort of way . . . . .

> The reason is as stated above. I NEVER gave you a reason, Steve. Once
> again, post the e-mails or knock it off.

Gamble looking good so far . . .

> > If you ever chose to do business with Dan Conti in the future. I will be
> > happy to share with you excerpts
> > of Dan's emails to me and urge you to go to www.google.com and do a
usenet
> > search for Dan Conti.

> I have no problem with you submitting my e-mails here or to anyone
> privately. I also have NO problem with anyone doing a search on me. I
> stand by my track record in buying and selling, as well as the posts I've
> made over the years. They are MY opinions and I am entitled to them. We
> can agree to disagree.

Well, not exactly, Dan. You post your whine, and then object when those to whom you sent it disagree with you.

> > While there are some "Good Guy" alerts about Dan, there are also several
> > posts from Dan that appear
> > to be in my opinion "less than adult-like" You decide for yourself.

Steve, I'll take your word for it.

Not Dan's.

> Now it's Steve's turn to attack the victim.

Oooohhh, ooooohhhh, I'm a victim . . . .
Oooohhh, ooooohhhh, I'm a victim . . . .
Everybody feel sorry for me. . . . .
Oooohhh, ooooohhhh, I'm a victim . . . .

> Let's talk about being adult-like...
>
> Adults make a deal or agreement, and then abide by them.
> Adults communicate with each other when there is a problem.
>
> Did you act like an adult Steve?

Well, Dan we really only had your story about Steve's behaviour, but got to observe yours firsthand.

You lost.

Big time.

> > I have tracked this shipment to find delivery attempt has been made to
> Dan's
> > P.O. Box.

And Dan hides behind the ANONYMITY of a P.O. Box!

Care to explain that, hypocritical schoolyard bully?

I THOUGHT NOT.

> > per the
> > USPS tracking website. It is not up to date as compared to UPS and FedEx
> > tracking is, thus his follow up

> > Warning about PayPal. As a result of Dan's complaint to Paypal, (I
don't
> > know what the told them)

Will more of Dan's secrets be revealed?

Stay tuned, boys and girs, as the schoolyard bully gets his ass kickd.

> > they have reversed the payment that was made by Dan.
>
> They haven't reversed anything. It was still under investigation. It has
> now been cancelled by me as promised.

How many more secrets are you hiding, Dan?

LAUGHABLE.

> >The funds reversal was done by Paypal without even hearing from my side.
>
> Steve, come one now. Do I have to re-print the e-mail you sent me where
you
> acknowledged responding to PAYPAL and were given ample opportunity by them
> to state your case. Did you forget what you told them? Enough said.

Yea, right, "Enough said."

You see, Dan, you do have a very questionable track record when it comes to
veracity, so I hope you won't be offended when you story is accepted with a
disclaimer, will you?

Actually, I really don't care of you are offended, because your schoolyard
bully act is offensive to the max.

> > The money came out of my Paypal account that had
> > a balance so my personal banking account was not affected, however it
> could have been >had I transferred the money to my bank account.
> >
> Now you are looking for sympathy.

Pot-kettle-black.

LOL!

> I don't know what PAYPAL did on your end
> with your money, but they sent me NO money from you, nor did they REVERSE
> any payments and you know it. Tell the truth Steve. If you have a
problem
> with PAYPAL, cry to them.

Dan, "But please, please, please, don't reveal the facts here. . . ."

> > I trust that Dan will post that he received the radio and accessories as
> > discussed and thread will end.
> >
> I did so above. I hope this will end.

Dan, "before the rest of the facts come out and I have to apologize. Or
change my name again, or my PO Box."

> However, I was going to make a
> seperate posting on the conclusion of this matter, but since Steve chose
to
> respond here with this nonsense above, I will not. There is NO apology,

Of course not, you self-centered, schoolyard bully boob.

And that as a good bet all along.

> nor
> is there a retraction. If Steve were smart, he will let it die, as he
> obviously will NEVER admit to the action HE took that caused this entire
> mess. I will continue to defend any and all responses and attacks against
> me that I see fit, indefinately.

Still betting that "Steve has better manners than you (a pretty safe bet by
what I've seen) and hope that he'll pass on participatung in your one-way
pissing contest? That's he's well enough mannered to let even you slide on
a little playground bully bravado just stop your yapping?"

You are one transparent jack-ass, "Dan".

> >Can I get a radio with moderate
> >features for less than $200.00?

> Tony,
>
> why don't you think about purchasing an older 'tube type' receiver?

Noooooooooooooooooo.

Please, don't get me wrong. I own a ton of tube hi-fi equipment, and I like it. For most people, though, it's a non-starter. One word: replacement parts. OK, that's two words, but you get my point. It's like crystal scanners: forget it. The old tube stuff makes great room heaters, but for casual listening, stick with modern solid-state gear.

For reviews, try http://www.rnw.nl/realradio/rx_current.html . The DX-398 is reviewed as the Sangean ATS-909.

Radio Shack also has the DX-399 marked down to $40. FWIW, the DX-398 is made in Taiwan, the DX-399 is made in China, the Grundig YB400 is made in China, and the Sony 7600 is made in Japan.

There is a DX-398 Yahoo! group at http://groups.yahoo.com/group/DX398/ . Listers there are reporting on the availability of the DX-398 around the US. There is a DX-399 group, but it's much less active, at http://groups.yahoo.com/group/dx_399_and_ats_606/ .

For $100-150, you can get a fine radio.

> morse code. Only a few nostalgic hams use morse code, no one else.

Thats not true at all. Many hams still use CW, without thinking at all
about nostalga. Also, cars have been in use as long as spark gap
radio. When are you going to dump your car? They do sell small private
helicopters and such, you know.
Overall, this argument means nothing to me, and I must have heard it
401 times. Only when CW is totally useless, would it be worth giving
up totally. And that will never happen anytime soon. I don't care if
something is 400 years old. If it still works, it's still worth using.

>
> > Only the newest of the hams know no code. The vast majority do.
>
> The MAJORITY of hams are no-code technician class! The MINORITY of hams know morse code.

That may be true if the no-codes have passed up the coded in total
licenses, but I bet 1/2 of those no-codes have already given up radio.
Most got a taste, and then faded out once they found they really
couldn't do a whole lot with a no-code license. Almost all hams on the
hf bands know at least 5 wpm. And most no-codes are learning the 5 wpm
sooner or later. Being stuck on 2m rptrs is no way to live, and most
that are still active, are starting to realize it.
>
> > But thats not
> > the real reason. The real reason is it's required by international

> even in the US, getting a doctor's note lets you violate these international laws for some
> reason. Needless to say, international code requirement are going to finally be removed
> officially next year. There is nothing you can do about it.

Why would I want to do anything about it? I have better things to do with my time. I could care less what the tests involve. I'm just commenting on the supposed uselessness of CW, which is a load of caca. It's only useless to those who don't know it. It's very useful to me, and many others that do use it. But I don't have a mental block, or other strange anxieties when it comes to code. It's just another small part of radio to me. People that whine and moan about the code, and use it as an excuse for not getting a ticket, instead of just getting off their lazy asses and learning it, strike me as weinies. There is a lot of crap I had to learn for the written tests that I really have little use for, but I don't spend my time whining about it. And I don't begrudge any of the newer hams that don't learn code. But I don't consider them quite as capable a radio operator either. "Note I say radio operator, not ham!" But thats their choice. But less is never more. Some get confused, and think less is equal or even more if they use new enough fangled gadgets. I use all the new modes too, and still would prefer CW most of the time. It's more fun. Most of the newer modes are really pretty boring once the new wears off. Sorry, if this strayed for the original topic, but I get tired of hearing code inaccurately slammed by people that have probably never even used it, much less learn it. They really don't seem to have a clue about what it's like to be a regular user of cw. Note the "only can work far off dx" part...I can work cw to anywhere that I can work any other mode. In fact, many qso's are fairly close in. "IE: 40m in the daytime". On 40m at night, CW is the mode of choice if you do want to work dx. You won't be working much on phone, unless you work split. If I didn't or couldn't work cw, I would never get to work europe on 40m. Maybe thats ok to the no-coder, but I couldn't live like that myself. Some of the best dx I hear is on 30m. But if you don't work cw, even a visa or mastercard won't help you on that band. I guess you can use a puter CW program, but it's not near as good a performer as noodleware.

I've seen some cassette tape recorders (in particular I'm looking for a mini-size one that takes regular cassettes) that can record at 2X or 3X slower for voice, to get 120 or 180 minutes on a C-60 tape. Can such a recording be played back on a regular tape player and sound like the original, or does it need to be played back on a 1/2X or 1/3X speed player e.g. the recorder itself?

Thanks-R.

Well, think about it. If you play the tape back at 2x the speed
it's recorded, all tones will be shifted up an octave and it will take 1/2
the time for it to happen. Think "Alvin and the Chipmunks" on speed ...

You'll need to play it back on the same (or a compatible!) recorder.

> Chris

Hello Chris
I'm interested in knowing if the new scanners will receive the
APCO P-25 9600 and 3600 bauds too.
Livingston County, MI. has been using the new digital system
for 4 years plus now. Take the following with a grain of salt,
because I don't know much about the system. I recall reading
on a web site I can't locate now, that 9600 baud was the
standard......and it got my attention when the article said:
"ONLY Michigan" was using the 3600 baud rate. I remember
this because it was very disappointing at the time. Perhaps the
article is wrong.....don't know. Anyway, there is some info on
the below listed sites that may help you. I'm in the "Wait and See"
mode. The scanners are supposed to be capable of using both
9600 and 3600 baud rates at the same time. See below info's.

http://www.snowcrest.net/marnells/digital-scanner.htm

Scroll down to the "More News and Specs" area. The "specs"
say both 9600 and 3600 bauds will work, but not for the
"Encrypted Level III" use. General dispatching/responding is okay.

http://www.usascan.com/files/bc785d.cfm

This is Communications Electronics Inc. Ann Arbor, MI. store.
I've emailed and called them, but got some "fuzzy" info if the
scanners are going to work in MI. - so I'll wait.

> Not only are the Techs a majority (don't forget that most of the other classes on your census are
> from dead people and those not in ham radio anymore)

The up-to-date census (as of 10/22/02) based on FCC records shows that
Tech licensees make up about 1/3 of all hams. See:

http://www.qrz.com/i/census.html?

What proof do you have to support your assertion that No-code Techs
are a majority of hams?

Look at the license renewal rates for the original No-Code Techs
(their licenses started coming up for renewal in February 2001) and
you will see they are dropping out faster than other classes. As for
"dead people," some of the Techs listed in the data base are dead too!

HERE Is a fax dated 10/16 from Uniden that may clear things up. It states in part:
"These new scanners will be able to monitor 3 of the 4 types of APCO Project 25 systems. They are: Conventional P-25; Trunked at 3600 baud; Mixed Mode at 3600 baud.
The APCO P-25 Trunked system at 3600 bd is the most common P-25 system in operation today. The "Other" P-25 trunked system operates totally digital at 9600bd. The ability to monitor these systems is still in development. The BC-250D & 785D will Not monitor these systems. A few agencies that use this system include the states of Michigan, Colorado, Minnesota & the city of Austin, Texas...."
The fax goes on to say that these are the first of a new generation of Uniden Digital scanners, & future models will cover additional systems. Hop this info Helps!

from your remarks, I see you haven't talked to any of the Generals or Extras in your area and quized
them to see if they actually still or ever knew morse code. Don't ASK them if they still know it,
punch out something in code and see if they can tell you what you sent! The results will shock the
hell out of someone like yourself. Of course, I am assuming that YOU even remember any of the code
yourself to do this experiment!

Of course you do. Only someone as pro-code as you are would actually know and use it.

NEW DISCLAIMER....

I will no longer respond to idiotic replies to my posts made by trolls for the sole reason of trying to
keep an argument going. My statements can be easily understood and are always facts. If you reply to
one of my posts and I don't respond, it means your reply was so idiotic that I can not waste time
responding to it. The fact that anyone responds to this post shows that they believe the opposite,
that my post is worth the time to respond, which therefore will prove my point. Thanks in advance for
proving me right.

I can't believe it. Most nights, I tune in for the first five minutes,
to see who is on. Usually, I am disappointed and it is the usual saucers
and stuff that is on most of the time. I didn't bother last night, and it
turns out to be someone different from the usual topics, and someone I
would have listened to at least for a while.

It seems a shame, because it is neat that there's an overnight show
that is different from the usual talk show circuit. But too often
the show is about the esoteric, rather than the intriguing.

By the way, according to a bulletin I saw the other day, Kevin Mitnick
is selling off some of his computers, if I remember properly to pay
his legal fees. Perhaps the timing of his appearance lastnight is
connected with that.

I just got a new/used PRO-2045 and can't find any info in the RS manual about clearing memories. My PRO-64 has a nice clear memory bank function, and I admit I'm spoiled. Is there any way way to clear a whole memory bank without entering zeros one channel at a time? And if anyone has any Uniden keypad tricks that apply to RS scanners, I'd like to hear about those too.

TIA,
Jim

Whether or not it can be moded to receive the cellular freqs- which is
pretty moot these days as most all of it is digital...

I agree people who have put in more effort to earn greater privileges
are less likely to loose interest, but I think what you're observing is
largely because newer people are more likely to loose interest than long
term ones.

It works that way with most hobbies and organizations.

I have previously corresponded with this individual regarding monitoring the Riverside CA Sheriff frequencies. I sent him an email last night and it came back saying the account no longer existed.

Does anyone know how to get in touch with him? I need some more advice.

Thanks in advance.

And remember that they came in much better from MD than CO. Of course, I have a much better reciever and antenna now than I did then. Back then, the rig was a floor model Philco with all of the worlds stations marked on the dial for your convenience. My mother's wedding present to my dad. :-)

Sorry for posting here but I put this scanner up on Ebay but they took it off (because it picks up non-digital cell phones in the 895-925 mhz range), so if anyone here is interested it comes with the original instruction manual, charging stand, extra battery, and rubber antenna that came with it. It's in great condition, the stats on it are :
-200 channels
-twin turbo scanning
-12 bands
-10 priority channels
-preprogrammed service search
-data skip
-memory backup
-backlight display

If there's any interest email me at fatalerr@kc.rr.com

Also, have you taken into your assumption that the relaxation of vanity call signs may have a lot to do with this. Remember, you have to give up that original call to get a vanity one. Overall, the entire service is loosing ground.

Once, when he was arrested, he was shackled to a bench with his hand cuffs behind his back. The judge was so afraid of Kevin he wouldn't even undo the cuffs so Kevin could dial the phone to call an attorney! He told them the number and they dialed it then held the phone to his ear.

How do I know? Kevin told me.

They had reason to be afraid - once he showed me how to dial a special three digit number that would shut off all phones in a specific grid.

Nice guy but dangerous.....hehehe

Up your ASS you ugly faggot. It is easier for people walking
to get out of MY way, bitch.
I don't think life fuck me over at all.... I think it fucked YOU over.
Well, we know what YOU do in the doghouse you ugly sick
fuck!

4058. About the Pro-92

Newsgroup: rec.radio.scanner
Date: 2002-10-23 03:24:35 UTC
From: Rooker <Nospam@hotmail.com>
Message-ID: <i85crusgu418gn5hnuk0lgsh9f0ol1i9t8@4ax.com>
Source record: 42398

I recently had the opportunity to buy a Radio Shack Pro-92 scanner (very cheaply) from a friend who upgraded to something else. I love the feature that allows you to program a text name into the system, but entering that darn keypad is a nightmare! Tried to find a data cable at Radio Shack...no luck. Found a couple of "suppliers" online but I've never heard of them before so I'm asking the group if any of you have ordered a Pro92 data cable from anyone and if so were you pleased with what you got?

Secondly, it seems like my trusty old Pro-46 has better sensitivity than this Pro-92. Is this common? I'd think that a unit that much newer would perform better. Anyone have a good (but not too expensive) antenna suggestion to help the Pro-92?

Thanks

That's gotta be an urban legend. The phone company wouldn't be that
dumb. Random people dialing wrong numbers would eventually hit
that 3 digit number....

Visit

http://www.pro-92.com/pcifcable.htm

for info on buying or building a cable. Purple Computing is
outstanding to deal with.

For software, Win92 is by far the best choice. Click the "Software"
link onthe upper right of that page.

If you've stumbled on pro92.com, you don't want anything to do with
his software. He does sell the cable alone for less at pro93.com.

>Secondly, it seems like my trusty old Pro-46 has better sensitivity

PRO-92s have a reputation for unit-to-unit differences in sensitivity,
due to inconsistent alignment.

The archives at the Yahoo! PRO92 group have a lot of info on this
radio and various antennas.

http://groups.yahoo.com/group/pro92

A lot of great folks in that group. pro-92.com has a first rate
discussion board (really the primary place for PRO-92 talk), but the
board there has been down for a while.

All I can say is I tried it from a pay phone and it worked. All the pay
phones went dead and my home line 3 blocks away also went dead. They all
came back inservice after 5 minutes.

107 messages with "BAD GUY ALERT! - Steven A. Giron AD6GO" in the subject.

Dictionary definition of "bad guy" = "villain"

Dictionary definition of "good guy"="a person viewed favourably in a conflict" - surprising, I thought it would say "hero".
----------Confusing, isn't it? Do these words mean something else in these newsgroups than they do in common usage?

Will we ever see the subject:
"RETRACTION of BAD GUY ALERT! - Steven A. Giron AD6GO"
or
"APOLOGY for BAD GUY ALERT! - Steven A. Giron AD6GO"?

Will this squabble end with any grace or simply peter out when hotheads cool down to a simmer and leave for other threads bearing a grudge?

As someone else has noted, Dan lost the public relations war (at least with the chattering public) long before Steve reappeared, whether their agreement was breached or not. Seems like Dan is being characterised as the 'bad guy' and Steve as the 'good guy'. A number of commentators opined that Dan was premature in concluding that he had been burned and in launching his Bad Guy Alert after only 8 days. He did not show any concern for Steve's well-being - a trusted vendor who failed to deliver as promised, in sharp contrast to his previous satisfactory dealings - that there might be extenuating circumstances.

Steve has, belatedly, fulfilled his side of the agreement but finds that Dan's actions with PayPal have resulted in loss of payment. Dan says - take it up with PayPal; he doesn't have the money.

Dan, having early on lost almost all sympathy for his position is slagged with verbal abuse and responds to every shot, now declaring, after Steve's 'distortion of the facts' that he will not retract, let alone apologise.

Maybe they are both at fault - Steve for negligence and Dan for unjustifiably launching this sordid mess. And those who have stooped to character assassination, foul language, and argumentum ad nauseam ought to be ashamed.

Somebody characterised Dan as a 'schoolyard bully'; I think the 'schoolyard' is an apt description of the squabble we have been witnessing but I disagree with the 'bully' part. Question is: how is this squabble going to be settled?

I think it's going to take some deep breaths and a relaxation of the keyboard trigger fingers. If Steve was negligent in fulfilling his promise of delivery, he should own up to that. And Dan, the toughest but the most honourable thing for you to do is to post that message titled "APOLOGY for BAD GUY ALERT! - Steven A. Giron AD6GO". It should be a sincere apology to Steve for having jumped to the wrong conclusion and declaring him a "Bad Guy", a villain. And maybe the rest of us can say "Good, Guys; let's go play with our radios".

Regards,

Tom

No, Dan got what he wanted. Attention.

> or
> "APOLOGY for BAD GUY ALERT! - Steven A. Giron AD6GO"?

No, Dan got what he wanted. Attention.

> Will this squabble end with any grace

No. Not an apology from The Schoolyard Bully.

> or simply peter out when hotheads cool

He did a pretty good job of misrepresenting the "facts"?

> Alert after only 8 days. He did not show any concern for Steve's
> well-being - a trusted vendor who failed to deliver as promised, in sharp

A typical sociopath, Dan's only interested in himself.

> Steve has, belatedly, fulfilled his side of the agreement but finds that
> Dan's actions with PayPal have resulted in loss of payment. Dan says -
take
> it up with PayPal; he doesn't have the money.

Is that right?

Given what Dan has taught us about Dan, payment will be problematic.

> Dan, having early on lost almost all sympathy for his position is slagged
> with verbal abuse and responds to every shot, now declaring, after Steve's
> 'distortion of the facts' that he will not retract, let alone apologise.

Exactly as I predicted.

I think this post might give some insight regarding Dan's feelings:

<http://groups.google.com/groups?q=dan+conti+rats+ass&hl=en&lr=&ie=UTF-8&selm=MIsg9.35264%24hh.8781752%40twister.nyc.rr.com&rnum=1>

4068. Re: What do I look for in a shortwave receiver?

>Nooooooooooooooooo.
>
>Please, don't get me wrong. I own a ton of tube hi-fi equipment,

Hi-fi??I thought we were talking about 'shortwave'.
>One word:
>replacement parts. OK, that's two words, but you get my point.

What about them, they are 'abundant'......they are everywhere, maybe I'm missing something. {?}

> It's
>like crystal scanners: forget it.

Now that makes sense, definitely. But that's with scanners. With shortwave, it would make no sense to shy away because of 'replacement parts'???

>The old tube stuff makes great room
>heaters, but for casual listening, stick with modern solid-state gear.

I have to disagree. I agree with the 'heater thing'. ;-) But for 'casual listening' as you said, it is ABSOLUTELY the best.....hands down. May I ask, and I'm not being facetious either. Have you ever listened to ANY Hammarlund HQ model before.......shortwave or BCB?? I don't think you have, because IMO.....much of what you have said just doesn't make sense. I don't mean that to upset you either, if it does, I apologize.

**I have the radios that you are talking about, and either one of my Hammarlunds, the ones on the way.......makes the 399 or the 398 look like a toy. Now that is the truth.

WA8007SWL

HQ140X/ HQ129X/ JRC NRD-515 / DX398 / Ross Model 2311/ RCA Victor Strato-World/ DX-399/ DX394/ DX402/ DX100/ Kloss Model One/ Rhapsody Multi-Band

Looks like old Dan Conti is a bit of a professional "victim".

A typical sociopath, he cares only about himself.

>snip<

I second that. Larry is a gentleman of the first order (whatever that means?)! This guy developed his own connector for the Garmin GPS units (for HAMs to use with APRS), had them fabricated, then shipped them out to people on the honor system. If you were happy with them, then you sent him whatever you thought was appropriate. Here is the link to that story: http://www.pfranc.com/projects/g45contr/g45_idx.htm

Here is what you need for the scanner programming:

cable http://www.pfranc.com/pclink/ScannerDeal.shtml

software http://www.starrsoft.com/freeware/win92/

BTW, the antenna supplied with the Pro-92 is your typical "flexible dummy load". Replace it with a better antenna, even the one sold by Radio Shack (20-034), and you'll get better results.

4076. Re: JohnW is <idiot rant snipped>

Newsgroup: rec.radio.scanner
Date: 2002-10-23 07:53:48 UTC
From: Kanberi <pti@capnet.com>
Message-ID: <3DB6558B.427E3D7D@capnet.com>
Source record: 42418

Piss off. It doesn't bother me if a few old farts don't have a
sense of humor.

BTW Read my latest Radio Shack employee story.

Last week I went into Rad Shack and seen the same punk ass
geek that dared to back talk to me a few weeks back.
I just burned my eyes into him until he looked away. He came
over and asked me if I needed any help and I said, "If I need
any help from you, low life, I'll tell you... now you're dismissed"
This upset me.. again.. so I went in the back aisle near the
overpriced antenna masts and defecated onto an antenna rotor box.
Splatter city man.

I must say this about Dan. A few years ago I bought a Sony 7600G from him. The radio was like new!!! as Dan advertised and he shipped it the same day he received my money order, for what it's worth. I wouldn't be afraid to deal with Dan.

Ken,

TXU is using an EDACS systems for statewide power distribution operation.

Check out the Trunked Radio Database at http://www.trunkedradio.net for
information on this system.

OTOH, it could be a useful tool for the police, if they weren't such incompetent boobs. They could use a combination of borrowed digital equipment and cell phones for actual communications, and use at least some of the published frequencies for disinformation, aimed at the sniper.

During some of the interstate exit-blocking exercises (in futility, apparently), VSP indicated which exits weren't yet covered/blocked. It occurred to me that it might be disinformation aimed at someone who had a scanner and was looking for an escape route.

Alas, those exits really WERE uncovered... after the first Spotsylvania County shooting, it took nearly an hour to get the exits blocked, and at least one was still uncovered an hour and a half after the shooting. The murderer could've gotten away even if he'd been on a bicycle.

The Bearcat Five-Six is a five band, six channel crystal
controlled handheld model which covers the VHF-aircraft
band. It looks just like the Four-Six, which is more
popular and lacked airband coverage. Both were manufactured
in Japan.

The Bearcat 15 is a base/mobile, 10 channel model which
covers the aircraft band. It was made for Electra by GRE.

I have had my ham general ticket since 1974. I have no intention on taking another 50 question test for my extra just for a little bit more of band width. There's no other perks that go along with being an extra unless it's about ego for being an extra.

The FCC has made it a bit easier by reducing the code, that was a good move on their part. I'm not a code enthusiast.

EXACTLY! A General has the use of every single band an Extra does! WHY would an Extra need to know and be tested on more theory than a General?! If this theory was actually IMPORTANT to know, then the General should have to know it too since he is using the same bands and equipment! It makes sense for a General to have to know more about shortwave bands and propagation than a Technician does, but it makes absolutely no sense that an Extra Class needs to be tested on anything more than a General does.

This PROVES that it is only to divide Hams into different classes and groups so that some can feel more superior than others in the hobby. I can understand why someone who wants to talk on shortwave would upgrade from Tech to General, but I can't for the life of me understand why someone would "upgrade" from General to Extra unless just to show off and feel better than a General class ham.

> The FCC has made it a bit easier by reducing the code, that was a good move
> on their part. I'm not a code enthusiast.

It really wasn't their choice! Just as eliminating the license for CB radio was not their choice. These choices are made by the people. When the people stick together unanimously, the government is forced to change their laws when they are no longer able to enforce them.

If they didn't eliminate the code from the Tech class, there would not have been enough hams around to help with many emergencies like 9/11 the past decade or so. Reducing the code is an attempt to get more people to be licensed to use the HF bands, but they are starting to see that just reducing it is not having the rush of new General class licenses as they had with Technician class.

Next year the code requirement will be dropped altogether for every class! Remember that I told you this now, so you don't think that the FCC made this decision next year on their own when it happens. This is out of their control. The government NEEDS hams, we don't NEED to help them. We don't want to learn something we have no intention of ever using, so the ball is now in their court, and you will see they MUST and WILL eliminate code next year when the rest of the world agrees that it is time for it to be gone.

You do hide behind a PO Box.

And we don't know that "Dan Conti" is your name or that dconti@nj.rr.com is
you email address.

And we do know, now that Steve has responded, that you do shave the truth a
bit.

Well... I think you're both right and wrong here.

I agree with you that no additional skills, above and beyond those required by the General ticket, are technically required to _operate_ in the Extra bands. In that sense, you're right. The extra learning and theory is not necessary for _you_ personally.

That isn't the point, though. It isn't all about you (or about me, or about any other ham individually).

The way that I see it (and the way that I read the Federal legislation which defines the Amateur Radio system), one of the big purposes of the Amateur Radio system is to help advance the state-of-the-art of radio itself, and to encourage and cultivate a community of people who are skilled in the art. This serves the "public good" and is a big part of what justifies setting aside some pretty big chunks of the RF spectrum for amateur (nonprofessional use). [There are a lot of other groups fighting for spectrum space, and many of them are willing to pay millions (even billions I think) of dollars to the Government in order to "buy" spectrum for commercial uses.]

Having amateurs who are willing to go the extra mile, and learn a bunch of additional "unnecessary" theory and electronics skills, helps encourage innovation both within the amateur community, and in the society as a whole. It enables amateurs to contribute to, and help advance, the state-of-the-art in amateur operations, and many of these advances end up reflecting back into other areas of radio and electronics.

The Extra-class license exists, with its "perks" of added operating sub-bands, as an incentive to encourage amateurs to improve their own

skill levels to those *beyond* the ones needed to simply operate in the bands... because it's believed (by the people who set up the system) that having a cohort of amateurs with those sorts of advanced skills is good for the health of the sciences in the U.S. and thus for the good of the public as a whole.

I was just reading some letters and editorials in EE Times magazine, about the rather dire state of the job market for skilled electrical engineers here in the U.S. A lot of very good EEs are out of work, as a result of the .BOMB downturn, and as the result of many companies' decisions to "export" the EE design work to overseas locations to save money. Things don't look as if they'll get a lot better in the near future. Enrollment in EE college degrees is down... a lot... as a result of the poor job/career prospects in this profession, and the U.S. may very well find itself rather starved for skilled EEs in the years go on.

Having some amateur-radio operators who are willing to buck this trend, and improve their skill sets, may be very important.

Speaking for myself... one of the reasons I chose to go for the Extra ticket, once I got my Technician license, was precisely because of the advanced theory required. It gave me both the incentive, and the opportunity, to learn quite a bit that was new to me, and it opened the door to additional opportunities to learn and understand.

There are already several classes of civilian radio capability available to pretty much anyone, without regard to skill or training or ability - CB and FRS are the two most obvious (and one could argue that cellphones are yet another). I'm glad to see that there's still one which, by its very definition and terms, requires its participants to learn and to improve their knowledge and abilities.

If "pushing" yourself through the advanced theory isn't your own path, that's cool... nobody says that you have to. I do feel, though, that having the Extra class (and the very modest perks which come with it) does serve a reasonable and valid purpose for amateur radio, and I'd be a bit sorry to see it eliminated.

The Bearcat III or IV won't then? Damn. I am wanting a base unit crystal scanner that will cover the VHF Aircraft band.

Thanks for answering Bob.

He swore up and down this would work with the pro-95 and that he had sold many of them for the pro-93....

We finally convinced him that this cd and cable doesn't work with th 93 and 95. I have acquired the correct sw and hardware from alternative sources and all is well now !

I concur it's an error in the documentation that designates the wrong plug (C) for both the Pro93 and Pro95 YOU NEED THE B SIZE PLUG/ADAPTER. MESSAGE DOESN'T SEEM TO HAVE REACHED THE LOCAL STORE PERSONNEL.

> that 3 digit number....

Well, there ARE ways to shut down a node. But hardly with 3 digits.
That's undoubtedly BS.

Back when the DTMF was a 3x4 matrix for customers (and 4x4 matrix for
control like on some HAM HTs) the 'phone company matrix was
quite different, and those extra keys....

Well, time to leave that one alone.

3 digits to shut down a node now? Yeah, right. And you found those
three digits written on a piece of paper in that Corvette for $50 every
knows about from the 60's!

WAIT!! Was there a black helicopter involved?

>
> That isn't the point, though.

We know it isn't. I pointed out what the point was. To separate hams into different groups or "classes" and we all know what problems that causes. We need to learn to UNITE together, rather than to separate ourselves into classes. Isn't it bad enough that we are separated into classes by race? Do we really need to add MORE classes to cause MORE problems? We need to make ONE class of ham license.

> The way that I see it (and the way that I read the Federal legislation

Right, not separate people into more sub groups and classes.

> This serves the "public good" and is a big
> part of what justifies setting aside some pretty big chunks of the RF
> spectrum for amateur (nonprofessional use). [There are a lot of other
> groups fighting for spectrum space, and many of them are willing to
> pay millions (even billions I think) of dollars to the Government in
> order to "buy" spectrum for commercial uses.]

Right, so what does Ham radio do? They make certain parts of bands that can only be used by the smallest minority of Hams that are Extras. When these parts are not being used, they will be taken away and put up for auction. Allowing all hams to use all parts of all bands designated for ham use does several things...

1) It makes those parts of the bands USED more which means they have less chance of being taken away.
2) It doesn't have certain portions of bands where an Extra can't talk to anyone else but another Extra! If there was a part of the radio spectrum where only one race could talk to another race, boy would there be protests and outrage! This is really no different, other than the fact instead of skin color being different, we invented another way to put people into groups that was not necessary.

> Having amateurs who are willing to go the extra mile, and learn a
> bunch of additional "unnecessary" theory and electronics skills, helps
> encourage innovation both within the amateur community, and in the
> society as a whole.

That is wrong. You should never have to learn "unnecessary" things. There was a reason hams were required to learn code back in the old days, it was because they were required to pass along military communications in times of emergency. Now that the military no longer uses code, this requirement is unnecessary. When people say that more theory or something should replace the code requirement if the code requirement is dropped so that it is not as easy to get the license is not understanding the point AT ALL!
The code requirement was NEVER to make it harder, or another hurdle to jump over to keep the "rif raf" off the bands! It actually had a purpose for being a requirement! That purpose no longer exists for many years now. We should not make it HARDER for someone to get a ham license, we should make it as easy as possible! The only reason we NEED to make sure some theory and technical knowledge is known first, is because we are allowing them to run transmitters with hundreds of watts output! If the power limit was limited to a few milliwatts, no one would need to be tested at all, and is why no license is needed for CB or FRS radios. (They don't need to know code either) The power output used, and the fact that hams are allowed to make their own transmitters is why we want to make sure they know something first as this could cause lots of interference and other problems to public safety if they don't! Not knowing the code will have no effect on these problems at all!

> It enables amateurs to contribute to, and help
> advance, the state-of-the-art in amateur operations, and many of these
> advances end up reflecting back into other areas of radio and
> electronics.

Right. And code has nothing to do with any of that.

> The Extra-class license exists, with its "perks" of added operating
> sub-bands, as an incentive to encourage amateurs to improve their own
> skill levels to those *beyond* the ones needed to simply operate in
> the bands...

What incentive? There are no other bands to use. A General can access the same bands as an Extra. What incentive is there? One should want to learn more so they know more, not so that they can talk on a few special sections of those bands where no Generals will be allowed to talk. If anything, the incentive is that you get to be a snob. Some incentive.

> because it's believed (by the people who set up the
> system) that having a cohort of amateurs with those sorts of advanced
> skills is good for the health of the sciences in the U.S. and thus for
> the good of the public as a whole.

It is understandable why you would need to learn more and be tested more to operate on HF bands as opposed to 6 meters and above. It is understandable that you should not force someone who wants to only operate on VHF and above to learn all the crap and be tested on HF stuff, just as no one should have to learn code if they don't want to use it. You can speak Russian on Ham radio if you want to, but we don't force ALL hams to learn Russian before they are allowed to speak English on the ham bands, do we?

> I was just reading some letters and editorials in EE Times magazine,

>
> Having some amateur-radio operators who are willing to buck this
> trend, and improve their skill sets, may be very important.

And this current trend is happening while the Ham radio requirements and classes are set up as they are right now! Perhaps if we make just one class and drop the code altogether, and make it as EASY and ENJOYABLE as possible to become a ham, more people will become hams, and then this will lead to harder electronics and careers. (to steal from the anti-drug campaign slogan)

After all, it was the fact that I could buy a CB for $5 at a flea market without needing a license that got me started and how I eventually became a ham. I had to learn the code and therefore, couldn't talk to a lot of my friends who had a hard time learning it, so I had much more fun on the CB, even after getting my ham license.
When the code requirement for 2 meters was dropped, my wife was able to get her license and ham radio became more fun. The code has stopped a lot of my friends with good technical skills that far surpass many Extra hams from being able to talk on radios when they were repairing similar radios with their General Class Commercial FCC licenses. If you have seen the Extra exams, most of the questions are taken from the GROL exam and worded exactly the same!

> Speaking for myself... one of the reasons I chose to go for the Extra
> ticket, once I got my Technician license, was precisely because of the
> advanced theory required. It gave me both the incentive, and the
> opportunity, to learn quite a bit that was new to me, and it opened
> the door to additional opportunities to learn and understand.

I already know the Extra theory and MORE and have the GROL license. Next year when the code requirement is dropped, I could take the test in 5 minutes and get my Extra,

but I don't see any need to do that. As a matter of fact, I would never want to talk on portions of a band where none of my friends and family would be allowed to talk. I'm not that kind of person. It takes a special kind of person to be like that.

> There are already several classes of civilian radio capability
> available to pretty much anyone, without regard to skill or training
> or ability - CB and FRS are the two most obvious (and one could argue
> that cellphones are yet another). I'm glad to see that there's still
> one which, by its very definition and terms, requires its participants
> to learn and to improve their knowledge and abilities.

You mean FORCES them to pass a multiple choice test. Many of them never know anything about what they are being "tested" on, they only memorized the answers. People who used CB learned on their own about antenna systems, how to fix their radios (although this was technically illegal) and how to fox hunt and track down other CBers. They learned this because they wanted to, not because the law forced them to.

Many people now HATE the code only because it is something that is being forced on them as a requirement.
When the code requirement is eliminated, I predict that code use and learning will INCREASE! Once you take away that "YOU HAVE TO LEARN THIS" away, people will actually start learning it on their own because they WANT to learn it for fun and nostalgia. The same way people learn other modes on Ham radio that are not a requirement.

> If "pushing" yourself through the advanced theory isn't your own
> path, that's cool... nobody says that you have to. I do feel, though,
> that having the Extra class (and the very modest perks which come with
> it)

The only perks are that you get to be a member of an exclusive snob club.

> does serve a reasonable and valid purpose for amateur radio, and
> I'd be a bit sorry to see it eliminated.

That's like saying you would be sorry to see racism be eliminated. I would rather see all the separate classes of ham radio go away and everyone be on the same team! Instead of being at a hamfest and having someone ask me what class license I have which is like asking what religion or race I am, I would like it if no one could ever ask that and all hams could just look at each other as EQUALS.

No more of this "Let's go talk on the exclusive Extra channel so no Generals can bother us" crap.

> General to Extra unless just to show off and feel better than a General class
> ham.

We didn't make the rules. The fcc decided years ago "about 1968" that
hams were becoming appliance operators for the most part, and decided
to use incentive licensing to encourage more learning of theory, and
yes, they threw in code also, but the theory was the main concern.
Whether or not it was a good idea, I won't guess...I know many of
those generals that had full privileges, and then lost portions
overnight, were bent severely out of shape. Don't blame em , really...
I have been a novice,general, advanced, and extra, and I haven't
noticed any change in the way I feel. I sure don't feel better. If
anything due to aging, I feel crappier. The main reason I upgraded was
to get a shorter callsign while the pickings were good. Most of the
decent ones are gone now. But I also get to do more things than when I
was a general. Lets take the russian sat's. You can't work the 15m-10m
mode unless you are at least advanced. Lets take DX on 40m. The best
dx on 40m is the extra class CW portion. Above 7.025 , the dx falls
off fast from EU. Some up to 7.035 or so, but scads of them below
7.025. That in itself makes it worth the trouble to me. I almost never
use the extra phone bands, so I could care less about those. But it
does give you place to get away from the "crowd". Can be real handy on
75m at night. You can't hardly find a place to sit in the general
band. I almost never see cases where extras act "superior" on the ham
bands. Thats mainly a figment of the imaginations of a few non hams.
All the people I talk to could care less what class I have.

I'm sorry, but you must be high....There has never been a shortage of
hams to do anything.

Reducing the code is an attempt to get more people to be licensed
to
> use the HF bands, but they are starting to see that just reducing it is not
> having the rush of new General class licenses as they had with Technician class.

You sure had a rush of generals going to extra though. I wonder why
they all felt it was worth it?
>
> Next year the code requirement will be dropped altogether for every class!
> Remember that I told you this now, so you don't think that the FCC made this
> decision next year on their own when it happens.

Duh....The fcc will drop the code when WARC does, mainly because the
radio makers "icom, kenwood, yaesu" will be on their asses to do so.
Money talks, the rest walks...

This is out of their
> control. The government NEEDS hams, we don't NEED to help them. We don't
> want to learn something we have no intention of ever using, so the ball is now
> in their court, and you will see they MUST and WILL eliminate code next year
> when the rest of the world agrees that it is time for it to be gone.

They probably will if WARC does, but it's no great secret. And really
not related to us hams much at all. But the fcc doesn't HAVE to do
anything. There is not, and never has been a shortage of amateur radio
operators. When they drop code, all it will amount to is a slight
reduction in the amount of knowledge required to get a ham ticket. No
more, and no less. Myself, I think dumbing down the exams is a
mistake, but I'm not going to whine about it. The tests we have now,
even for the extra, are a joke compared to the exams given in the
1960's. You had to actually know what you were doing back then. Now,
any dumbass can get an extra. I've seen 12 year olds pass it, that
couldn't change a tube in a HW-101 without someone holding their hand
in the real world. It's really no big deal, and we hams know it. Or
most of us, anyway... It's only the outsiders that seem to have
anxieties about this from what I see. That, and maybe tightass people
with paper thin skins. Most of the people I talk to are rednecks, with
no such skin problems. MK

So just how technical would you make the exam for the one class of
ham license? If there is only one class of license, then the exam
needs to cover a lot, most of what would be on the tech, general
and extra tests. So now what do you do about an entry level class
of license to get people into ham radio? How many would be
discouraged at having to learn all the material at one time to get
this one class of license?

for sale:

motorola 4 channel radio model cdm 750

i don't know much about this radio.
it comes with microphone and mounting bracket

brochure says this about it:

12.5/25 khz switchable, remote mountable controlhead, data capable,
low poer 40watts, high power 60watts., selective radio inhibited,
x-pand radio enhancement, multicolored led indicators, 2 customized
function buttons, monitor/permanent monitor, scan, mdc1200 encode
caller id code

the model number is AA25Axc9AA1an
very nice condition

70.00US + 5.00 for shipping

thanks

You seem unclear about the concept of license class and operating privlages.

Take your typical state drivers license. Your basic automobile license will not let you operate a motorcycle or a semi-tractor. This does not imply that you are a lesser person than those who hold licenses for motorcycles and tractor trailor rigs.

Take your non typical pilot's certificate (license of sorts) which grants you privlages for single engine, multi engine, complex, commercial, rotary wing helicopter, hot air balloon, etc etc etc. This does not imply that the holder of a single engine private pilot's certificate is any lesser a human than a multi-engine commercial pilot.

Now, if your reasoning were applied to pilot's certificates, would you put your wife and kids in a Boeing 747 piloted by lil ole me with a private pilot, single engine certificate??? I dont think so!

Steve

Code is an antiquated mode of communicating that should be OPTIONAL and not mandatory to operate on HF. In this day and age of digital communication, there is no reason to require code proficiency.

>Did Bearcat ever make a crystal scanner that covered the aircraft band?

The old Electra Bearcat III would accept 2 front end boards. They had 4 available, I think at the time they were about $12.00 ea. I forget the exact coverage of each but the ones available were, VHF Lo, VHF HI, UHF and the AM Aircraft band.
I still have the BC III that I bought new back in the early 60's and have all the boards except the aircraft one. It was a great scanner in it's day, awesome audio.

I think the Federal Government should provide a free rig to every person who passes the simple one class ham license. After all, if we don't do that then hams will still be divided into classes based upon how expensive a rig they can afford to buy. :-)

> and extra tests.

No, not what is on the extra tests. A General is allowed to operate ALL the bands an Extra does, so the General test obviously must have all the necessary testing needed to operate those bands.

A General exam is not that much more than the Tech test as it is the next step up. The only thing that made it hard for people to get a license was the code. After the code was dropped in the Tech class, thousands of people were able to become hams that never before were allowed to. The theory and rules part of the test is not hard. Many holders of GROLs never got ham licenses only because of the code.

Basically, all you need is the General class, but it would just be called a Ham license, no class needed.

> So now what do you do about an entry level class
> of license to get people into ham radio?

This would be the entry level. It is only a few questions more than it is now. Basically, all you need to know is what is relevant to the propagation and rules relating to HF.

> How many would be
> discouraged at having to learn all the material at one time to get
> this one class of license?

Actually, it would be EASIER than it was a few years ago! The entry level Tech required passing the NOVICE test first! Then you had to take the Tech test too! Now they only require Techs to take the test exam and dropped the Novice class altogether. By just adding the few General questions needed to be aware of the differences of HF to the Tech test, you really made it no harder than the way the No-code Tech tests were when they first came out!

The different classes are necessary here because you are being tested on DIFFERENT vehicles! No need to test someone on driving a semi truck if they only want to drive a car! (No need to be tested on code if you only want to TALK on HF!) The Extra class gives you NO ADDITIONAL band use from a General. What type of DRIVER'S LICENSE in your analogy means additional testing to drive the exact same vehicles as a lower class driver's license?????

The key thing here is to operate by using a MICROPHONE on HF.

If you WANT to use code, then you have to learn code. If you only want to use a microphone and TALK on HF, there is no need to learn code.

Likewise, a person who is unable to speak because of a birth defect or injury, does not have to be tested on how to speak into a microphone if all they want to do is use morse code.

When you get a fishing license, you do not have to pass a test on your ability to understand Russian.

Why do you have to learn the Russian language before you can get a driver's
license?

.......you DON'T. and YOU would then also "bitch" "Why do I have to learn
Russian to get a driver's license?" with the rest of us logical thinkers.

The questions are....

Why do I have to learn morse code in order to use a microphone?

Why do I have to take an Extra test in order to use the same bands as a General?

The Extra class needs to be eliminated altogether. The code requirement needs to
be eliminated altogether.
Those that wish to USE morse code, can then learn the code.

This is all common sense, sorry that is a new thing for you.

> How about the theory of getting more for doing more? More effort =
> more privileges.

There are no more privileges from General to Extra. NONE. Unless of course
the few channels set aside on the same General bands that only Extra snobs can
talk to other Extra snobs without having to talk to any Generals. In an
emergency, then all of a sudden the General magically becomes "technically
qualified" to use these channels too. SNOBBISH.

> Be lazy, get less. Pretty simple, huh?

Then why is it you get to have a driver's license and didn't have to learn Russian
or French first? You LAZY SON OF A BITCH!!

> time. It's a HOBBY, not a job.

Right. So is fishing. So why don't you have to learn how to hunt and kill
buffalo before you can get your Extra class fishing license? Why is ONE class
of license good enough for that HOBBY?

> I've noticed a pattern in my many years as a VE: it's no coincidence
> that the only whiners are those that have "no intention" of expending
> the minuscule amount of extra effort to gain additional privileges.

Let me tell you something. I have a GROL and that has quite a bit more than the Extra did. When the code requirement is dropped next year, I will NOT be upgrading to Extra, even though I could pass that test in five minutes without studying for it. Why? Because I don't gain ANY extra privileges, so why would I waste my time?? I can use all the same bands an Extra can NOW! The only thing I can't do, is talk to snobs like you on the few special channels set aside on each of the General bands for Extra snobs.

Why would I waste my time learning code when I will never use it? Do you learn how to speak Russian for no reason at all, other than perhaps so that others will not call you lazy??

It is very interesting to note that I have no problem with you learning or using morse code, why should you care if I don't like code and have no intention of using it?

Start hitting the books so you can be tested on Russian before you ever use your HF bands again. If you refuse to do this, you are as LAZY as everyone else you accuse of being lazy.

Those LAZY fishermen! They don't pass any theory OR code and get to have
a license for their hobby!

This discussion is NOT about arguing or bashing each other. It's about sharing your personnel feelings. Your definitely entitled to yours as others are entitled to theirs.

If you care to call me a dead beat so be it. It's a childish way to expressing your opinion.

why would

Let me correct this this statement. I learned the code to get my General,
but never
ever USED the code, so now I don't know it anymore, as is the case with most
other
Hams I know. I realize I don't have to wait until next year when the code
requirement is dropped in order to get the extra as a General now does not
have to
pass any code test again to get the Extra. So, being that I could go
tomorrow and
take the Extra test and pass it without studying as they borrowed most of
their
questions from the GROL (which I have) I still don't see why I would waste
time and
gas to do this as I would get no additional bands to use. As it is, I
never use
anything below 2 meters anyway as that is not where technology is going, and
Hams
should be helping to invent and create new technology as we have done in the
past.
Right now the microwave bands are the main concern, and the bands most
threatened to
be taken away and auctioned off to phone companies and the like.

Keep pounding out morse code on shortwave radios in between washing your
clothes on a
washboard, while the rest of us evolve.

4137. Re: Aircraft Band Crystal Scanner By Bearcat???

I've never seen an AM Aircraft Band front end
board for the Bearcat III and don't think one was ever
offered for sale. The BC III mainframe employs an FM detector IC
and you would need an AM detector for aircraft.

I have had several BC IIIs and front end boards.
Electra did make multiple versions of some of the
boards to cover different "splits" (e.g., VHF-low low),
but they were for the FM land mobile bands, not aircraft.

While I agree that CW is antiquated, someday we may need it. If we
ever lose SATCOM, the only way to get messages longhaul will be via
CW.

I must admit that I was totally surprised when I learned that the US
Navy had dropped morse as a requirement for the Radioman rating. How
the hell can you call yourself a radioman if all you are doing is
using a computer?

And we need to determine the economic and ethnic diversity and be sure all classes are covered equally. No additional licenses would be issued except to under represented diversity groups.

Let's see, let's start with womyn... once they are 50 percent men may once again apply for licensees.

All hams will use the same rig and antenna so none will feel they are a lesser ham. Those that have knowledge that other don't have will be fined for revealing it, as it makes those without it feel bad...

Morse code shall be banned as it is a clear sign of effort expended for the sole purpose of making others feel bad...

DXCC and other awards will be issued with the new "no test licence" so none may claim superiorty and make other feel bad. End of politically correct horse droppings and start of real feelings!

I like big cars, big boats, big motorcycles, big houses, and big campfires. I believe the money I make belongs to me and my family, not some governmental stooge with a bad comb-over who wants to give it away to crack addicts for squirting out babies.

Guns do not make you a killer. I think killing makes you a killer. You can kill someone with a baseball bat or a car, but no one is trying to ban you from driving to the ball game.

I think that if you feel homosexuality is wrong, it is not a phobia, it is an opinion.

I don't think being a minority makes you a victim of anything except numbers.

The only things I can think of that are truly discriminatory are things like the United Negro College Fund, Jet Magazine, Black Entertainment Television, and Miss Black America. Try to have things like the United Caucasian College Fund, Cloud Magazine, White Entertainment Television, or Miss White America and see what happens. Jesse Jackson will be knocking down your door.

I have the right "NOT" to be tolerant of others because they are different, weird, or tick me off. When 70% of the people who get arrested are black, in cities where 70% of the population is black, that is not racial profiling, it is the law of statistics.

I know what sex is, and there are not varying degrees of it. If I received sex from one of my subordinates in my office, it wouldn't be a private

matter or my personal business. I would be "FIRED" immediately!

I believe that if you are selling me a milk shake, a pack of cigarettes, a newspaper or a hotel room, you must do it in English. As a matter of fact, if you want to be an American citizen you should speak English. My father and grandfather shouldn't have to die in vain so you can leave the countries you were born in to come over and disrespect ours.

I think the police should have every right to shoot your sorry ass if you threaten them after they tell you to stop. If you can't understand the word "freeze" or "stop" in English, see the above lines.

I feel much safer letting a machine with no political affiliation recount votes when needed. I know what the definition of lying is.

I don't think just because you were not born in this country, you are qualified for any special loan programs, government sponsored bank loans or tax breaks etc., so you can open a hotel, convenience store, trinket shop, or any other business.

We did not go to the aid of certain foreign countries and risk our lives in wars to defend their freedoms so that decades later they could come over here and tell us our constitution is a living document and open to their interpretations.

I don't hate the rich. I don't pity the poor. I know wrestling is fake, but so are movies and television, and that doesn't stop you from watching them. I believe a self-righteous liberal or conservative with a cause is more dangerous than a Hell's Angel with an attitude.

I think Bill Gates has every right to keep every penny he made and continue to make more. If it ticks you off, go and invent the next operating system that's better and put your name on the building. Ask your buddy that invented the Internet to help you.

It doesn't take a whole village to raise a child right, but it does take a parent to stand up to the kid and smack his little ass when necessary and say "NO"

I think tattoos and piercing are fine if you want them, but please don't pretend they are a political statement. And stay home until that new lip ring heals, I don't want to look at your ugly infected mouth as you serve me fries.

I am sick of "Political Correctness" and of all the suck ups that go along with it.

I do not think any of us owe reparation to any one. I know a lot of black people, and not a single one of them was ever a slave, and I do not know any one who has ever owned a slave. We need to get over it already!!!

Why must it be, "African Americans", "Mexican Americans", "Asian Americans", etc. I don't go around saying I am European American just because my great great great great great Grandfather came here from Europe.

I am proud to be from America and no where else!!! And if you don't like my point of view, tough!!! That is your right because this is America!!!

> All hams will use the same rig and antenna so none will feel they are a
> lesser ham. Those that have knowledge that other don't have will be fined
> for revealing it, as it makes those without it feel bad...

This is silly. If there was a requirement to learn and be tested on how to hunt buffalo before getting a fishing license, or another class of fishing license that required more testing without giving any additional lakes to fish in, anyone pointing out how stupid that would be would be replied to by you in this manner:

"All fishermen should use the same poles and reels or they will feel like they are a lesser fisherman."

?!?!?!

> Morse code shall be banned as it is a clear sign of effort expended for the
> sole purpose of making others feel bad...

Not banned, just not a requirement. The problem is that you have no idea or concept of the difference between the two. No one wants morse code banned.

It would make no sense to REQUIRE someone to learn and be tested on using the Russian language before they would be allowed to get a fishing license in the United States, right? (perhaps you will argue this too, but then we all will know you are just a troll if you do.) Those that realize this would be stupid, would be opposed by idiots that claim they are lazy and trying to ban the Russian language because they don't think they should have to learn Russian to get a fishing license in the USA. There would be no ban, people could still choose to learn and speak Russian in the USA while fishing if they so chose to, but there is no need to force ALL people who fish in the USA to know and use the Russian language.

Anyone will always be free to learn and use morse code on ham radio, but why force everyone to learn morse code that only want to use a microphone to talk on HF?

Make no sense. You can continue to TRY and make an argument, but no argument you make will ever make any sense in this argument, ever.

> DXCC and other awards will be issued with the new "no test licence" so none
> may claim superiorty and make other feel bad.

ARRL awards and the like are worthless. Anyone can make up an award certificate and award it. Why I could make an award for most states and countries contacted without using morse code, big deal. Contests and the like only jam up the frequencies without any real purpose other than those that find

it really important to post all these worthless pieces of paper on their walls to feel really important. If you want to talk to lots of people in different states and countries, go ahead and do it. But don't do it just because you want to get one of these silly pieces of paper, do it because you like to do this. Seems everything in Ham radio is only to get into a better class, or to win more awards, not to just have a good time or to invent new technologies relating to radio. But then, there is no ARRL awards to invent new radio technology, so why would anyone bother to do that when they don't get any piece of paper for it?

> I like big cars, big boats, big motorcycles, big houses, and big campfires.
> I believe the money I make belongs to me and my family, not some
> governmental stooge with a bad comb-over who wants to give it away to crack

Now you are making some sense. There is nothing wrong with this statement.

> Guns do not make you a killer. I think killing makes you a killer. You can
> kill someone with a baseball bat or a car, but no one is trying to ban you
> from driving to the ball game.

Again, nothing wrong here. Even the sniper was not considered a murderer when he killed people in the Gulf war for Clinton and Bush, then he is a hero. He is only a murderer when he kills people in the USA for people in the middle east.

Of course if you were living in the middle east, he would have been a murderer before, and a hero now. The difference between murder and killing depends on which county you live in or what the local laws are.

A police officer can use a gun to kill and never be called a murderer. The word murder is ridiculous, lets just call killing "killing" as it applies to everyone equally.

> I think that if you feel homosexuality is wrong, it is not a phobia, it is
> an opinion.

Right. Someone who HATES homosexuals can NOT be a homophobe! Homophobe means you are AFRAID of homosexuals. Likewise a person who abuses children can NOT be a pedophile! Pedophile means to LOVE children.

> I don't think being a minority makes you a victim of anything except
> numbers.

Being a minority means you are a victim of democracy. Everyone else will always be outvoting you and telling you how to live your life.

> The only things I can think of that are truly discriminatory are things
> like the United Negro College Fund, Jet Magazine, Black Entertainment
> Television, and Miss Black America. Try to have things like the United

This is very very true.

> I have the right "NOT" to be tolerant of others because they are different,
> weird, or tick me off. When 70% of the people who get arrested are black, in

Right again. If you are swimming in the ocean and see a shark coming towards you, you will get the hell out of the water and judge it on the STEREOTYPE given to sharks, not be politically correct and hang around to judge him as an individual that may not kill you just because he is a shark. Stereotypes are statistical facts, not something pulled out of a hat at random.

> I know what sex is, and there are not varying degrees of it. If I received
> sex from one of my subordinates in my office, it wouldn't be a private
> matter or my personal business. I would be "FIRED" immediately!

If both of you consented to the sex, this is wrong.

> I believe that if you are selling me a milk shake, a pack of cigarettes, a
> newspaper or a hotel room, you must do it in English. As a matter of fact,
> if you want to be an American citizen you should speak English. My father
> and grandfather shouldn't have to die in vain so you can leave the countries
> you were born in to come over and disrespect ours.

Very true. Again, instead of uniting everyone to the same language, customs, and pride in our one country, we have separate groups of people with their own languages, customs and pride in their own nationalities instead of the county they live in, which is pulling this country down and destroying it. English is what our constitution is written in, our money is printed with, our street signs are made with, and what the pledge and national anthem are in.

> I think the police should have every right to shoot your sorry ass if you
> threaten them after they tell you to stop. If you can't understand the word
> "freeze" or "stop" in English, see the above lines.

True to a point. But when a cop is harassing you over a victimless crime, such as not wearing a seat belt, or being in possession of plant leaves that hurts no one else, then things are different. If you did nothing wrong to anyone else and a cop points a gun at you because you exercise your constitutional right to not only own but to bear arms, then that cop has no right to point his gun at you and you have a right to defend yourself.

> I feel much safer letting a machine with no political affiliation recount
> votes when needed. I know what the definition of lying is.

Voting is a waste of time. The majority of people voted for Gore last election, and the government decided to put Bush into office. Not only does your one vote not count, nobody's vote counted. People make fun of Iraq's election where Saddam was the only one on the ballot. I seem to remember many offices on my US ballot with Judges and such where there was only ONE person on the ballot too! At least in Iraq they had the choice to vote NO for saddam, there was no NO choice for me to punch on the US ballot. At least Saddam got 100% of the vote, Bush didn't even get a majority and was put into power. Which system is more screwed up?

> I don't think just because you were not born in this country, you are
> qualified for any special loan programs, government sponsored bank loans or
> tax breaks etc., so you can open a hotel, convenience store, trinket shop,
> or any other business.

This is exactly right. You want to know something interesting? All these points you make are exactly what Hitler realized and wrote in Mein Kampf. You might want to read that good book, that is if you can still find a copy in this country. Note also how many of the German people loved him and shouted in praise at what he would say and do for them. (Want to know what he said to them? A book of his speeches on Amazon.com or any local book store will cost you $600 to find out! This is the american way of censorship.) Bush and Clinton never get screams of hails and praise after any of their speeches. Our government likes to make Hitler and everyone else out to be evil and we get taught all these bad things about people, but if you do some research, you find out quite the opposite. Don't read any of the books on Hitler you find on the shelves in the bookstore, but DO note that they all are by Jewish authors that seem to write the books with some bias for some reason. The covers of the books calling Hitler a "diabolical madman" forewarns that you are not going to get any unbiased information here! Mein Kampf was written by Hitler himself, so this is really the only way you can find out the truth about how he thought and felt about things. There are three other books that he wrote, but for some reason they are not in print in this country. Seems our government doesn't want us reading any of those books anymore. I found one in a used book store, and I can see WHY they don't want us reading it! Seriously though, your statements here are in exact agreement with what Hitler said and did. This is not meant as an insult, quite the opposite. You really should read Mein Kampf, you would be surprised at how much it says exactly what you do.

> We did not go to the aid of certain foreign countries and risk our lives in
> wars to defend their freedoms so that decades later they could come over
> here and tell us our constitution is a living document and open to their
> interpretations.

Correct.

> I don't hate the rich. I don't pity the poor. I know wrestling is fake,
> but so are movies and television, and that doesn't stop you from watching
> them. I believe a self-righteous liberal or conservative with a cause is

Sounds fair.

> It doesn't take a whole village to raise a child right, but it does take a
> parent to stand up to the kid and smack his little ass when necessary and
> say "NO"

Man I am standing up and applauding now!

> I am sick of "Political Correctness" and of all the suck ups that go along
> with it.

Correctness is always better than "political correctness" which is a
contradictory term.

> I do not think any of us owe reparation to any one. I know a lot of black
> people, and not a single one of them was ever a slave, and I do not know
> any one who has ever owned a slave. We need to get over it already!!!

This is true. As much as the United States was founded by slave owners who used
ethnic cleansing to rid the land of native americans, you and I should not be
punished for their actions. We are being punished by never being given the
chance to have jobs like chief of police, judge, or anything in which a quota
says sorry, you don't have the right skin color, this job has to be given to a
black person. What did we do to get treated like this? Why is it not
illegal, but rather LEGAL discrimination?! Two wrongs don't make it right.
Just because the people who were guilty of discrimination before are dead and
can't be punished, stop going after someone else to take revenge for something
you never suffered. I wish I was black, then I could get a high paying job
without any fear of getting fired, as I would have Jesse Jackson to protect
me. Why doesn't that racist ever come to the defense of white people, only
blacks? Never once has he stood up for someone white, every single case has
been against blacks. If someone white did what he does to protect whites, then
this person would be called a racist and have death threats made against him and
possible arrested for "hate crimes."

> Why must it be, "African Americans", "Mexican Americans", "Asian
> Americans", etc. I don't go around saying I am European American just
> because my great great great great great Grandfather came here from Europe.

Right. You can only be a citizen of ONE country. PICK ONE! It is even MORE
insulting to put the other country BEFORE American, instead of say, "American
African" (like putting the US flag above the African one on a pole for respect,
the other way would be insulting and illegal) Also, did you ever call a
Jamaican an "African American"? They don't take to kindly to that stupid
phrase either! What do you call blacks that live in Germany or France?
"African Americans"? That would make no sense! Call them BLACKS or
NEGROS. It is the only thing that fits in all situations and does not insult
our country.

For Sale:

About 2 dozen, maybe more - scanner crystals. MOST are in a sealed package, some are "loose". Most of them are UHF. Some are VHF Low and High. Some are labeled as to a scanner type, i.e; BC or Regency. Others are not. The ones in the packages have no label that "I" can detect as to brand of scanner or IF they can be used with, only the manufacturer and/or distributor of the crystal. Feel free to ask for your frequency. $3 each plus shipping. These are being sold as part of a massive clearance sale and NON - RETURNABLE.

****

Here is what is says on each crystal.
1. P-10 TD
2. BOMAR L-6

Does anyone know if the IF is 10.7 or 10.8
Thanks guys I'm at a loss here.

So I'm cleaning out the basement today, and I found this OLD shortwave receiver. I think my dad must have brought it home from his folks house a while back.

It's a National model SW-54. Looks like it's in good shape. I plugged it in and it powered up, but I see no antenna. Hmmm. I will have to take a closer look at it!

Be VERY careful about plugging in old equipment, as there can be a very real shock hazard present. Those old wax capacitors, etc...change value with age or short out completely.

The playback speed has to equal the record if you don't want it to sound
like a bunch of chipmunks on speed.

So yes, you would have to use the original cassette recorder.

--
----------------(from OED Mini-Dictionary)----------------
PUNCTUATION - Apostrophe
Incorrect uses: (i) the apostrophe must not be used with a plural
where there is no possessive sense, as in ~tea's are served here~;
(ii) there is no such word as ~her's, our's, their's, your's~.

Confusions: it's = it is or it has (not 'belonging to it'); correct
uses are ~it's here~ (= it is here); ~it's gone~ (= it has gone);
but ~the dog wagged its tail~ (no apostrophe).
----------------(For the Apostrophe challenged)----------------
From a fully deputized officer of the Apostrophe Police!

I need the following frequencies for my Electra Bearcat III scanner...

155.415
153.980
157.450
155.340
155.055
39.500
159.210
453.250

Let me know if you have more than 1 of the above frequencies as I am putting together another Bearcat III for a friend of mine.

Now I have 4 crystals I do not need. If you guys want to work out a deal on them, that is fine with me. Like trading 1 for 1 or something. I need to keep this cheap. The frequencies for the 4 I don't need are...

47.69666
48.150
460.100
460.300
I should be getting more crystals from scanners I won I eBay and I will post them here in this thread.

Thanks,
BTJustice

4155. Re: Aircraft Band Crystal Scanner By Bearcat???

Newsgroup: rec.radio.scanner

Bearcat III front end boards:

3L = 30 - 50 MHz board
3H = 150 - 174 MHz board
3U = 450 - 470 MHz board

The model number (3L, 3H, 3U) and frequencies
are printed on a small, paper label which is glued
to the edge of the board. These boards are so old
that I've seen many boards where the label fell off.

Bob,

Might you have some Bearcat crystals you want to trade or sell? I need...

155.415
153.980
157.450
155.340
155.055
39.500
159.210
453.250

If you have more than one, please let me know as I am putting another Bearcat III together for a friend as a gift after he graduates from the police academy he is currently attending. I also want to put together another one for my mother.

I know I can buy them at several places online including Radio Shack, but I want to keep things as cheap as possible since I am just now starting to get into scanner collecting after reading a few of your scanner collecting articles.

I have a few scanners coming in probably tomorrow which will undoubtedly have crystals I have no use for. I'll let you know what they are.

Thanks,
BTJustice

1. Code IS a digital mode
2. Code is the only digital mode that does not require extra equipment
(i.e. a computer) in the setup.
3. There have been and always will be occasions when other digital modes
fail yet CW will hold up.

The music is a bit cheesy.
But, it's more interesting to hear the delay. I live in oakland county as
well, and turned on my scanner, and had the internet connection going as
well. There seemed to be a minute or so delay.

Just wanted to see how much of a delay there was going to be.

Later,
Joe

> [various comments]

I have watched this debate and comparison to other hobbies and none of the comparisons are really valid. Take the fishing one. Nobody is trying to take fishing privileges away from the people. By contrast ever since the beginning of radio, government and commercial interests have been trying to eliminate amateur radio. If you don't believe it, simply dig into the newspaper archives, the ARRL archives, and read the book "200 Meters and Down". We have to have something to offer and make it worthwhile to prevent the loss of these radio privileges.

One could take the time and show the lack of validity of the other comparisons too but I don't care to spend all night typing so one example should suffice.

Radio amateurs have successfully defended their existence by having something to offer. That is a trained pool of radio operators and individual experimentation and learning. To maintain this, standards are necessary. Life is all about standards. In many fields, one must meet standards to reap the benefits. This is true both in career pursuits (high school diplomas, college degrees, etc) and in hobby pursuits (amateur radio license, private pilot's license, hunter's courses).

You show your lack of experience here. It is not uncommon for the shortwave bands to be in poor enough shape that voice communications are not understandable. Under those conditions only digital gets through and of the digital, CW gets through the best.

I have a question.. my local first aid and fire companies use pagers
to notify them of calls. The pagers can be set so that the volunteers
hear nothing until there's a call (page). Does anyone know if they
transmit CTCSS tones to activate the pagers? The reason I am asking it
because I'd like to set my VX-5R to use the "Bell Operation", so that
when the CTCSS tone for my squad is set off, my radio beeps. How would
I find out what CTCSS tone is used, if this is indeed the method of
activating the pagers.

More likely to be DTMF tones that actuate the pagers. Lots of reasonably priced 2m HTs that have DTMF decode, so I'm sure your VX-5R can do this. Very likely the radio also has a CTCSS tone, but that would be for comm use, hard to say if the pagers have CTCSS decode also.

Most fire departments use a two-tone sequential sequence to activate their pagers.

There are several formats, so you would have to make sure that you not only get the two alert-tone frequencies right, but the timing of each and the inter-tone spacing as well.

CTCSS (PL) tones are generally not used during the paging sequence to prevent the sum and difference mixing products which distort the tone waveform. Most base stations use a function tone to disable the PL during the paging sequence, then reinstate it when it is finished, for the voice message. Motorola pagers do well with the PL on, but not all can brands handle it.

I have never heard of activating a fire department with a PL tone or a DTMF sequence.

The departments in our area carry Motorola Minitor pagers, and use a two-tone sequential sequence for alerting.

You should be able to confirm which alerting method is used by monitoring the fire frequency during a call out or a scheduled pager test.

I took a look at the specifications for the VX-5R and did not see the ability to decode two-tone sequential paging formats.

>> More likely to be DTMF tones that actuate the pagers. ... Very likely the radio also has a CTCSS tone, but that would be for comm use, hard to say if the pagers have CTCSS decode also.

Andy,

Think of CTCSS as a system-wide tone, allowing all the radios of an agency to hear each other, without hearing another agency on the same frequency.

DTMF enables a dispatcher or user to call specific radios WITHIN the agency, such as the members of one fire dept within a county agency, rather than every county member.

DTMF and other signaling formats can also be setup to page shift members separately, or to page volunteers separately from paid staff, or to control the doors and lights at the station.

If you don't have CTCSS, a program called Wintone (search on Google) might be useful. Wintone can also handle DTMF.

I got MY General ticket in 1969 and upgraded to Extra in 1971.

If you're not a code enthusiast, there is very little to be gained by
getting the Extra. Most of the Extra privileges are in the lower
portions of the CW sub bands.

But for those you ARE code enthusiasts, those frequencies are very
valuable because that's where most of the DX is.

Upgrading is not about ego. It's about earning privileges.

It's known as incentive licensing. Even back before WWII there were
different classes of ham licences. If you read the FCC regulations as
to WHY amateur radio exists, one if the key reasons is to provide a
pool of technically capable people to serve the national interest.
Many electronic engineers started out as ham operators.

> This PROVES that it is only to divide Hams into different classes and groups
> so that some can feel more superior than others in the hobby.

Please elaborate on this. Are you saying that incentive licensing is
some sinister plot by the FCC to breed discontent among hams?

> I can understand
> why someone who wants to talk on shortwave would upgrade from Tech to General,
> but I can't for the life of me understand why someone would "upgrade" from
> General to Extra unless just to show off and feel better than a General class
> ham.

One reason to upgrade is to have access to the choice DX frequencies.
And with today's exams, what is so hard about passing a multiple
choice test where the exact questions and answers are published for
all to see? You might even learn something in the process. But I guess
folks today don't want to exert any effort at all.

I suppose you would like a no-code, no-theory license where you would
be issued a licence just for filling out a form with your name and
address. After all, you don't build your own radio. Why should you
have to learn all this boring technical stuff?

Call me crazy. I got my Extra , complete with 20wpm test, not for extra priviledges but just because it was a challenge and it was there. I was Novice/Tech/Class B at age 14, Class A at 15 but waited 'till age 51 for the Extra.

Wow this is a real good argument to the statement that was made. I guess this means you admit it is a fact since you try to change the subject rather than try to prove the statement false.

> If you read the FCC regulations as
> to WHY amateur radio exists,

Now if only you could research the early regulations as to why the morse code requirement existed! Here is a hint: It was NOT to make the license harder to get, it actually had a purpose. Hint #2: The reason for the requirement is no longer valid due to something the military did.

> > This PROVES that it is only to divide Hams into different classes and groups
> > so that some can feel more superior than others in the hobby.
>
> Please elaborate on this. Are you saying that incentive licensing is
> some sinister plot by the FCC to breed discontent among hams?

They just never cleaned up the the old laws and requirements that no longer apply. For instance, the fact that someone had to take a Novice test and learn about shortwave bands they are not even allowed to use as a Tech so that they could get their Technician's class license was idiotic. They finally realized this mistake, and eliminated the Novice class altogether as it made no sense to be tested on HF in order to get a license for VHF and above. Next year the mistake to have someone tested on code before they can use a microphone on HF will be cleared up as well. The government just always takes a long time to catch up to common sense, and they are always way behind.

Was it a sinister plot by the government to not allow blacks and women to vote to breed discontent among it's citizens? Or did it just take them a long time to figure out how stupid their rules were? If not for people like me to point out these stupid rules and laws, they would never get fixed. You sheep would just do as you are told and never speak up about anything that was wrong.

> > I can understand
> > why someone who wants to talk on shortwave would upgrade from Tech to General,

>
> One reason to upgrade is to have access to the choice DX frequencies.

They are only choice because no one else is allowed to use them. Think about it, you could make ALL HF frequencies off limits to Generals as well and then really improve them for DX use! The FACT is, when no one is using the bands, they get taken away and given to someone who WILL use them. Ham radio has shown that it really doesn't want those frequencies that it does not allow MOST of it's operators to use, even though they have been tested and shown to be qualified to use them as Generals that use those same bands that those frequencies are on. Wake up! Or soon YOU will be bitching and moaning why you can't use those frequencies either because they were taken away from Ham radio! Then it will be TOO LATE for you to come around to common sense.

> And with today's exams, what is so hard about passing a multiple
> choice test where the exact questions and answers are published for
> all to see? You might even learn something in the process. But I guess
> folks today don't want to exert any effort at all.

All the questions on the Extra were taken from the GROL exam that I took and passed. There is nothing that I am going to learn from taking the easier Extra test. It is not a point of it being any extra effort to get the Extra class license from General, it is the question of WHY would I get it when I get use of all the same bands NOW as a General?! Of course if you READ posts before you replied to them, you would have read this explanation the FIRST time.

Interesting too how no one is able to debate any of the facts being made, only snipping them out and attempts made to twist the direction of the argument to something unrelated or back to the old argument that was just disproved by the statement and post being replied to.

> I suppose you would like a no-code, no-theory license where you would
> be issued a licence just for filling out a form with your name and
> address.

You know what is ironic about that? The fact that getting a license for not amateur, but PROFESSIONAL COMMERCIAL radio stations using upto 50,000 watts or more WAS just a matter of filling out a form and getting your restricted permit! At first it was a Third class license in which you needed to be tested, then they reduced it to the form you fill out and sign certifying that you know what you are supposed to know and did not need to be tested. NOW you don't even need to fill out a form at all! Yet for an AMATEUR hobby license, for which some never use more than a 500 mW HT, they have to be tested and pass an exam. This somehow must make sense to people like yourself, but it sure doesn't seem to utilize any form of logic that I have heard of other than "fucked-up logic".

I'm not saying they should have eliminated the broadcast operator's license, or that they should eliminate testing for amateur licenses. BOTH have operators that are authorized to operate transmitters with a lot of power that could do some serious damage if they don't know something about it first! The POINT was (which you people never seem to grasp and you need to be tested on comprehension before you are allowed to reply on a newsgroup) that you don't need to be tested on things that

have nothing to do with what license and bands you want to access. You DON'T need to be tested on morse code if you want to use a microphone to talk, you don't need to be tested on additional theory and knowledge to be an Extra when as a General you were considered tested enough to operate the same power on the same bands!

This is like saying there is an EXTRA CLASS driver's license available. You get tested on ADDITIONAL traffic rules and theory for this license, but don't get to access any additional roads or travel at any higher speeds with this license, people just get them so that they can look down at people with the regular licenses and call them lazy! If the regular license was enough to allow someone to get behind the wheel and drive on the same roads as the Extra, what is the point in getting the Extra class license?

> After all, you don't build your own radio. Why should you
> have to learn all this boring technical stuff?

The technical stuff IS needed, you really don't get that do you? No matter what bands you use, you will ALWAYS be using a radio, so you should know about radios! You do not need to use morse code to operate a radio and use it with a microphone, so you don't need to know morse code to be a radio operator.

SIMPLE!

Here, let me set up some more examples for you and see if you can figure them out...

1) Does a ham radio operator need to know about antennas and be tested on this?
a) No, because sometimes you can use a radio without an antenna.
b) Yes, because ALL hams will be using antennas for all modes and bands.

2) Does a ham radio operator need to know about radio controlled airplanes and be tested on them?
a) Yes, because ALL hams will be using radio controlled airplanes, and they can be used in an emergency when the bands are noisy to send a note via radio controlled airmail.
b) No, because many hams will not ever buy or own a radio controlled airplane because one is not needed to operate a radio or participate in the hobby.

3) Should people be required to pass a test showing they know how to read and comprehend a post on a newsgroup before replying to it?
a) No, because everyone likes when people just post arguments that have nothing to do with the statements made and ask the same idiotic questions requiring the original poster to keep repeating the statements over and over again because the idiot did not read or comprehend them.
b) Yes, because those people who don't want to take and pass this test and just think anyone should be allowed to use a newsgroup without passing a test first are lazy people that never want to put any effort into anything. They feel that they should just be allowed to use the internet for free and no one should ever have to take any tests or get any licenses first.
c) Since no public safety bands are interfered with by idiots posting on newsgroups, and no one is in danger of any physical harm by them posting, no test is required, but it sure would be nice if everyone put in at least SOME effort to read and comprehend a post before hitting the reply button and starting an argument!

Don't peek! Answers are below.....

1) B
2) B
3) C

If you didn't get a 100% on this test, you should not be allowed to play with transmitters capable of hundreds of watts of power. Giving a transmitter to someone that can't pass this test, is like giving a loaded gun to someone who doesn't know what the hell it is.

Any replies to this that make statements without first reading and comprehending what was said here, will not be replied to by myself any further.

Apparently this is the same reason everyone else did too as there AREN'T any
extra privileges!

Now, what is stopping you from learning and being tested on a 50wpm test, as
well as some additional theory that was not included on the Extra, and in
return, you will get an EXTRA EXTRA CLASS license that will allow you to use the
same bands you are now using? Why are you stopping at the Extra class?
LAZY?
Why are you not learning and mastering the Russian language in your spare
time? And brain surgery? Don't give any lame excuses about not needing to
learn them because you have no intentions of using them, that is just the LAZY
man's way out! What if one day you are stranded in Russia and your loved one
falls down and needs brain surgery and there are no other brain surgeons around
for hundreds of miles?

Once upon a time, I was given a CW test by the Navy...I got 1 of 50
correct. They ended up sending me to Russian language school.

The guys I worked with later were copying CW at 30-40WPM. I was glad
I had been sent to language school...much easier!

Art, I studied code until I was blue in the face but couldn't get above that 18 word per min. level.

I am happy to pat any one on the back for doing so.

But ham radio isn't all about passing a code test or even using it on the air as the majority of us will attest too.

The people here that have taken some of the posts on this thread to heart seem to be extra class hams. It's not about being nasty, it's just a discussion and we all have our opinions.

Well i'm going back to the major subject of this newsgroup - scanners.

Have a positive day and "God Bless America" for the right to exercise my opinion openly.

Dan, take all this for what it's worth(not much) just look at the spelling, grammar, etc. in most of the replies!
Most of the replies are negative and in your direction, but I can assure you if the shoe was on the other foot these same people would probably have a stroke over it, esp. someone stupid enough to use an acronym of profanity(F Q T) for their nickname on this board instead of having the courage to be known. Also I have a hard time beleiving someone is "drawn" away to a place so "secure" they have no access to e-mail for over a week, even the pres. dosen't live this secluded, makes you wonder doesn't it?
Oh well hope this transaction turns out okay for all concerned.

The statement regarding the police not needing code, because the FM mode that they use, is kind of off topic. Anyway, I remember an incident in the early 70s, where a Hillside Illinois police officer routinely pulled over a motorist. He ended up getting abducted by the motorist, and later killed. He tried to call for help on the local frequency (155.49MHz), and was covered up by other traffic sharing that frequency. It was because of the capture effect that FM exhibits that he wasn't heard. Also, there were around 20 local towns on that frequency. After that incident, many of the towns switched to 155.64MHz, to alleviate that problem. Too late for this poor fellow, but hopefully, it helped prevent future incidents. The digital modes used in the land mobile service help out, but if a signal gets too weak, the BER (Bit Error Rate) suffers.
As far as the code.....maybe it shouldn't be pushed down peoples' throats, but it can be a handy mode, and in a life or death situation, it could be the only thing that could help. The sound of an SOS is unmistakable, and with the direction finding equipment currently available, chances of locating you are pretty good. The current equipment will provide a bearing on the signal as soon as a transmission is detected. If two SAR units are involved, simple triangulation would provide an accurate location of the transmitter. This is, of course, negleting the effects of ionospheric phase shift.

Geez, you sound worse than my sister-in-laws 3 year old! I never use am,
sstv, amtor, pactor, rtty, etc. and I had to be tested on them, many of them
are nearly as antiquated as cw. Why does the FCC test us concerning them??
Because they want us to know something about the modes we can use, the only
difference between cw and the others is that proficiency is shown by
receiving and writing it down rather than just basic memorization. Your
lack of real logic is appalling and you've deceived yourself because of your
obvious hatred of cw and anyone who has more than you.

You hit the nail right on the head. Two of my kids passed their Tech Plus license when they were nine years old. My daughter got 100 percent on the written test, my son got one question wrong. But there were adults at the session who failed miserably. Why? I suspect they just picked up a "study guide" at Radio Shack and skimmed through it for an hour or so before taking the test.

It's amazing. People now have access to the exact questions that are going to be on the test, and they still aren't willing to spend enough time to get a passing grade. That speaks volumes about their commitment. Seems like the easier it becomes to get a license, the more some people whine!

For me the code test was the hardest test I've ever taken in my life. And it took me 3 years of study just to get to that point. Now I'm working on the General upgrade and kicking myself because I miss 2 to3 questions on the practice tests, but I keep on studying.

I read once that Larry Bird (who just lives 10 miles away from here BTW) would stand in his back yard and shoot free-throws until he had made 10 in a row without touching the rim. He WANTED to play basketball and worked to get what he wanted.

That is the reason that so many people fail on the tests it's not anything more than how much they WANT to be a ham and are willing to work to get what they want! The whiners and those who fail do so because if they can get it for nothing (work or money expense) they'll take it but if it costs something (time or trouble) they don't care anymore!

Find out the frequency and start listening. The vx-5 can scan for CTCSS
tones (kinda slowly, but it's there). And just listening to the proper
freq without the tones enabled should tell you if they use DTMF, but I
suppose you'd have to catch the very beginning of a transmission.

Hope this helped.
Ben

I'm not changing the subject at all. The question asked why the requirements for the Extra are tougher than the General. The answer is that the FCC uses the license structure as a means to encourage hams to increase their knowledge. This is consistent with the "Basis and Purpose" of amateur radio as defined in the first section of Part 97 of the rules. Extra operating privileges are used as an incentive to learn more. The incentive in this case is access to a wider range of frequencies within the band. You might not like it, but that's the answer to the question.

> > > This PROVES that it is only to divide Hams into different classes and
groups

longer apply.

WHAT? There was a MAJOR RESTRUCTURING of amateur radio in 2000. Basically, there was a complete rewrite of Part 97. They cleaned up everything that needed to be cleaned.

Now there are only three license classes available. The statement I disagree with is that the license structure exists "only to divide Hams into different classes and groups so that some can feel more superior than others in the hobby." The purpose of the different classes is to provide rewards for those who earn them.

> Was it a sinister plot by the government to not allow blacks and women to
vote to
> breed discontent among it's citizens?

This is a ridiculous comparison! Stay on the topic.

> > One reason to upgrade is to have access to the choice DX frequencies.
>
> They are only choice because no one else is allowed to use them.

You can use them. All you have to do is pass the test. But you say below, you don't care enough about those frequencies to take the test.

> It is not a point of it being any extra effort to get the Extra class
> license from General, it is the question of WHY would I get it when I get use of all

You coulda just posted his name and not ALL his info. People probably would not of jumped on you. But as usual, you were a baby and was hoping someone would snipe him or take him our or whatever. I would never post my real name for you. I ain't that nuts. You would most likely sell my name. Post it as a bad buyer alert or even use it for your porn sites. I ain't falling your your level. You do know that it is illegal to slander and post other personal info without written concent.

I wasn't arguing with you. I just thought it was stupid to call someone a lier and a rip off. Especially when the post of the alert was less then a 8 day transaction. Hell Some radio equipment I sent to the states somehow took longer then 2 weeks. I gave the guy some money back. I did pay for the parcel to go airmail too. All I am saying is that it was rude to put this non paying alert when there wasn't even a grace period of waiting. After 2 weeks I would of complained.

I am in search of a service manual / schematic for a Plectron Model 720. I have recently acquired this reciever. First and foremost I need to figure out how to tune the tone boards, and then I am thinking of a mod to another band. Any help would be greatly appreciated.

I received 3 more scanners today and pulled the crystals out of them. I now have this list of Bearcat crystals I want to trade for the frequencies listed in the other post below...

33.940
33.940
39.780
39.820
45.220
46.380
153.890 (47.69666)
154.250 (47.81667)
154.740
154.755
154.860
155.010
155.100 (48.10000)
155.250 (48.15000)
155.250
155.580
159.090
162.475
453.500
460.025
460.100
460.150 (49.92778)
460.300
460.375 (49.95278)

BTJustice
"Buford T. Justice" <BTJustice@gmx.net.no.spam> wrote in message
news:u6Zt9.181$EOT8.24969293@news2.randori.com...
I need the following frequencies for my Electra Bearcat III scanner...

155.415
153.980
157.450
155.340
155.055
39.500
159.210
453.250

Let me know if you have more than 1 of the above frequencies as I am putting together another Bearcat III for a friend of mine.

Now I have 4 crystals I do not need. If you guys want to work out a deal on them, that is fine with me. Like trading 1 for 1 or something. I need to keep this cheap. The frequencies for the 4 I don't need are...

47.69666
48.150
460.100
460.300
I should be getting more crystals from scanners I won I eBay and I will post them here in this thread.

Thanks,
BTJustice

Hi,
I would like to hear my vtech 900mhz cordless phone but I do not know if I
am picking up the digital signal or hash. I have a pro 2005 with a optoscan
board. Please let me know how you are able to hear a digital signal using a
wideband scanner. I read that if you record the sound into a sound card and
play it back as a pcm file it will work but I still get the same hiss sound.

Andy, the tones most likely are two different pitched tones. They are
not CTCSS, most commonly they are referred to as 2 tone paging, or
QuickCall (a motorola reference.) There is not as of yet (at least as
far as I've been able to research) an amateur radio that decodes these
with an alert. Icom makes an inexpensive UHF HT, IC-F21 that decodes
these, and the make a VHF version too. I use the IC-F21 as my fire
radio, and it has no problem coming down into the ham band. (fire is on
460mhz)
Anywho.... cant do what you'd like to, good luck

|Why I could make an award for most states and
|countries contacted without using morse code, big deal.

Uh, I don't know how to break this to you Tikie but these are called "Phone" awards. Got one of 'em here on the wall right next to the "CW" award. They've got them for RTTY too but I never tried for one of those, even though I had to answer questions about it on my Extra class exam. That would be the one with 20 wpm solid-copy code, taken before an FCC examiner; no memorizing the question pool or paying off the VE allowed.

Take it back. Radio shack has a 30 day return 'satisfaction gaurantee'.
Just tell them you want to bring it back and buy the one on sale. RS will be
happy to do so. Its their policy.

Yep, those were the days Wes, a 'real' FCC examiner staring one down.
They were damn intimidating too. Back when you had to draw out schematics
also... what fun it was.

Actually, what they'll do is take your current one as a 'didnt want'
turn in, then turn around and sell you the new one. This allows the
sales dude to get his full commission. Thats what they did when I
returned an item. Even tho the item I returned was defective

We had that once, just purchase the radio and along with it came
the application, fill it out, send it in and you got a license
with a callsigh, you know...the Citizen's Band. And you see what a
sewer pit of radio communications it is now.

I'm a [head] VE/CE... We do both Amateur and Commercial exams. One session, myself and 2 other guys, both Amateur Extras and holding Commercial FCC Licenses were conducting exam with about 16 applicants. A lady came in to test for her Tech. She said "I've been in radio for 25 years, I bet I know more than all 3 of you put together." My reply, "Well, you should do real well - my licenses are in my wallet, so I am not the one who has to prove anything". She BOMBED the NOVICE written, NOT ONCE, THREE TIMES. Being embarrassed (I suppose), she requested taking it the extra two times to "try" to pass. So much for knowing it all! WE got accused of causing her to fail. WHY? Because WE asked for the ID as the FCC requires. It got her all shook up. Boo Hoo!

We've tested literally hundreds. You can tell who studied and who didn't. I did have one young boy fail once after having done so well on computer at home - according to his parents. I asked him what happened? He "got scared". I told him to relax and forget we were there. Place himself at his computer. In his second attempt, he passed with flying colors. He was about 10. So, YOU CAN PASS "IF" YOU STUDY.....

This truly is the dumbing down of America.... When I tested, I didn't have a book with ALL the "possible questions and answers". Nor were there computers let alone programs to help prepare. YOU HAD TO KNOW IT. If you didn't know theory, rules, etc, you just wasted your time and trip going to an FCC Exam site.

Come on people, it isn't any harder than studying a driving manual. YOU GOT TO WANT IT! Don't you have any pride in what you can accomplish with some effort?

The cheapest way to do what you wnat is to buy an old Minitor 1 pager (EBAY) and put the correct crystal and and tone reeds in. I would guess it'll cost you $30-$50.

as all uniden made radio's. I own one here. so I DO know it works. hehe. Shut the radio off. Press 2 and the 9 and turn the power on. This will clear the memory bank. It will default the radio beep though. So whenever you press a button it will beep. Shut off the radio and press the lockout button. it shows s/s on the button itself. Press that and turn on the radio. It will say Beep off. If you press 2 and the 9, Plus other buttons while turning on. You will get test frequencies. The firmware # and other funky things. 1 and 9 I think + other buttons do more. I never had the time to do alot of different combinations bit it does work. There is one flaw in the radio. If you here this funny feedback. Post back here. Since certain people think I never help out. I DO. I give software and info to ones that want it. If I know what it is about. Visit here for the manual and info.

There aren't? What about 3.500-3.525, 3.750-3.775, 7.000-7.025,
14.000-14.025, 14.150-14.175, 21.000-21.025, 21.200-21.225. I guess
these are just figments of our imagination.

> same bands you are now using?

I'm game. And I can pass the 50 wpm test now. Will this give me
broadcast privileges on 41 meters? A MW allocation? I'll take a clear
channel, thank you. I want to play "Art Bell".
I think 730 kc would have a good ring to it...I also want to be able
to play rock -n- roll oldies on the shortwave bands. I think 7373 kc
has a good ring to it.
If this new class comes into existence, I guess I'll have to come on
here and ask donations for a new 50 kw continental transmitter that
would befit my new EXTRA, EXTRA, status. Of course, these donations
would be tax deductable. I'll also send free propellerhead caps with
blinking red LED's on the rims to all donation senders over $100.
Donations over $500 will include a 1/4 wave 2m vertical attached to
the top. These should be a hit at the hamfests, and should become a
collectors item in the future. MK

4243. tk3 v0.4 multi-platform software for ICOM IC-R3 available

Newsgroup: rec.radio.scanner
Date: 2002-10-26 11:28:29 UTC
From: "Bob Parnass, AJ9S" <usenet1@parnass.org>
Message-ID: <3dba7c1e$0$17649$272ea4a1@news.execpc.com>
Source record: 42332
Cross-posted to: rec.radio.amateur.misc,rec.radio.scanner,alt.radio.scanner,rec.radio.shortwave

tk3 version 0.4 is now ready for free download.
tk3 is an open source, multi-platform software for configuring
the ICOM IC-R3 radio/television receiver.

I wrote tk3 chiefly for radio hobbyists who use Linux, MacOS X,
BSD, Solaris, Unix, or other non-Windows operating systems.
However, tk3 runs on Windows-based systems (95 and later), too.

New features and changes in v0.4 include:

1) New controls for Confirmation Beep, Scan Pause, and Scan Resume,
Lock Function Effect, Monitor Key, Auto Power Off, Lamp
operation, Frequency Skip scan, Power Saver.
2) New duplicate frequency check.
3) Offsets of 0 MHz are blanked in the Memory Channel window.
4) CTCSS codes are hidden from view in the Memory Channel window
for channels in which the tone flag is off.
5) Added skip buttons for AM TV channels.

tk3 supports both USA and non-USA versions of the IC-R3
and lets the user choose between 10 kHz and 9 kHz AM BCB spacing.

I do not posses an IC-R3 and developed tk3 with the help
of several IC-R3 owners. Thanks to Irwin Shapiro who provided
the IC-R3 memory layout. Irwin, along with Wayne Turner and
Les Butler are active tk3 beta testers.

tk3 is undergoing active development. You can learn about and
freely download the latest beta test version of tk3 from:

http://parnass.com

I don't warrant the software, though it will cost you nothing.

What's even worse are those who feel others are given favorable treatment while they themselves are "not allowed" certain privileges. That is a loser's mentality. They can't even conceive of going out and earning what they want.

If anything, it is easier than ever to get an Extra Class license. VE sessions are numerous and conveniently located in most areas. The 20 wpm code requirement has been eliminated. New applicants no longer need to take the Advanced Class exam. And the exact questions/answers are published. None of those advantages existed when I took the test.

Bearcat did make a scanner specifically for aircraft. The speaker was round and had a drawing of a propeller on it. It's been quite a while back, and would more then likely be hard to find. I've seen one on Ebay.

4247. "Very Busy" Air Communication Freq's Around Boston: Any Suggestions?

Newsgroup: rec.radio.scanner
Date: 2002-10-26 15:06:43 UTC
From: Robert11 <rgsrose@tiac.net>
Message-ID: <apeb0i$hq2$1@slb1.atl.mindspring.net>
Source record: 42337

Hi,

Really new at this.

Am enjoying listening to air communications very much.

But, my scanning can go for quite a while before it actually picks up any air to ground, or ground to air, stuff.
As these types of communicstions are, or course, quite intermittent, it's understandable.

Was wondering if anyone knows of any specific air frequencies that have "busy" communications for "most" of the time?

I can pick up Boston Logan and Hanscom AFB (Bedford, MA) readily, as well as some apparently en-route communications from ?.
I'm about 25 miles West of Boston.

Thanks,
Bob

I'm sure there are many who don't realize that there was a time when you had to get up and leave at 5AM for a trip to the FCC field office to take the exams and that they were generally given only one day a month in a few locations and once every six months in other locations. With that much effort expended just to get there I expect most people tried to make sure they were prepared.

Personally, I think there should be a minimum time requirement between license classes. While there is no practical way to ensure that they gain any on the air experience during the waiting period, the majority of people probably would.

Source record: 42342

Hello,
I have four 5/1 watt switchable UHF Icom IC-U10
10 channel programmable handheld radios.. These are currently programmed up
on two frequencies in the 465 mhz area.

These come with battery packs and 4 Icom stand up quick chargers. Original
cost about $350 each.

One has a dicey PTT switch. This can be overcome easily with a speaker mic.

Antennas are included. These are removable and mobile
or base antennas can be used for range increase.

I am looking for a good scanner with 225-400 mhz am capability. Other trades
may be considered.

Thank you,
Phillip

Ok, a internal pack would do that.

> * maintain/improve ability to run on external supply (diode in
> the battery pack?) with batteries still inside

Yes, a series diode could accomplish that.
BUT see below

> * easy AVAILABILITY of replacement cells when they go pfft.
> Alkaline cells are still easier to come by than NICDs, and
> don't require an initial charge-up

Agreed

>
> I'm beginning to think that a 3-cell AA pack (4.5V) might be within safe
> limits for any circuitry using NICDs - anyone know if voltage in a NICD
> pack decreases with discharge, or is it suddenly just OFF?

Ni-Cad's drop off rather sharply, unlike Alkaline cells which go down
slowly.
4.5 will work, but probably not for very long!
> I don't think I will EVER purchase another unit that doesn't use
> "normal" cells. :(
> --

Now here's the "below...
A standard silicon diode(like a 1n4001, for example) has a voltage drop
of .6 volt
(this does vary, but not by much)..so putting 2 in series will
accomplish 2 things:
1.the radio won't be able to charge the batteries.
2. .6 + .6 = 1.2..so the 4 batteries will end up with the correct
voltage outpur.

4255. FS: sma-to-bnc custom fit antenna adapter

Newsgroup: rec.radio.scanner
Date: 2002-10-26 18:20:53 UTC
From: gulyas@earthlink.net

Do you have a need for a high-quality SMA-to-BNC antenna adapter that
is custom made to fit and protect your H.T. or scanner radio?

Adapter allows you to:
Quickly change antennas to base, mobile or different style use.
Use the more popular and wider selection available of BNC antennas.
Prevent chassis connector wear or from coming loose due to antenna
changes.

Adapter features:
Gold plated contacts with a teflon insulator.
A low profile design with a rubber covering for a factory antenna look.
The rubber base seals to the top of the radio with no spacers needed
for moisture and dirt protection.
The base also provides an excellent support for any length of antenna
or application.
No need to remove adapter once installed to make a quick and safe
antenna change.

Sizes to fit radio models:
Yaesu: VX-5, VX-1, FT-50-R, VX-10, VX-150, VX-110, VXA-100, VXA-120
Icom: IC-T90, IC-T8A, IC-T81A, IC-Q7A, IC-R2
Kenwood: TH-D7, TH-G71, TH-F6A, TH-F7A
Alinco: DJ-V5, DJ-X3, DJ-S40
Standard: C508A, C510A
Radio Shack: HTX-420, HTX-400, HTX-245, HTX-200
Aor: AR-16

Previewed in the May 2000 Issue of CQ Magazine, and the Nov. 2000
Issue of QST Magazine.

$11.95 + $1.50 S+H(One to unlimited)

I stopped by my local Radio Shack tonight to see about getting some crystals for my Electra Bearcat III. The salesman (who appeared to know what he was doing) called the Radio Shack Service Center. They told him that the warehouse Radio Shack had for the Bearcat 10.8 IF crystals had been closed down and all they had left was a very limited supply of 10.7 IF crystals for Realistic crystal scanners and others which use 10.7 IF crystals.

To the guy mad because he used PayPal and didn't get his equipment, sorry.
To the guy who didn't ship the equipment. I hope you got your money, shipped the equipment, and you and yours are safe and well.
To everyone else. I will get my ham ticket soon. I will learn prehistoric electronics as well as modern. I will try to learn from the old guys and pass on a tradition. Amateur radio is not just an American thing, but it very well is American in essence. Listen on the bands. Think about it for a second. If 1's and 0's are the very root of communication, I'm learning code. CW will, and always will have a place in ham radio. It all depends on if you want or feel the need to learn it. It's really not in how fast you can bang brass or use a bug, it's that you know it at all. Sub sunk? Locked in a safe? A POW denied verbal or written communication at threat of death? I would rather know it than not, and I will if only because of the satisfaction that I do. Please don't call it obsolete. It will carry through the air long after other forms of communication are buried in the ionospheric "Crash". This isn't about Morse Code though. I experience CB'ers making my TV screen look like a herring filet who's response is for Me to get a filter at rat-shack. and a few years ago recording a cassette tape to play of an LP in my car only to hear in the background from RFI "Why don't you park that truck you fat ***hole and I'll come over there and teach you a lesson". I didn't get the filter and soon the the owner of the truck stop linear left the neighborhood. But not before I had learned about sticking a straight pin through coax and breaking it off. I suppose the linear manufacturer forgot or didn't care about a protection circuit much like a flea market automobile audio amplifier lacks one. Yet down the street an old ham with a monstrous antenna on a tower never gave me one bit of interference. He was on every night and I would listen in occasionally. Nice old guy, gave me an old Hallicrafters receiver. Nothing like the smell of vacuum tube equipment. Nothing! No CB stuff here. I like the new digital modes, I like using JV COMM32 and copying SSTV at 14.230 in the evening and have a few TNC's, as well as the sound card programs. Got most of them. The thing is that some nights you just can't get an adequate signal. Tune CW, adjust the BFO, and you can make out a usable signal (I'm able to copy simple things presently). As far as the arrogance of some ham's, perhaps they feel as if they they've earned it. I don't blame some of them after seeing what you have to go through from a sample test. But then once again I couldn't grasp algebra in high school (I'm not a whiz with arithmetic) until I had a tutor who would put things in everyday terms rather than the instructor's textbook style of strict
if-you-don't-learn-it-my-way-you-will-not-be-able-to-at-all manner. The instructor was arrogant and he was good I suppose. He just didn't teach

well. I hear it's a real feeling of accomplishment making your first CW contact. I'll see if it's so soon. And when the "Old Guys" go "Silent Key", maybe I will get to someday be someone's first contact. Most people won't be able to decipher what is in those dih's and dah's but someone else may be spinning a dial and stop at some horrendously slow, misspelled, bad dot spacing signal and realize it is someone's first contact. It's not all bad as far as I see. This is a scanner group and most of you don't have a VFO dial and most of you are only on VHF. It's all good. I enjoy my hobby and will stick up for the tradition if I can. Met a guy, a rock band dude with a hand full of Russian tubes for his old guitar amp at Skycraft (my favorite surplus place). He asked me if I knew about tube amps. "Not really", I said, "A little". Kept arcing them and burning them out. Even had specs sheets for the Sovtek's. Pretty close specs from their American counterparts. 70's vintage amp it was, sockets looked good, nothing discolored or burnt. First thing came to my mind (remember the old Hallicrafters?). Hook this rocker up with new power supply filter capacitors for his "Obsolete Amp". Gave the dude my email address. 2 Days later I get an email. Fixed the problem and his high voltage and current was back almost to what the Sam's manual said it should be and the amp never sounded better. Maybe I won't be one of those "Snob" ham's. Time will tell. Get Your ticket and pass on an American Tradition. Maybe it will come back in style like bell bottom's have. And stop messing up my tv picture! Please reply UNDER this if you can and try to be positive, I thought about this a bit before composing it.
73's

Civil voice air traffic is kind of limited. I would suggest you get some decoding software that can do ACARS and you will get tons of traffic from Logan, all on one frequency 131.55. I use Airnav software, a bit spendy but worth the money in my opinion.

Hi Folks:

Sorry to report that we've
disposed of our entire stock
of 10.8 MHz IF Electra Bearcat
Scanner crystals. Most of these
were rather aged (20+ years) anyway and
somewhat off frequency. Seems
that there are several asking us
about where to get these rocks,
and here is the straight stuff, (at
least with regard to what we do!):

For old (less expensive) crystals,
try G&G in NY, (595) 786-8151, or
Jerry's CB in Toledo (419) 476-5983.
Jerry got the remainder that we didn't
move in the TigerScan promotions last year.

For new crystals (particularly good idea
for UHF freq. high multiplier circuitry)
try International Xtal out of Oklahoma
City. (800) 725-1426. Others make
these as well, but i haven't evaluated any
of them for quite a while.

In any event, happy scanning!
P.S.: still a few TigerScans in stock;
let me know if interested.

David A. Lovell, President
Electra Corporation
11915 E. Washington St.
Indianapolis, IN 46229

Of course, for $149.00 on sale, one can buy a brand, spanking, new
PRO-95, which is the functional equivalent of the '93, but has 1000
channels rather than the 300 channels the '93 has. The price of
progress can be steep.

I've had no problems working my pro-91 in trunk mode, but recently got pro-95 and, yes, I read the instructions more than 3 times, I'm confused.

I can set individual channels AM, FM, Motorola, or ED mode; and I can set a bank into non-trunk; MO, or ED mode. I've tried every combination, and get confusing results.

The only way that seemed to work is putting each freqs. into MO but leaving bank non-trunked. Even put in text for IDs, they show up fine, but data channel(s?) come through (MO:None and ID 976 for some reason)

Radio Shack tutorials (for other trunk scanners) were no help...

Notes:

If channels are in MO mode, and bank in MO mode, I get nothing.
If channels are in MO mode, and bank in Non-trunked mode, I get MOT talk IDs, but also get data noise
If channels are in FM mode, and bank in MO or non-trunked mode, I get conventional scan (no IDs, data noise, scans same as voice)

Something is strange with it...

My Pro-93 has a glitch in it that may be related to yours. When the scanner is properly programmed and you are actively listening to ANY transmission (trunked or not), something in the software will cause the scanner to stop on the Motorola data channel as if you are in manual mode listening to the frequency the current data channel is operating on: if you attempt to (de)activate a channel bank, add/remove the Delay for that particular active channel, or add/remove the 'attenuator' function for that active channel. mt Pro-93 is version 1.00. Maybe this glitch was fixed in later version. To remedy this: simply press function 5 (to open or close the bank the data channel is coming in on), allow the scanner to start scanning. Then manually select any channel in the bank where the Motorola data channel is, then press function 5 to open/close the bank to however you had it. Press scan and everything should be fine.
To prevent this, DO NOT perform the 3 steps mentioned above (that initially caused the problem).

You need to set both the BANK and the CHANNELs containing trunked
frequencies to the appropriate trunking mode. Non-trunked frequencies
in a trunking bank can be set to FM or AM.

Walt

Hey Fah Q Too,

just write something about the catholic church leadership
ALLOWING and IGNORING all those pedophile priests
that raped all those little boys.

i did and the asshole dropped the argument.

must be his problem ... when he was a young alter boy
he must have fallen in love with the padre who raped him
and then left him for a younger alter boy. he's still bitter after all
these years.

oh there goes another one. He is giving the canadians a bad name. i have
bought many things from canada with no problems. but this guy
has not delivered my pro 2006 here to me in Arizona that i have
been waiting for for 11 months.

HE IS NOT RETURNING MY EMAILS EITHER

Anyone who would send money or equipment to another country has always seemed less than smart (stupid) to me. How many times do you have to read about guys getting ripped off and having NO WAY to reach the other party or have any hope of recourse against these out of country thieves. At least in the USA you can pursue legal action. Nothing against Canada (USA does have a "few" friends up there) but just a general rule in my book

4287. Re: pro-95 channel v bank trunk modes

Newsgroup: rec.radio.scanner
Date: 2002-10-27 14:22:36 UTC
From: Ed1900@Rodatus.com
Message-ID: <3DBBF6AC.111BB2C@Rodatus.com>
Source record: 42274

Thanks, Eric. I put my old pro-91 and the new pro-95 side-by-side and fooled with this more.

The data channel, (a loud vibrator-like noise) is correctly masked on both.

The pro-91 manual says, (page 48), "If a channel activity bar turns on but you do not hear a conversation, the channel is probably being used for a telephone interconnect or a private call... your scanner does not monitor these types of calls.)

Where the pro-91 displays an activity bar, the pro-95 stops on the channel and I hear "hiss - pause - hiss - pause - hiss, etc.) While this is happening, if a voice channel begins, the pro-91 will monitor it (audio) even while the other activity bar is up, and the pro-95 is still stuck monitoring the "hiss", missing the activity on the voice channel! (It does show both the "hiss" and the voice talk ID's, alternating)

Ed

"Eric ....." wrote:

4288. Re: pro-95 channel v bank trunk modes

Newsgroup: rec.radio.scanner
Date: 2002-10-27 14:34:12 UTC
From: Ed1900@Rodatus.com
Message-ID: <3DBBF964.DCE3D246@Rodatus.com>
Source record: 42275

Also... If I manually monitor the data channel, and watch the talk ID,
it continually sounds like the data channel would, but the "MOT:"
talk ID changes back and forth from CNTRL to 00976 -- the ID of
the "hisser" that gets monitored when scanning...

4289. Re: pro-95 mode: channel or bank

Newsgroup: rec.radio.scanner
Date: 2002-10-27 15:03:00 UTC
From: Ed1900@Rodatus.com
Message-ID: <3DBC0023.88BE37A0@Rodatus.com>
Source record: 42276

Yes, I did. I only have trunk channels programmed into this bank and all them are in MO mode, not AM, FM, or ED. (I don't have any non-trunked freqs. in this bank, throw back to my pro-91 which can't do both in the same bank)

And the bank is in "MOT: none" mode -- still hear the "hiss" of a "telephone interconnect or a private call" whereas the pro-91 only lights a channel activity
bar but does not monitor audio. On the pro-95, this problem causes it to miss another active (voice) channel...

It's not working correctly.

4290. Scanner usage in "sniper" capture?

Newsgroup: rec.radio.scanner
Date: 2002-10-27 15:32:45 UTC
From: Tad Early <fenwick_island@yahoo.com>
Message-ID: <aph0vm$d1i$1@bob.news.rcn.net>
Source record: 42279

I'm wondering if I can get confirmation on this from those in the D.C. area or elsewhere.
I have heard, through basically informal discussions, that the description of the Caprice vehicle driven by the Washington-area "sniper" was broadcast by the media after picking up the description "unofficially" over a scanner and that the description had NOT been officially released to the media by police so that the murderers would not know that the police were aware of their vehicle. Of course, the truck driver who found the vehicle and blocked it in had heard the description of the Caprice through the media. Can anyone confirm this through reports of which I might be unaware?

Here's where I'm going with this. I know that Montgomery County-which was the center of operations--does not use a digital system, presumably making it much easier to monitor broadcasters (I hear them easily from 30-40 miles away). I have long felt that, in addition to the alleged benefits of such systems from the police perspective, they *decrease* citizen knowledge and involvement. Did the ease of monitoring the County system by media types actually lead to the capture in this instance? Does this make sense?

Arizona? Funny, but you have the same Canadian IP address
(NNTP-Posting-Host: 24.141.180.15) as the other 2 clowns that posted 2
minutes earlier claiming the same. If you're going to make up user
names and reply to your own posts, at least make an attempt to
disguise your headers so you don't look like an idiot. Since we all
know now that you're full of shit, you can just apologize to Mr .
Kelley, whomever he may be, and go away.

The Ontario Unlisted Frequency Guide is dedicated to scanner radio hobbists. On here you will find lists of Ontario radio frequencies that are not listed on any web page, published in any scannner book (Haruteq or Scantrix) or listed in the government frequency list (Industry Canada's TAFL). The Ontario Frequency Guide mailing list (oufg) is for scanner radio hobbyists so they have a public forum to be able to chit chat with each other about anything relating to the radio scanner hobby in Ontario as well you will be able to recieve updates of what changes I have made to the Ontario Unlisted Frequency Guide web pages.

The engineers at the former KMPC in Los Angeles made a house call to
my Uncle's house when their broadcast was bleeding into one of his
home audio amps. I would also recommend going that route waaaaaay
before thinking about the FCC. Besides, chances are very good that
the station is operating within it's legal limits.

Radio Shack does not sell cables for the PRO-95. Scanners Unlimited does but they are expensive. For more info on building a cable or buying it at a better price visit www.ulster.net/~petrow or http://members.cox.net/kplotkin/scanner.htm.

The simple answer is .... NO. Landline calls can't be "listened in"
on as with a cordless phone. Sure there are some links in the chain
which may be wireless, but chances are those links are miles and miles
away.

Try:
http://www.pfranc.com/pclink/ScannerDeal.shtml

I email them as to whether it will work with the pro-95 and got this response:

"I had a customer tell me there was a problem with our cable working with the 95

at first, but it was fixed and works now... maybe a software setup problem as my cable needs DTR and RTS to be set right."

I'm unhappy with my pro-95 (got it yesterday, may return it tomorrow)

It doesn't handle trunks as well as my pro-91, and yes, I read the instructions, and yes, I have both the trunk channels set to MO mode and the bank set to MOT mode -- my pro-91 recognizes a non-voice channel (tele interconnect or private call) and shows the activity indicator but does not stop on such a channel. The pro-95 does monitor such a channel thus missing any other (voice) activity.

Hmmm. After I read my post, I thought I'd better clarify:

I am unhappy with my new pro-95 scanner -- I did not purchase a cable yet so I have no 1st-hand experience with the cable.

I'm still interested in getting a scanner that can be programmed from my computer. I have a medical condition which makes it very difficult for me to push buttons (or even type!). Every keystroke hurts.

Anyone have suggestions re: trunking scanner that I can program from my computer?

To the joy of many, but to the sadness of many more, this sacred plant, which has done no harm to anyone, which hasn't caused a single injury or death (unlike Ephedra) has been drafted onto a bill October 10, 2002, asking to make it a Schedule I substance. This action was the result of a vender advertising irresponsibly in a Rockland County newspaper for 2 years straight. This does NOT mean that the scheduling of Salvia is imminent. Mr. Baca has HUNDREDS of bills that he has written that are still waiting to be heard. Either way, even if our store has to close, our website will always remain here for reference, information, and as a testament to this extraordinary plant.

Goto www.iamshaman.com to buy enhanced Salvia Divinorum leaf.

No, it doesn't make sense. As soon as the the task force had the car description they gave it out. If they didn't want the culprit to know that they knew, why would they release it at all?

And there had to be a greater probability that the sniper would be listening to a scanner than the average citizen. So I don't think they would have been transmitted sensitive information "in the clear" over their radios.

In fact, the vehicle was stopped earlier in the spree several times by police, but was not searched because everyone was looking for a white van.

No, it uses a custom cable that comes with the radio. The end that plugs into the computer serial port is a standard 9 pin D-shell type.

The Ten Usenet Commandments
The brothers Usas and Senda, despairing of the state of UseNet, went unto the mountain at the feet of Net.God. "Oh Net.God, there is confusion and sorrow in your place of UseNet. The people worship false gods and knowst not your will."

Net.God spoke unto Usas and Senda. "YOU PLAYETH THE GAME BY NET.GOD'S LAWS, OR THE BAT WILL BE DEPOSITED IN THE LIGHTLESS PLACE."

Usas, being devout and greatly afeard of Net.God, prayed. "Lord, how am I to know your will?"

And Net.God, being wise in the ways of Usas, spake thus, "THOU SHALT OBEY THE LAWS OF USENET, THERE BEING TEN, OR BE DAMNED UNTO THE LAST GENERATION," for He is a merciful God.

So did Net.God deliver unto Usas the Commandments.

THE TEN USENET COMMANDMENTS

1.. Thou shalt not battle over operating systems. I am wise and in My wisdom have created diverse and various operating systems. Be true unto the chosen system and neither covet nor despise your neighbor's operating system.
2.. Thou shalt not battle over nationalities or tribes. I have placed the UseNet aside from all things, and granted it unto Usas. I am blind to the place in which pray, all prayers being equal in Virtual Heaven.
3.. Thou shalt not flame. Your Net.God has anger in His heart for those who flame without cause or who do persecute the spelling of others. In my wisdom I have created opinions to be as armpits; your's is warm and secure but thine neighbor's stinks. Tolerate others as you would be tolerated. Flames are Mine, and I do preserve some good ones for these people.
4.. Thou shalt not MAKE-$$$$-FAST. I have made Usas wise that the love of money is the root of all evil. He who angers his neighbour by the wasting of bandwidth shall anger Net.God, and also by spamming or cluttering. I reserveth a special Hell for these, and great shall be their sorrow.
5.. Thou shalt quote meaningfully. Net.God loves not the man who taketh more than needed nor he who quoteth all, including the sig. Render unto Net.God what is Net.God's, render unto Usas what is Usas; credit Senda for he is good.
6.. Thou shalt e-mail personal prayers. I have rendered unto Usas the ability to talk to all the peoples of the world. I tell you, it is better to whisper into an ear than shout into a crowd.
7.. Thou shalt not me-too. Make not your prayers to the Senda the knowledge of thine neighbour. The wisdom of Usas is the ability to speak to

all people, and to choose to speak to one.
8.. Thou shalt not cross post unwisely. The place I grant thee for rec.pets.cats is not the place of comp.unix.advocacy.
9.. Thou shalt not post tests in profusion. I giveth unto you the lands of alt.test to learn of your God. Tend to Usas as I do My calves; let the new gather the strength to stand before joining with the herd.
10.. Thou shalt send complete offerings. Send not to your God incomplete offerings. If the parts of the sacrifice number all the people of the world times ten your God will not be pleased to receive all but two. The blessing of Net.God is upon he who posts fewer large parts that he who posts many small ones.

I have an Icom R3 for sale. US Version (Sorry!) but otherwise in most
excellent shape. Includes all the original accessories and box,
(Charger, rechargable battery, AA spacer, antenna, felt bag, manual)

$300 shipped CONUS.

I also have an Icom R10, also US version, with all original accessories
and box. Again, excellent condition.

$200 shipped CONUS.

Will consider trades for Opto Scout or Explorer, or HF rig (R71 or R75,
or even HF ham transceiver like IC-735 etc.)

Enjoy!

From: Ed1900@Rodatus.com
Message-ID: <3DBC77DC.E27CB7D5@Rodatus.com>
Source record: 42162

I'm guessing that it is a legitimate "talkgroup" -- but for digital communications -- it sounds like the hiss of higher speed modems. It doesn't sound like a voice scrambler. Bummer indeed.

What surprises me is when I put my pro-91 and pro-95 side-by-side. The 91 "lights" a block indicating activity, but it keeps scanning (watching the data channel) for an active voice channel. On the 95, when it is already in scan mode, it stops on this 00976 "hiss" channel, I push scan, if finds the 00016 that the 91 found. Also, if I begin a trunk scan on both at the same time, the 91 gets the data channel and monitors the 00016 active channel faster, to me, much faster.

Fuck you ignorant bastard.
Why the hell did you even bring up his race at all you politically
correct water boy. Moose is a stupid jackass which doesn't have
anything to do with his race.
I can't think of any blacks I admire so what is your point.

Nice of them to include the cable. RS could learn a lot from them. I
think they're nuts for not selling the cables to go with the scanners.

I bought one there earlier this summer and wanted the cable so I could
program it. First they sold me some other cable that didnt work.

When I brought it back, I was told that no, they don't sell the one I
need. But I can order it, along with some software for $80 or
something. I said no, I'll just do it by hand.

A few hours later I decided I didn't like the scanner anyway, returned
it, and ordered up another BC780xlt :)

Bearcat BC895XLT, works perfectly EXCEPT for one thing - the backlight doesn't work, which hasn't been a problem for me, since I have it hooked up to my PC. Manual, wall wart, and original box included, but no antenna. You'll want to hook this one up to an outdoor antenna, anyway. I'll take $140 shipped UPS with tracking # etc. CONUS only! First serious respondent gets it!

BC785D is an analog scanner manufactured with the capability to add an optioal digital card to the scanner which allows the additional reception of APCO 25 digital signals in addition to analog frequency reception.

>Orders are now being accepted on a first in first out basis.
>BC785D scanners are anticipated to ship in late December, 2002.
Optional digital card (BCi25D_APCO) may be ordered by clicking on link at bottom of this page. This optional card allows the BC785D and the BC250D to receive APCO 25 digital transmissions.
Scanner World does not charge credit cards until merchandise is shipped to customer.

anyone on board have frequencies for PINAL COUNTY ARIZONA.
I live in the town of Maricopa, about 35 miles south of Phoenix.

I do have 158.76 for Pinal County Sheriff, Plus since many of hte
Phoenix area agencies have a repeater on South Mountain, I can get many
of these transmissions also. I am line of sight to South MOuntain and
can see the red beacons on the TV towers from my patio at night.

I also noticed that the Arizona Highway Patrol/Department of Public
Safety (DPS)
frequencies of 460.025 and 460.40 are quite active here.

I live not far from Hghway 238 (Maricopa-Casa Grande Highway) a main UP
(Union Pacific) rail line parallels the highway. As the train tracks
East into Casa GRande, the tracks turn south and follow I-10 to Tucson
before headding east again towards El Paso.
I believe Southern Pacific merged with Santa Fe, who in turn merged ir
was eaten by Union Pacific. Some of ht train markers say SP, while
others UP. 161.4 was quite active today. I heard a conversation about a
car (automobile carrier) train then a while later that train passed by

I also have the Albuquerque center ATC frequencies...these are easy to
hear from their Globe repeater.

Amateur Radio Newsline™ #1315 – October 25 2002

Amateur Radio Newsline™ report number 1315 with a release date of Friday, October 25 to follow in 5-4-3-2-1.

The following is a Q-S-T. A ham radio operator may have played a part in the apprehension of the DC sniper suspects, the U-K says no more new operators in its 5 megs experiment and the ARRL says no to unlicensed visitors sharing a United States ham radio band. These stories are first on Amateur Radio Newsline report number 1315 coming your way right now.

**

RESCUE RADIO: HAM RADIO HELPS NAB THE DC SNIPER SUSPECTS

A ham radio operators may have played a role in the apprehension of two men wanted in connection with the sniper shootings in the Washington DC area. ABC News interviewed the trucker who called the police to report he had spotted the two suspects. When asked how he heard about the description of the vehicle, his response was that he heard it while listening to Bozo on WLW radio

Now, Chip Margelli, K7JA tell amateur Radio Newsline that Bozo in real life is Dale Sommers; callsign WB6OM. Sommers hosts a very popular late night trucker's show on the 700 Kilohertz clear channel station. His show is mainly music and information of interest to long-haul truck drivers. The description of the wanted men was just that. As a result the pair are in custody thanks to a trucker who was paying attention to what WB6OM had to say as “Truckin Bozo” over WLW in Cincinnati. (K7JA)

**

INTERNATIONAL: NEW PERMITS FOR THE UK 5 MHZ EXPERIMENT GOING ON HOLD

What happens when a propagation experiment gets a bit to popular? If you are a telecommunications regulator in the United Kingdom you might be inclined to temporarily suspended issuing further permits for hams to take part. And that’s what’s about to happen in regard to the United Kingdom’s 5 Megs experiment. From Nottingham England, here’s Jeramy Boot, G4NJH:

--
The Radiocommunications Agency says that applications for 5-MHz band experimental Notices of Variation or NoV’s have far exceeded their expectations. The R.A. now considers that the risk of congestion on the five spot frequencies allocated may be detrimental to the overall success of the experiment.

Accordingly, the RA has decided not to issue any further NoV’s for applications received after the 31st of October. The position will be kept

under review and occupancy monitoring of the frequencies will be carried out. It is hoped that ollowing this exercise - more NoV's could be issued, or a numerical limit to the number of NoVs can be set based on usage and congestion. It is likely that an announcement can be made later this year for action early in the new year.

Jeramy Boot, G4NJH.

--

The United Kingdom 5 MHz experimental band was made available to that nations individual Full Class A hams by means of a Notice of Variation issued last July. The five 3kHz-wide frequency allocations are permitted for the purposes of antenna and propagation experiments. The Radio Society of Great Britain is in charge of the overall management of the project. (RSGB)

**

INTERNATIONAL: AN IARU UPDATE FROM PRESIDENT LARRY PRICE W4RA

Still in the international arena, we have a follow up to last weeks story on the International Amateur Radio Union. With it, here's our producer Bill Pasternak, WA6ITF:

--

We received a very nice note from International Amateur Radio Union President Larry Price, W4RA, following last weeks story about the recent meeting in Morocco. According to President Price, the news isn't the IARU observer status at Plenipotentiary Conferences. He tells Newsline that IARU has had this status since the 1998 Conference in Minneapolis. At that time the International Telecommunications Union Convention rules were modified to give the same privileges at Plenipotentiary Conferences as IARU already had at Radio Conferences.

President Price says that the real news was the special station, CN8UIT set up at the conference center in Marrakech. He says that this was a follow on from a similar station set up by the ARRL in Minneapolis and one eight years ago in Kyoto, Japan from the JARL.

Buy the way, the CN8UIT call is based on the French pronunciation of the International Telecommunications Union. For those of you unaware, the International Amateur Radio Union was founded in 1925 specifically to represent our service at international conferences. It has done so -- with great success -- ever since.

With a thank-you to IARU President Larry Price, W4RA, for that neat note, I'm Bill Pasternak, WA6ITF, for the Amateur Radio Newsline.
--

In his note to us President Price says that the IARU has taken part in every major conference in modern years. Also that it will be there for all of us at WRC 2003 in Geneva Switzerland. (ARNewsline™)

**

INTERNATIONAL: ARRL ASKS FCC TO DENY US USE OF EUROPEAN/UK FRS-TYPE RADIOS ON 70 cm

The ARRL is saying no to visitors using unlicensed radios in our ham bands. Amateur Radio Newsline’s Bruce Tennant, K6PZW, has more:

--
The ARRL has asked the FCC to deny a petition that would set aside spectrum in the 70-cm ham band for non ham use. This, for use by visitors from Europe and the United Kingdom to use their Personal Mobile Radio transceivers while in the U-S.

According to the ARRL Letter, the request was filed by Dr. Michael Trahos, KB4PGC of Alexandria Virginia. It asks that European PMR 446 type handie-talkies be allowed to operate license free while overseas travelers were in United States jurisdiction. PMR 446 hand-helds are similar to the US Family Radio Service transceivers but operate on eight channels between 446.0 and 446 .1 MHz. at up to a half watt out.

In his Petition, Trahos said that existing Part 97 Amateur Service rules precluding the use of PMR 446 radios in the US were essentially unenforceable and that granting his petition would have minimal impact on existing amateur operations. The ARRL countered by saying that there are obvious enforcement problems associated with the Petition. It says that putting the unlicensed users on a ham band is a formula for serious interference problems to be created.

For the Amateur Radio Newsline, Im Bruce Tennant, K6PZW, in Los Angeles.
--

As an alternative, the ARRL recommends that European and UK visitors simply purchase inexpensive FRS transceivers to use during visits to the United States. (ARRL)

RADIO LAW: FCC REJECTS AMATEUR'S PETITION FOR RECONSIDERATION ON CC&R ISSUE

The FCC has turned down a Petition for Reconsideration filed by a Florida amateur. This, of the Commission's 2001 decision to deny the ARRL's Application for Review in RM-8763. That proceeding concerned the League's effort to have the Commission include privately imposed deed restrictions under PRB-1.

The ARRL says that the FCC dismissed its Application for Review last December 18th. At that time the FCC noted that PRB-1 more than adequately protects federal interest in promoting amateur communications from overly restrictive regulations.

Not long after, W. Lee McVey, W6EM, of Bradenton, Florida, filed his own Petition for Reconsideration Mc Vey claimed that it presented additional evidence that the FCC had not considered in dealing with the ARRL's petition. But the FCC disagreed. It says that McVey offered up no new evidence in the matter and has turned his petition away. (ARRL)

**

ENFORCEMENT: INDONESIA PIRATE UPDATE

An update now to our recent story on the problems being caused by pirate stations in Indonesia. Not only are they making life difficult for hams around the world. The pirates are also playing havoc with domestic Indonesian ham radio communications as well. With more, heres Q-News Graham Kemp, VK4BB:

--
Many reports covering Indonesian non amateurs using our frequencies in the 40, 20 and 10 metre bands are making their way to the IARUMS. There seems absolutely no control over their working and existence by the local Government.

It is very difficult for licensed Indonesian amateurs to find a clear frequency in the lower edges of 40mb for their authorised cmmunications. Generally the licensed Indonesians are around 7050,7055 and 7060 kHz for their traffic. 7050 kHz frequency, carries CW lessons for the intending future amateurs. Otherwise, the licensed ones, operate in their own nets and you can clearly identify their call signs in between, as per standard practice, though the entire conversations are in Indonesian.

Another frequency regularly used by a SE Asian group for two-way non amateur communications is 14044 J3Eu mode around 0100 UTC every day. IARUMS need the services of those knowing SE Asian languages to identify them, they may be from XV, 3W or XU area.
--

If you are a resident of South-East Asia and heating this newscast, you are requested to watch 14.044 MHz and help identify the unlicensed users. Please send that information to your nations Intruder Watch Coordinator as fast as you can. (Q-News)

**

ENFORCEMENT: PIRATE BOARDCASTING IN SAN DIEGO CA

Back here in the U-S-A, Bob Gonsett’s CGC Communicator reports on an entity calling itself Free Radio San Diego which announced plans to begin broadcasting on on 96.9 MHz.. The transmitter location and parameters are unknown but one person reports being in the town of Carlsbad California and seeing a spray-painted stenciled sign on the concrete walkway promoting Free Radio 96.9. Also, the operator of the station does have a web site at

www.pirate969.org What action the FCC may be planning on this one is unknown. (CGC Communicator)

**

ENFORCEMENT: BE CAREFUL ON 146.52

The has FCC issued and then retracted advisory notices to five Mid-West hams telling them that they were talking to long. This, on the national calling frequency of 146.52 MHz.

The letters said -- and we quote: “The frequency 146.52 MHz is customarily used, and is called for under the band plan, as a simplex calling frequency for Two Meter operation. Numerous communications from your station during the above dates have lasted from nearly half an hour to an hour. While band plans are not mandatory under the Commission’s rules, the Commission depends upon them to minimize the situations in which Commission intervention is required, and they comport with good Amateur practice under our rules. Please review Section 97.101 of the Commission’s rules” -- end quote.

The FCC origionally said that the October 16th letters went out following a review of complaints about the operation of their Amateur stations between September 19th and October 6th. The retraction was issued on Wednesday October 23rd. No reason was given for the withdrawal. (FCC)

**

ENFORCEMENT: FCC JUDGE FAVORS SCHOENBOHM'S RETURN TO AMATEUR RADIO

The ARRL reports that an FCC Administrative Law Judge believes the regulatory agency should permit Herbert L. Sahoenbohm to once again hold an Amateur service license. In rendering his decision, Judge Arthur I. Steinberg says that he believes Schoenbohm now appears to hold the requisite character qualifications to be a Commission licensee.

The FCC had designated Schoenbohm's license renewal application for a public hearing. This based on character issues stemming from a 1992 conviction and alleged lack of candor during subsequent FCC hearings on the matter. The former KV4FZ lost his bid to renew his ham ticket in 2000. He applied for a new license in 2001 which lead to the recent recommendation by Judge Steinberg. A final decision on whether or not to re-license Schoenbohm now must be made by the FCC itself. Schoenbohm has also passed an Extra class exam that is also pending. (ARRL, FCC)

THE INTERNET: DENIAL OF SERVICE ATTACK THWARTED

What investigators are calling a sophisticated and large-scale assault against the World Wide Web has been thwarted . But not before nine of the thirteen servers that manage global Internet traffic were crippled for a short time on Monday October 21st.

The FBI's National Infrastructure Protection Center said that it was aware of the denial of service attack and is addressing this matter. Service was quickly restored after managers put defensive measure in place bringing the attack to a halt. Most Internet users did not even notice the hour long attack whose origin is still not known. (WebNews)

NAMES IN THE NEWS: PAUL BLUMHARDT, K5RT, JOINS CQ STAFF

Paul Blumhardt, K5RT, has joined the staff of CQ Communications, Inc. as Director of New Business Development. Blumhardt, of Rowlett, Texas, will oversee efforts to broaden the base and the scope of the company's marketing activities.

According to publisher Dick Ross, K2MGA, Blumhardt has actually been part of the CQ "family" for the past three years, serving in a volunteer capacity as Worked All Zones Award Manager. Blunhardt holds an Extra Class amateur license, a commercial FCC General Radio Operator License and degrees in both engineering and business. Among his personal operating achievements are 5-Band Worked All Zones, 5-Band DXCC, 6-Band Worked All States, and #1 DXCC Honor Roll.

As all of you are aware, CQ Communicatoins publishes magazines, books, videos and other materials for the amateur radio and hobby radio fields. They are also a co-corporate underwriter of the annual Young Ham of he Year Award. (CQ)

THE WAR ON TERROR: A BANNER AND A LINK

Pieter Wycoff, KG4UPX, says over the Internet that he has found an important tool that every concerned ham should have on his or her personal website. Wycoff says that the Homeland Security Knowledge Database has a banner that can be posted to any website notifying visitors of the current status of alert to

terrorist threats.

The site also contains lots of other information relevant to homeland security and how you can play a part. You can even sign up to receive threat notification updates by e-mail. To learn more on how you can add this feature to your ham radio website, take your web browser to http://www.twotigersonline.com/resources.html.

And for those not aware, right now the nation is under color code Yellow which indicates an elevated level of alert. (Via Internet)

**

CONVENTIONS/HAMFESTS/CONFERENCES: AMSAT IN FT. WORTH IN NOVEMBER

The 20th annual AMSAT Symposium will be held November 8th to the 10th in Fort Worth, TX. The gathering actually kicks off with an Early Arrival Activity on November 7th and ends with the conclusion of the Board of Director's Meeting on the 11th. More information is in cyberspace www.amsat.org. (ANS)

**

SATELLITE NEWS: FCC DECLINES TO APPROVE ECHOSTAR-DIRECTV MERGER

The FCC has declined to approve the transfer of licenses from EchoStar Communications Corporation and the Hughes Electronics Corp. subsidiary DirecTV to form a new business entity. The FCC said that the companies did not demonstrated that approval of the transaction will serve the public interest,convenience, and necessity. The complete story is on the web at www.fcc.gov/Daily_Releases/Daily_Business/2002/db1010/DOC-227263A1.doc (CGC)

**

HAM RADIO IN SPACE: SOYUZ ACCIDENT SOLVED

A Russian state commission has set October 30th as the launch date for a Soyuz rocket carrying a three-person crew to the International Space Station. The decision was made after investigators determined that it was a probably a production glitch rather than faulty design which led to the October 15th crash of a similar launch vehicle.

For a while, it appeared that ham radio operations and everything else on the International Space Station might come to a grinding halt. Russia had threatened to suspend resupply launces following the mishap with the unmanned Soyuz ship which exploded seconds after liftoff, killing one person on the ground and injuring 20 others.

Such a delay would have had a devastating effect of future habitation of the space station. This is because the current emergency evacuation lifeboat vehicle is fast approaching the date on which it must be replaced. Only a Soyuz launcher can carry the replacement lifeboat to the ISS. If the Soyuz launchers had been kept on the ground, operations on the ISS might have been suspended. Thankfully, that wont be the case. (Published news reports)

**

INTERNATIONAL - RUSSIA: HELP LETTER MAY BE PHONY

A electronic letter purportedly from a Russian ham asking for financial assistance may be a phony. Then again, maybe not.

The letter showed up in hams mail boxes and on the numerous Internet news groups beginning on October 18th. Signed by a person calling himself Valentin, the note asks for donations of money and other gear. What has made many suspicious is that the writer never gives his call sign and does not use any ham radio terminology.

A number of people believe that the letter was actually sent by a spam-mail generating company or someone with a program that harvests e-mail addresses from the World Wide Web and generates automatic e-mail to them. There is even some speculation that the message did not come from Russia as the note itself claims.

Then comes a posting to the QCWA remailer from Lee Manning AK7T. Manning says that he e-mailed the writer of the message. Valentin replied that his callsign is RA3XAA. According to international call sign listings, RA3XAA belongs to Valentin Mikhaylin in Kaluga Russia. We have e-mailed him and are waiting to find out if he is the person who issued the letter and how he was able to get so many e-mail addresses of United States hams.

Meantime you might want to keep in mind two words. Caviat Emptor. Buyer -- or in this case -- giver beware. (QCWA Remailer, others)

**

INTERNATIONAL - THE NETHERLANDS: AUCTIONS NOT MANDATORY

Media Network says that a judge in Rotterdam has ruled that the next Dutch government will not be required to auction the commercial radio frequencies to the highest bidders. The ruling on Friday October 11th will impact on future spectrum auctions in that nation. (Media Network)

**

DX

In DX, GB2EVR is a new permanent special event operation for the Eden Valley Railway in the U-K. The station is located at the Warcop railway station, six miles east of Appleby-in-Westmorland, Cumbria. (GB2RS)

Also, JA2ZL will be active as F0/JA2ZL from Morea Island in French Polynesia from the 30th of October to 2nd of November. He plans to operate on 40 to 10 meters mainly SSB, with some CW and RTTY. (GB2RS)

And a milliwatt Beacon is on the air on 11 meters from Northern California. AOH is at the top of a very high mountain and operates under FCC rules part 15. This is the same as child walkie-talkie and can be heard on 27.125 MHz. The Beacon is on the air trying to make a point you don't need 20 kilowatts to DX. If you hear it, QSL to aoh@ computermail.net (APC News)

**

THAT FINAL ITEM: INNOVATION IN AMATEUR RADIO REWARDED

And finally this week, a big honor for a deserving ham. Amateur Radio Newsline’s Don Wilbanks, KC5MFA, has the details:

--

Brad Phillips ZS5BP has been rewarded for his innovation in Amateur Radio. This by being named to receive the South African Radio Amateur of the Year Award.

Phillips received the honor for his work in introducing the Internet Repeater Linking Project – or IRLP to that nation. South Africa Radio League President Sid Tyler congratulated Phillips on his achievements saying that IRLP is as much part of amateur radio as is HF.

But that’s not all. The award itself says that IRLP offers new opportunities for the development of the amateur radio service in South Africa. This is because it brings amateur radio within the reach of young people in schools and the older generation who, after retirement, often do not have access to High Frequency stations or other ham gear of their own. Phillips work brings ham radio to both.

For the Amateur Radio Newsline, I’m Don Wilbanks, KC5MFA.

--

The South African Radio Amateur of the Year Award is sponsored by Siemens. Its given annually by the South African Amateur Radio Development Trust to a ham radio operator who has made a major contribution to the Amateur service. (SARL)

ScannerWorld.com - The largest dealer of scanning radios in the world!Didn't anybody ever tell you that it's rude to post HTML in a Newsgroup? Take that HTML information, and create a page on your site; then provide a link here... I was able to read it fine, however a number of people on here can't... No point in ignoring their business, since it seems that you are aimed at selling these things...

** Just a note for those that live in Michigan, Colorado, Minnesota, Austin Texas, and anywhere else that use APCO 25 in the completely digital state. These places use 9600 baud trunking, and the new scanners can not trunk-track the system... DON'T waist your money... You can still decode the transmissions, but the only way you can do it is to program the frequencies in and scan them the old fashioned way...

>
It is possible the 91 ignores any data talkgroups, while the 95 will find
them. I also have a pro-91, but no systems to test this theory, since all
the systems local to me have their data traffic on a separate system.

Hello,

Where can I find out if these towns in NY state use this system?

(Hartsdale, Scarsdale, Yonkers)

Thanks.

4361. Riverside (CA) County Sheriff Comms

Newsgroup: rec.radio.scanner
Date: 2002-10-28 17:01:43 UTC
From: Mountain Bob <rtiberiNOSPAM@csusb.edu>
Message-ID: <3dbd6ce8.6319406@news.calstate.edu>
Source record: 42101

I've been monitoring RSO (Moreno Vallley / Temecula / Mira Loma) quite successfully for the last month or two, thanks to help from a couple subscribers to this newsgroup.

However, in the last two weeks that I am no longer getting these comms. I verified that I have the freqs in LCN order and that my PRO93 knows that the bank is EDACS and that each freq is EDACS.

If I manually move thru the freqs I can hear communications transmissions, but in "trunk-tracking" mode I get absolutely nothing. Does anyone know if there has been a freq change for the West end of Riverside County?

Thanks in advance,

Mountain Bob

No one expects.... uh never mind ;-)

On a serious note, I looked at that page and used the FCC ID# to look
up the certification and found a complete block diagram and schematic
of the base and handset; the phone doesn't appear to be scrambled at all,
it's compandored using an off-the-shelf Toshiba chip.

It's just wideband FM-modulated compandored analog. I wouldn't
use it at my house.

Or get in touch with the Editor of SWM, Kevin Nice.

He has a system working which he documented in a not too
distant issue of the magazine.

Other than 1000 channels in 10 banks, what are the advantages of the
PRO-95.

And what good is it going to be to have 100 channels in a bank when
for any given EDACS system you will only be able to input the 7 or 8
freqs associated with that system?

Seems like a lot of overkill.

That's my 25c (adjusted for inflation).

Yes, the PRO-93 works quite well and can be programmed from a
computer. I haven't seen the PRO_95 yet, but (thanks to Microsoft) I
have learned over the years to try to avoid buying any "new" release
of anything.

Bob,

Realize that being 25 miles away from the airport, you probably won't get alot of the ground and clearance delivery stuff, and most likely you will not hear the controller talking to the planes in the air on approach, tower, departure or center. But you will most definitely hear the airborn acft. If you do in fact hear the controller, good for you.

Just for future reference, is your scanner vhf and uhf capable, or only vhf?

Also, are you close enough to Hanscom and Norwood to hear the planes? Are there any other smaller airports nearby? Am I asking enough questions?

Take it easy.

I believe that they vary per location. The common ones, 10-20, 10-4, are universial, I think.

I just listen and try to figure it out. A 10-50 is a car accident -- we have lots of them.

I went to local pd and sherrif's offices and was told that they don't give them out to the public.

different here. 10-36 usualy means a bomb threat. here it means they are starting their shift or leaving their shift. I forget. one is 10-35 and the other is 10-36. like here. 10-11 is a traffic stop and if they say they are 10-11 they have to state their 10-20. 10-20 is still location. it varies from state to state though. same as province to province. sort of. hehe. good luck. as a local ham. they should know.

The ten codes are different in every area. No one was trying to be smart with you, they were trying to tell you that there are 1000's of ten code tables.

As to acting so damn "wronged", you got what you paid for. No one owes you anything.

Yes, search message titles for pro-95.

I just ordered the PC cable from blackbagsoftware (what a name!)

1,000 channel memory is wonderful esp. since some trunked systems have
>30 channels.

PC programmable -- I can't wait to try it!

I believe that you would find it most helpful to indicate the areas/jurisdictions your wife wishes to monitor. Although some are universal, 10 codes can vary from department to department. If you are looking for Suffolk or Nassau County P.D.'s, or NYPD codes, I can point you in the right direction.

I looked through this newsgroup and didnt find any message titles
for pro-95. That was the first thing I did.

But thanks for taking the time to reply.

10 codes vary from local to local and even differ with different services in the same local. I learned my local ones by listening and figuring them out.

Sure. I had some reservations at first but that's all in the past.

For the price, (it's still on sale!), wow! I've only programmed local trunk system so far, I'm waiting for the PC cable... But side by side it performs as well as my pro-91. Sounds better (audio-wise) and seems to have better reception also.

I like it.

Press the "scan" amd the "s-set" button at the same time.
Rotate the tuning knob to select "Lo" or Hi".
Press "s-set" or "scan" to resume.

It may not make sense but the following taken from the N.Y. Times coverage indicates that there was in fact a time lapse in the release of the information and a period of time in which the media was in possession of the information before it was released publicly by the police:

"As early as Tuesday evening, some police agencies in the District of Columbia area were given a picture of Mr. Muhammad and a description of the Caprice.

On Wednesday evening, at 6 p.m., Chief Moose was scheduled to hold a news conference, where he was planning to reveal Mr. Muhammad's identity to the public, as well as the New Jersey license plate.

But there was a delay of more than six hours. The delay resulted from the wait for an arrest warrant for Mr. Muhammad on firearms violations in Washington State, according to officials.

It may have been a lucky break. If the warrant had come through more quickly, then Mr. Muhammad might have heard the police bulletin and left the area, officials said. Instead, Chief Moose took the microphone at 12:05 a.m. and released the information, though some news organizations had put it out as early as 10 p.m."

The question then becomes how did those "news organizations" obtain the information. Obviously a leak from within the police is a possibility, but, considering how tightly controlled the flow of information was, it certainly could also have been through scanner usage. It seems established by this report that the media *did not* receive the information at the same time as the general public.

10 codes do vary greatly area to area. In our area, since our 911 centers came in to existence, the 10 code is used little. I can almost count on both hands, the codes used. Most of them are for Motor Vehicle accidents (10-45), DMV info (10-27/10-28), Acknowledgment (10-4), In route (10-23), Arrived at scene (10-24), Busy (10-6), Out of service (10-7), In service (10-8). The State Police throw in a couple more for good measure. The Fire and EMS use the basic ones. But as you can see, not many are used. MOST of the communications are done plain English. What used to be a "standardized"(?) Police Phonetic Alphabet, isn't even followed as it once was. And even that, varied in some areas.

Since scanners came out on the market, in many 10 codes I have seen - some appearing in National and even regional listings, they had 10-45 listed as "Animal Carcass in lane". In our area, 10-45 has always been used for an Automotive accident. Listening to a call is often the best way to pick out what is being referred to. Often, you can "read between the lines". Our area is so tight knit, it isn't long before the public at large gets the gist of what is going on.

BC785D is an analog scanner manufactured with the capability to add an optioal digital card to the scanner which allows the additional reception of APCO 25 digital signals in addition to analog frequency reception.

> >Orders are now being accepted on a first in first out basis.
> >BC785D scanners are anticipated to ship in late December, 2002.
Optional digital card (BCi25D_APCO) may be ordered by clicking on link at bottom of this page. This optional card allows the BC785D and the BC250D to receive APCO 25 digital transmissions.
Scanner World does not charge credit cards until merchandise is shipped to customer.

What is your opinion about this kit?
http://www.testequipmentdepot.com/ramsey/kits/aa7.htm

I want to connect it with my external home made dipole
Any other suggestion?

Thanks

4404. FS:Alinco DJ-X10T Communications Receiver .1-2 khz

ALINCO DJ-X10T WIDE RANGE SCANNING RECEIVER

THIS RADIO IS IN ABSOLUTELY NEW CONDITION!
TWO MONTHS OLD AND NEVER OUT OF THE HOUSE
A HIGH QUALITY RADIO......ALL METAL CONSTRUCTION

MULTI-MODE RECEIVER WITH 1200 MEMORY CHANNELS
40 Channels in 30 Banks......DUAL VFO's
100 KHZ THROUGH 2 GHZ COVERAGE (cellular excluded)
WFM, NFM, AM, USB, LSB, and AM MODES
THREE LINE ALPHA-NUMERIC CHANNEL DESIGNATIONS
MULTI-FUNCTION CHANNEL SCOPE DISPLAY (spectrum analyzer)
MULTI-SCAN MODES
INTERNAL HELP FUNCTION
BEGINNER AND EXPERT OPERATING MODES
AUTO TIMER, ON/OFF, CLOCK
BACKLIT DISPLAY AND KEYS

THIS IS A GREAT RADIO FOR THE PROFESSIONAL OR BEGINNER
IT DOES IT ALL!
CHECK THE ALINCO WEB SITE FOR A DETAILED LIST OF ALL IT'S BELLS AND WHISTLES!

$250.00 Shipped anywhere in 48 states

Around here MVAs are 10-50 (modified with PD for property damage only, or
PI for personal injury), or 10-57 for a hit-and-run MVA. As you say, they
do vary widely. The subset of codes you hear the most from one department
may vary from the most-often-used codes from another.

There is no "universal" 10-code list. I would hazard a guess that just about every agency has one or many 10-code items that are unique to themselves. What agency(ies) are you interested in? Then we can probably help you zoom in.

The non-standardization of codes has caused a lot of agencies to leave "codes" pretty much and go to "clear speech." Codes can REALLY be a problem during large incidents or whenever multiple agencies are working together. In general, the fire service seems to be ahead of law enforcement in getting away from codes.

As someone else mentioned, if you listen for a while it's generally pretty easy to figure out the more frequently used codes just by the context in which they're used.

Do you suppose they're under the illusion that radio codes are a SECRET?? I'd be greatly tempted, when I found (or assembled) a list of their codes, to go back to the folks that refused to give em to you and hand them a printed copy.

LAPD has their radio codes and terminology right on their website at http://www.lapdonline.org/dept_manual/vol_4/v_4_100_1.htm#120.30 - there's other communications-related stuff above that point on the page.

Yeah, don't waste your time. Unless you're expecting your coaxial
cable run to be so long that you will have at least as much loss as
the amplifier is making up, it's not going to be worth doing.

Also Ramsey kits don't have a particularly stellar reputation for
working as advertised.

There is a company selling a battery adapter to replace your BP120/180 rechargeable packs with a 9volt battery. It will run 4-6 hours per alkaline 9volt. It includes the correct plugs and the voltage regulator for $12.00. It is sold as a battery "back-up adapter". Their phone number is 800-722-3326

4419. tk545 v1.4, multi-platform, open source software for JRC NRD-545

Newsgroup: rec.radio.scanner
Date: 2002-10-29 20:58:28 UTC
From: "Bob Parnass, AJ9S" <usenet1@parnass.org>
Message-ID: <3dbef66d$0$17642$272ea4a1@news.execpc.com>
Source record: 42061
Cross-posted to: rec.radio.shortwave,rec.radio.scanner,alt.radio.scanner

Version 1.4 of tk545 is now available at:

http://parnass.com

tk545 is multi-platform, open source software designed to control
and configure the Japan Radio Co. NRD-545 receiver.

I wrote tk545 chiefly for radio hobbyists who use Linux, MacOS X,
BSD, Solaris, Unix, or other non-Windows operating systems.
However, tk545 runs on Windows-based systems (95 and later), too.

This is a partial list of new features in Version 1.4:

1) New commands sort memory channels by frequency or by label,
in any 100-channel bank or in all 100-channel banks. Users can
save the sorted memory channel list to a CSV file.

2) Duplicate frequency check.

3) When importing channels from a CSV file, values for selectivity
and AGC are now optional and defaults will be used if no values are
specified.

4) New messages diagnose erroneous lines in a CSV file.

5) A new command under the Data menu clears all memory channels.
This is useful before opening a memory channel CSV file if you
want to override the current channels instead of merging the
channels in the file with the current channels.

I don't warrant the software, but it won't cost you anything.

4425. Using Regency 10.7 IF Scanner Crystals Instead Of Bearcat 10.8 IF Crystals

Newsgroup: rec.radio.scanner
Date: 2002-10-29 22:27:20 UTC
From: "Buford T. Justice" <BTJustice@gmx.net.no.spam>
Message-ID: <cXDv9.3$CR7c.2359454@news2.randori.com>
Source record: 42065

I wonder if it would make sense to use Regency crystals in my Bearcat scanners as there are way more of them. Is that as reliable as the actual Bearcat crystals? Now these are the frequencies I want to monitor with my Bearcat III / IV...

155.415
153.980
157.450
155.340
155.055
39.500
162.400
159.210
453.250

Now if I want to get these frequencies through the use of Regency crystals, I would need (if I am doing my math correctly)...

155.315
153.880
157.350
154.955
39.400
162.300
159.110
453.150

Does that sound correct? If so, might anyone have any of those in Regency crystals they would want to get rid of?

Sincerely,
BTJustice

I'd rather build a good passive antenna. If you're going to be using it for scanner listening (VHF & UHF), the size won't be a problem. Even if you live in an apartment, you can build a decent scanner antenna. One that I've designed that works well is the double bowtie bicone antenna that can be built out of stiff wire and a broom handle.

The more I fool with it, (that's what I call it), the more I like it, mostly because of the text display. If I wasn't already over budget, I'd get 2 of them. :)

It is a known fact that some media outlets gave out the description two hours ahead of the media conference that Chief Moose used to actually give it out. How did they get the info, accurate and everything two hours before the news conference?

howdy all

does anybody know where I can find the backlight mod
for the realistic 2004,5,and 6?

the mod entails the backlight being turned off untill a signal is received.

Thanks
Steve

No. Dual analog trunking Motorola, and EDACS. It's a PRO93 with 1000 channels instead of 300.

>Anyone have a diagram for a pro-95 to PC interface?
>How about program tips, software links etc?

The cable is the same as that for the 92/2067/93/2053.

Nobody has a schematic of the actual GRE cable, but a mumber of
functionally equivalent designs are available.

Go to http://www.pro-92.com/pcifcable.htm for a rundown.

Hmmm... I can't bring the site up. Go to

http://www.ulster.net/~petrow/

for a rundown of the best of them. The simplified op-amp design has
been tested and show to work with the 95.

For software, use Win95:

http://www.starrsoft.com/freeware/Win95/

>I'm looking for users opinion on pro-95 sites

http://groups.yahoo.com/group/PRO-93_95/

is pretty active. A lot of seasoned folks hang out there. Good file
and links pages.

A lot of PRO-93 information is directly applicable to the PRO-95, and
Win95 will convert p93 files to p95.

I used to do that... when it would work. Sometimes using UHF crystals in VHF slots (or vice versa) will come out to a "real" frequency. Sobtract the 10.7 or 10.8 (or 10.85) , then multiply x 3; then add back the 10.7 or whatever.

F'r instance railroad freq 160.65 - 10.7 = 149.95; x3 = 449.85; + 10.7 = 460.55

harry

You can play with that for hours... or make a little app to do it for you in Excel or something

Group,

My objective is to use a computer for spectrum analysis in the V/UHF ranges.

I've read various pro/con articles about Winradio, PCR1000, and control of good scanners via computer.

Given my objective (i.e. no HF with this radio) is a good scanner controlled by computer program a better choice than say a Winradio or PCR1000?

What is a good scanner to build around, and what software?

I'm starting from scratch, so recommend what you think will work as a spectrum scope.

Thanks

If interested in a Uniden 700A scanner, please contact me.

http://www.mods.dk/pictureselect.php3?radio=uniden&model=bc-700a

VFO Control Knob, 50 Channels BC 700A

Includes 800 MHz & Aircraft
12 Band Coverage
Band Search
One Touch Weather
Fire & Emergency Scan
Local Police Scan Click on Image to enlarge
Channel Lockout
Full-Frequency LCD Display
Preprogrammed Service Search

29.0 mhz to 956 mhz

This is a great scanner for local police, fire, aircraft and weather. I have owned several 800/900Mhz scanners and this was one of my favorites. I have the full instruction manual, chasis mounting kit to put this scanner in a vehicle or boat (legal with proper certification/licensing), the retractable antenna and 12V wiring as well as the AC adapter.

I can also throw in some BNC connectors and an anetenna adapter depending on your application.

$200 CDN$ (will split shipping or deliver locally in the GTA) -- serious offers only.

Thanks!

Andrew.

Remove your 10.8 MHz IF crystal, find an old Regency or Radio Shack scanner, remove the 10.7 IF crystal and install it in your Bearcat. Then use the Regency Crystals marked with the proper frequency. Yes, it will work, have done it many times.

Hey, Ray. If you've been coding in the channels in the 800-900 Mhz
ranges, yes, they're trunked and can't be followed by an older scanner
(note that you CAN hear them, but the conversations are a bit mixed up.
google "trunk tracking" for information on how this new system works)

SCPD does rebroadcast on some other channels. Happily, I happen to have
my 245 charging next to me at the desk, and bank 1 has the old
frequencies:

scpd rebroadcast:

155.415
154.845
155.850
155.910
155.985
155.580
156.030
152.000
155.655
155.685
158.790
158.910
158.850
158.895
158.745
156.090
158.730
159.150
159.210

SC fire dispatch, etc.

45.880
45.300
45.340
46.300
46.340
46.360
46.380
46.400
46.420
46.440
46.460
46.480
46.500

... and others, which can be found in the appropriate section of the
Radio Shack Freq book (make sure you get the correct region for us!)

You won't get all of the action, nor will it be entirely understandable,
but I listened to these for some time and heard interesting stuff.

No, I'm not sure why I programmed 'em in this order, why there are
skipped channels nor which of these are actually active. Check the
book. The appendices are worth the price, since the freq information
changes.

I have been DESPERATELY looking for 10.8 IF crystals for my Bearcat III scanner. I need the following listening frequencies...

155.415
153.980
157.450
155.340
155.055
39.500
162.400
159.210
453.250

I suppose 10.7 IF crystals would work in it if I used...

155.315
153.880
157.350
155.240
154.955
39.600
162.300
159.110
453.150

I would either like to trade 1 for 1 with crystals I have now that I cannot use in my area or buy cheaply.

Sincerely,
BTJustice

I recently acquired an ar-2002 scanner without a manual. I would sure
appreciate knowing the key sequence to:

1. Set the clock
2. Enter a freq and mode in a memory.
3. Enter a scan range

TIA!

I have a new (less than six months old) Radio Shack Pro-2053 Trunk-Tracker. I have recently moved near an Air Force Base and wish to monitor more of the Military Air Traffic around here. I understand the Radio Shack Pro-2052 does cover the MILCOM band. I was wondering if anyone might be interested in a swap.

My Pro-2053 is 10/10 and comes with original manual and original box.

Thanks in advance.

Yep, that's right. The BC250D handheld has been given a new FCC ID
Number -
presumably someone decided that its specs were significantly different
from the
785D (I hate to say it but I told ya so).

Wonder if this will add another delay to shipment of the units already
in the
pipeline?

Updated info at http://www.snowcrest.net/marnells/digital-scanner.htm

Thanks to "Shaun in Southern California" for the heads-up on this!

have to join that group to access the message archives)

From: "Will" <ve5wil@s...>
Date: Sat Oct 26, 2002 4:58 am
Subject: New Uniden scanner & Canada

Hi all,

this posting is more for my fellow Canadians. I have asked Industry
Canada about the new scanner and this is what I was told:

1. The scanner itself may be allowed for sale in Canada the card
WILL NOT be for sale here.
2. Possession of the scanner and card WILL be ILLEGAL for the time
being
3. A LICENSE WILL be required to own the scanner
this will encompass all EMS type personnel and Media ONLY
NO license for the general public will be issued
4. Amateur radio operators DO NOT qualify for the License.

In short Lagally we will not be able to have the new scanner and
card with out the possibility of a jail term. This may change in
the future but at the moment , according to the Radio communications
Act and Interception of digital Communications, we will not be able
to monitor the locals yet. :(

On a side note- the gentleman i talked with says - if we can buy the
scanner here, and get the card across the border , what they
(industry Canada) dont know wont hurt us. Of course he cautioned
the law redarging the new scanner is still under review, until a
definate settlement is reached , they will follow the existing laws.

Hope this may help some of my fellow scanner listeners.

William Stevens

try the BOSTON CENTER frequencies for your area
128.05, 132.30, 118.55, 133.1, 124.85 also UHF 321.30, 269.60 (AM modulation on all) of course, you can monitor LOgan departure and get he frequencies for the center that way too Center is usually busy during the morning and evening hours and there is some traffic in the overnight hours.

right now, my scanner has Alberquerque center frequencies there is some activity late at night but not asmuch as during morning, evening or daylight hours.... there are high and low altitude sectors for each area.
when I drive through the desert at night, I usually can get trafficfrom Alberquerque or Los Angeles center on the scanner as well as the railroads if nothing else.

I recently got my hands on Radio Shack's latest circular and I saw their newest 1000-channel portable scanner, the circular didn't say the scanner's model # though. This scanner has an alpha-numeric display which of course means you'll be able to name your channels and banks on this thing. Does anybody else know about this new scanner? Except for having the alpha-numeric display capabilities, is it any better than the Pro 94?

It is the Pro-95 Scanner. It is the same scanner as the Pro-93 and
Pro-2053,
but it has 1000 channels and it trunk tracks 400 MHz systems.

Doesn't the 2053/93 track 400 mhz systems? It works with the local 500
mhz system, so I assumed it would work with 400 mhz as well...

This is gonna be a hard one if you want to do it yourself.

It is really not diffilcult if indeed you have a constant carrier
on a known frequency. Otherwise you are going to have to
use some frequency generator. If you can get some sort of
known frequency that generates a fairly constant carrier then
you can find your frequency adjustment potentiameter and turn
it until your frequency readout is accurate to the known frequency
that is generating the carrier.

The hard part is going to be identifying the pot, and finding a
known frequency with a carrier generated on it.

For packet radio all you need is a program that will decode the
packet signals with a sound card.
http://www.elcom.gr/sv2agw/
to good user interface for APRS is winAPRS.
there is not that much RTTY or SSTV on VHF and higher. Usually FSTV
is on 420 MHz and above. But all you need to decode these signals is
to find the proper software. Some Fast Scan TV can be seen on your TV
in Cable mode with an external antenna. You would have to find a local
group using FSTV and tune in when they are sending pictures. For SSTV
below 30 MHz you will need a SSB capable rig and the appropriate software.

4480. HAM Radio Earthquake Audio

A while back I came across an audio file that contained conversations bt Amateur Radio operators just after one of the major quakes in California.

One operator took control of the frequency and accepted messages/directed amateurs to investigate and report on things like the status of dams etc.

Does anyone still have it?

>What is a good scanner to build around, and what software?

I have both PCR1000 and WR-1550e. WR-1550e is slightly more expensive
but IMHO gives you much more, with plenty of excellent free software.
Also has a wider frequency range.

>I'm starting from scratch, so recommend what you think will work as a
>spectrum scope.

PCR1000 does not have a wide band spectrum scope as standard. WR-1550
has one, plus there are at least 2-3 different spectrum scope plugins
which you can download for free.

I'd suggest to have a look at http://xrs.winradio.com,
http://www.rbasic.com etc. There is also Linux and Mac support for
this radio. You can also download Winradio software from
http://www.winradio.com/home/download.htm .

Hope this helps
Ian

There's no RTTY and I doubt if there's any SSTV on
VHF now.

About all you can decode on these frequencies is POCSAG
(pagers) and possibly trunked systems. I can't think of
any other decodeable data modes on VHF.

HF though, is another matter.

> or simalar?
>

It has more gain than my discone (no real surprise there) and is fairly broadbanded enough to cover the entire VHF spectrum from around 80 MHZ on up to at least 175 MHZ. I don't have a UHF antenna analyzer so can't measure the VSWR, but it does seem to perform well on up into the UHF spectrum. I have no problem hearing FRS radios around my neighborhood with good signals. UHF transmissions from 30-40 miles away come in very strong with the antenna up 20 feet. 800 MHZ doesn't come in as well, but I believe it's due to my coax and use of an SO-239 connector instead of a BNC on the antenna.

This is a purely unscientific study, but if it works, it works.

Just read the same sad news on the official announcement - 3600 baud only.
WHAT A BUMMER!!!!!!!!!

But - all is not lost. C'mon, we all know what needs to be done - there's an open source project we all know and love called Trunker, right? The new scanners are PC programmable right?

Well gee Mr. Wizard - there's an answer to be had somewhere in there.... tap a discriminator here, change come C code there... There's enough knowledgable scanner heads out there to get it to work.

Hell, if you can figure it out, slap a patent on it and sell it to Uniden!
:-)

Many consider this to be the best scanner ever. This unit is in like new condition. There are no marks or blemishes on the radio. Since it has not been used all that much, the backlit display is very bright and readable. The year of manufacture is 8A1 which means August 1991. This is the wide band scanning receiver you are looking for! Major Pro2006 features:

* 400 Channels.
* Wide band receiving range (you can find what it is capable of elsewhere).
* AM / FM / WFM receiving modes.
* Hyperscan.
* Internal whip antenna, BNC connector for external antenna.
* Internal power supply. May be powered by an external 12 VDC source (for car/boat/plane/etc.).

Included in the package:

* PRO 2006 Receiver, sn 044539
* Internal whip antenna.
* Original shipping box and user manual.
* Bonus: Service manual.

Price $300 (Includes insured shipping to lower 48 included).

Check or money order only, but I will ship the package only after the check has cleared. Shipped via USPS Priority Mail. Extra shipping costs likely to outside of lower 48 states.

Please e-mail me with any questions. I'll send a photo if desired.

KE8WO

A filter like you describe should help a lot with intermod on your receiver. A filter of this type is normally called a bandpass filter; ie: it passes a certain band of frequencies and attenuates all others. A notch filter, on the other hand, is normally used to attenuate (notch out) a particular unwanted frequency. For example, in a ham repeater the transmit frequency is notched and the receive frequency has a passband filter on it. In this case, both the notch filter and the bandpass filter have the same goal; to keep the strong transmit signal from interfering with the much weaker receive signal. If you are listening to a transmitter in a known location or in one general direction, then a directional antenna can also go a long way in reducing intermod.

If you build a filter to pass frequencies from 225 to 400 MHZ (bandpass filter) it should stop the intermod.

You may get by with a high-pass filter used for TV sets. It just depends on what frequencies you're getting the intermod from. I have a scanner that I was getting intermod from shortwave stations that mixed with a local NOAA weather station. I bought a high-pass filter and installed it internally. The problem was solved.

Yes. The original 2006 had a "Dimmer" switch on the front panel, the
second verion had a "Light" switch on the panel. The older radio dimmed,
the newer one the light turned on or off.

Other wise there is no difference that I could find. I have 2 of the
older model and one of the newer one (along with a 2005 and a couple
2004's).

Sounds like an Instrument clearance.

Normally they will give a SID (standard instrument departure) number. This is a prepublished procedure.

Then a routing that will include which airways to fly to get to the destination. High altitude routes are preceded with J such as j-38, and low with V(victor 5).

Next they will give an altitude in either feet or flight levels. "Climb and maintain 5000, expect 8000 10 minutes after departure: or "Clime and maintain 5000, expect flight level 350 (35000 feet) 10 minutes after departure. All altitudes above 18,000 feet are given in flight levels.

next is the transponder code, a four digit base 8 code to enter into a transponder to identify that aircraft on radar.

Then any heading to fly initially.

If you are listening to an aircraft enroute three digit headings are used and altitudes as above with the words climb, descend, or maintain as modifiers. Also included will be an altimeter setting in either inches of mercury i.e. 29.92 or millibars "1000 milibars" depending where you are in the world. This is further modified in some countries with QFE or QNE altitude above field or sea level.

Don't worry about being confused, It takes a while to get the lingo down. I would suggest a call to your local major airport and see if you can visit the air traffic facility. I don't know if it is still possible post 9/11, but you used to be able to visit and see what goes on. Most of the air traffic folks are pretty terrific at explaining the whole deal.

Good luck
Fred

I have an AR-2002 25-550 and 800-1200 Mh scanner with no gaps. I am interested in a hand held that covers at least 25-550 continious (must receive 72mhz and military air band). I don't care if cell phone is blocked.

What say people? Any one care to trade.

The last version of ScanPro I had, just nothing but trash... The program was so buggy, that it was unusable...

I had purchased it from the company off of an eBay auction. They were offering the ScanPro software and the cable for $17 plus shipping.. Both were pretty much useless... Granted the cable worked OK (not great), but it was a measly 3-feet long... was barely long enough to reach from the back of the computer to the top of the computer desk... Now, I like my computer, but having to have it sitting right above the computer, was pretty useless... The computer emits a LOT of interference... I couldn't even put in on one of the uppers shelves, further away from the computer, as the cable was just too short...

My personal opinion... Don't waste your money... If you really want a copy, I'll sell you my copy for $5. I don't use it, so there's no point in me keeping it...

Otherwise, try to find a copy of PC895 Version 2. I'm having a hard time locating it online, but maybe you can? It's a free program... It too has it's problems, but they don't show their ugly heads quite as often as they did in ScanPro... If it comes down to it, I can post a copy of it to alt.binaries.radio-scanner for you... Hopefully you know how to retrieve binary posts from UseNET...

It's a Bearcat/Uniden 300 channel about a year old.

I have city programmed in bank 1 (26 channels)
and County programmed in bank 2 (28 channels) out of 30.

I almost always listen to City with only bank one active because
I work in the city. It has worked fine for a full year.

All of a sudden (yesterday) bank one just shows the dashes (meaning
no activity) all night. However if I go to manual mode and scan
there is lots of activity, it just doesn't stay with the ID tag
(like the old non trunked scanners do on trunk systems.
Sometimes if I switch back to trunk mode from manual mode
it will say it's searching for ID tags but it never finds any.
Only once did it find all the ID tags and show the respective channels
and work for about an hour. Then it just went back to dashes again!

It's not a reception problem because I can go to bank two trunked
and listen to County fine or go to manual mode and hear city un trunked.

I really need to resolve this ASAP because I use it at my night job!

Any ideas????

Thanks for much, I hate to think it's toast already I paid quite a bit,
although they are cheaper now.

Good day all

Do many of u know about the radioshack pro-63 100 channel radio
scanner..
i have had mine since 1998..
and well we have saudered the antenna part inside it many times. i
dont wana pay radio shack to look at it cause then they will just send
it away for a month and then send it back adn have to pay like 50
bucks. so anyways when i hold the rubber ducky up straight like its
fine

but when it is slanted a bit it has no signal
i was wondering if any of u know if it is the antenna or what it is.
please let me know

thanks alot
Dan

sounds like you have the scanner in search mode , try hitting the manual button
and then the trunk button to get it out of search mode .
or you couldve changed the trunk mode , then you have to reset the mode depends
on the scanner , on a uniden you just press and hold the trunk button down and
then sellect the trunk system eg. 800 .

Zandorph -

I emailed Gene Hughes, he says the Southern Calif Detail Edition will be out by the end of November. Ham Radio Outlets < www.hamradio.com > in So calif, and other electronics dealers will carry it. As usual, Radio Shack will NOT be carrying that edition.

Also, last year the Southern California Monitoring Association sold it online to members and others.. their homepage is http://www.socalscanner.com/ and their email list is at http://groups.yahoo.com/group/SCMA/

> the headset jack is?

Hi,

Make a jumper between the metallic outside (ground) of the earphone plug and
the outside of the antenna connector (ground also). This bypass the attenuating
resistor that serves for limiting the audio level of an earphone. If you don't
want to make a permanent mod., you can use a paper clip to temporarily make
the "jump" between the two connectors.

Good luck!

- Sylvain.

Tike,

Even though yours was a loaded question, Rollo certainly did not answer it correctly.

The correct answer is: Yes, the general test contains all the necessary testing to operate within the same bands that an Extra does. Since this is all your asked, it's all I'll answer.

Regards,

Casey KF6OQ

(Sorry to repeat this one, cant find my other posting due to computer crash)

Cant get radio to power up, Battery is good (tried on another bearcat with same pack). Also will not turn on via wall wart (power supply) I check the board and dont look like and bad connections, tried another battery pack and no go either. I was wondering if anyone would know of a possible cause?

You are describing a bandpass filter. However, the bandwidth is too broad for a classic BP filter. A better topology would be a cascaded HPF (200 MHz 3dB point)and an LPF (420 MHz 3dB point). Compomemt spread will be much more realizable.

4531. FS>>PRO-2005 w/laptop & Probe

Newsgroup: rec.radio.scanner
Date: 2002-11-03 12:38:34 UTC
From: John Schneider <thecop@optonline.net>
Message-ID: <aq35eu$bl4$1@bob.news.rcn.net>
Source record: 41971

This sale was posted some time ago, but the deal fell through. I am posting to the N.G.'s prior to listing on Ebay.

I have for sale a Radio Shack PRO-2005 scanner with the computer control board (Opto Lite 456) installed. This radio also has the discriminator mod. done and an RCA jack has been installed on the rear panel for easy hook-up.

The radio, in my opinion, is a 8.5 out of 10. There are very few normal wear marks on the case and the display is very good considering the age of the radio.

The chrome coloring on the volume and squelch knobs appears a bit worn. The internal power supply has been removed to facilitate room for the Opto board. As a result, a Radio Shack wall wart is included. There is a bit of "play" in the external radio power supply jack, so that it must be moved so as not to make the radio cut out. Once moved, the radio stays powered. With the radio hooked up to the laptop, it becomes a "black-box" scanner and there is no display anyway. This is the only problem with this setup.

The laptop is a Sharp 486 (on boot-up a 586 chip is displayed, but the system info. indicates 486, so that's how I'll advertise the rig) with 500 meg.'s of memory and 16 meg.'s of RAM. It has a nice crisp color display and is running Windows 95. In addition Probe v. 6.0 is installed (Probe running this scanner makes the scanning speed nothing short of amazing, even by today's standards). The pc battery will not hold a charge, but the included power supply works great (batteries for this computer are still readily available from various vendors).

I do not have any of the original documentation with the exception of the Opto board installation instructions. Nor do I have any of the original boxes. The included telescopic whip works great, but again, is not original.

I apologize for such a long post, but I would much prefer the buyer NOT be surprised nor not know what he is purchasing.

The asking price of the radio and laptop is $350.00 + $20.00 shipping. I will accept personal checks or postal money orders. If you wish to pay via PayPal, I must charge an additional $10 to cover their fee.

Pictures are available upon request. Please e-mail direct if you have any questions or need any additional information.

Thanks for your time.

John Schneider

I think there were two generations of PRO-2026s
and the early version did not have a memory backup.

See the entry at http://www.mods.dk
for a modification to add a memory backup
to early PRO-2026 radios without a backup facility.

You have have a shall I say "challenging" situation!

One solution the might be the "Bill Cheek" antenna that is mentioned on the newsgroups every once in a while. It is an unbalanced dipole 48 inches on one side and 18 on the other. It is fed through a balun. It is very cheap and easy to make, requiring only two pieces of wire and a TV balun. You could hang it behind curtains at a window. There was a discussion about 6 months ago here or at a.r.s. Do a search and you'll find it.

Try someplace outside the USA. As far as something that would not be out of date... That will depend on who you are listening to. For some communications there was never a scanner released that will work, and even the new Uniden Digitals (that aren't available yet) are still behind the cutting edge digital systems and don't help you if the communications are encypted.

Right now the best bang for the buck in Duel Trunk tracking would be the Pro95 if Radio Shack still has them on sale. However you don't get full 800MHz.

I need the following frequencies for my Electra Bearcat III scanner...

155.415
153.980
157.450
155.340
155.055
39.500
159.210
453.250

Let me know if you have more than 1 of the above frequencies as I am putting together another Bearcat III for a friend of mine.

Now I have 4 crystals I do not need. If you guys want to work out a deal on them, that is fine with me. Like trading 1 for 1 or something. I need to keep this cheap. The frequencies for the 4 I don't need are...

47.69666
48.150
460.100
460.300
I should be getting more crystals from scanners I won I eBay and I will post them here in this thread.

Thanks,
BTJustice

off topic for a min... does anyone know how to delete read messages? my mailbox is getting full.I just received a messgae from my ISP.

Thank you.

4550. PRO-2006 For Sale

Newsgroup: rec.radio.scanner
Date: 2002-11-03 18:41:46 UTC
From: "William H. Bowen" <bill_bowen@attbi.com>
Message-ID: <LVqdnaoYmfhR8FigXTWQlg@News.GigaNews.Com>
Source record: 41989

Greetings,

I have a Radio Shack PRO-2006 (the later "A" version) for sale. The unit is in A+ condition, has a bright backlight, includes antenna, original Owner's Manual and Service Manual.

I'm asking $250.00, but REASONABLE offers will be considered.

Please email me at bill_bowen@attbi.com if you are interested. I'm located in Sacramento, CA but can ship the scanner anywhere within the US (I'd sooner not get involved with a non-US sale and all the assorted problems with Customs and duties).

Regards,
Bill Bowen
bill_bowen@attbi.com
Sacramento, CA

4551. Pro-39 F/S Full Cell coverage

Newsgroup: rec.radio.scanner

I have an AOR 1000 handheld scanner for sale. Excellent electrical condition, average cosmetic condition. Includes manual, the AOR multi-band "rubber duck", a set of 1600MAH NiMH batteries and an AC Adaptor/charger.

I'm asking $200 for the package, but other reasonable offers will be considered. I'm located in Sacramento, CA but can ship the radio anywhere within the USA.

If you are interested, please contact me at bill_bowen@attbi.com.

Regards,
Bill Bowen

This scanner is worth at least $350. Why are you asking such a low price?

Jim,

I'll be bluntly honest with you - I am in DIRE need of cash. The
hi-tech downturn has put me in a bad financial situation, and right
now the $$ are more useful to me than the scanner, otherwise I would
not offer it at the price I'm offering it at. The scanner, as I said,
is in A+ shape.

Are you talking about the entire face of the radio or just the 'lens' in front of the readout?

As to parts, perhaps G & G Communications, which really is a repair place, I believe in upstate NY, may be able to sell you a part or even a whole dead radio with a good face...

http://www.iinc.com/ggcomm/index.html

and I've seen posts back & forth here several times about using different polishes and such to remove scratches from the readout lens, if that's what your problem is.

I don't recall the products referred to at this time, but maybe I can find some references to them if I check around.

Does anyone know of any simple freeware or software that will let you use a computer controlled scanner like a band scope or spectrum analyzer?

Just looking for something that will let you enter a search range and it will keep searching, updating a display of active frequencies. Maybe set the step rate also?

I am using a Optoelectronics board in my scanner.

Thanks

I think I may have a solution if you're handy at building things. It's called the coax dipole.

All you need is a length of coax with a BNC connector on one end. At the other end, you'll want to strip the plastic cover off the coax. The length of cover you'll want to remove depends on how long you want to make the antenna. For VHF high band, you'll want to remove about 18 inches. Take the shield braid and open it up next to where the plastic cover is still connected. Pull the center conductor through. You will then have a dipole, with the shield braid making up one leg, and the center conductor making up the other. Connect a couple of suction cups to each end and stick it vertically on a window. When you're done listening, you can remove it and make your wife happy.

Amateur Radio Newsline™ Report 1316 – November 1, 2002

Amateur Radio Newsline report number 1316 with a release date of Friday, November 1st, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

A child is saved thanks to C-B radio in Australia and Ireland opts to restructure with slow-code. These stories are first on Amateur Radio Newsline report number 1316 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: CB HELPS SAVE HAM RADIO OPERATORS DAUGHTER’S LIFE

The daughter of a ham radio operator is alive after he to turns to C-B radio for help. It happened down-under in Australia as we hear from Q-News Graham Kemp, V-K-4-B-B:

--
Recently on holiday at Finley, S. NSW, Eric VK2TRD's daughter Tegan, 12, had a very narrow escape, after she was bitten twice by a Tiger Snake! After emergency treatment at Finley Hospital she was transferred by Ambulance to Shepparton, Vic.

Travelling to Shepparton Eric called five times on the 2m repeater seeking guidance to the Hospital, no response. Disgusted, he called on the UHF CB repeater and got instant help.

Over 6 days there, nothing was heard on the repeater but the ident., and that was when Eric fired it up. On 2m simplex, only 2 farmers using it as an intercom, no c/s's.

Tegan, that night suffered cardiac respiratory arrest and was in intensive care for two days. Now at home she is doing OK. A traumatic time for all.

For the Amateur Radio Nrewsline, I’M graham Kemp, VK4BB of Q-News Australia.
--

Once the ordeal was over, VK2TRD paused to thank all who helped in his daughters rescue. This included the Shepparton CB’ers for their immediate response.

**

RESTRUCTURING: IARU REGION I MEETS NOV 10

The International Amateur Radio Union Region 1 Conference is slated for the tiny nation of San Marino beginning on November 10th. And according to the W5YI Report's Fred Maia, it could be a rather hot meeting. The reason -- two words: Morse code.

Writing in the November 1st issue of his newsletter, Maia says that the subject of Morse proficiency testing among those serving on the High Frequency Committee is shaping up to be controversial. On one side are two giants. Germany's Deutscher Amateur Radio Club and the Union of Russian Radio Amateurs are two national societies who are already on record as opposing dropping Morse testing as an international requirement.

Leading the charge to eliminate manual telegraphy tests is the Radio Society of Great Britain. It says that Region 1 if the International Amateur Radio Union should formally endorse the October 2001 resolution of the IARU Administrative Council in respect to abolishing mandatory Morse exams.

Both the Deutscher Amateur Radio Club and the RSGB have submitted well crafted conference documents stating their respective positions. How this will all work out will be known at the close of the conference on November 15th.

**

RESTRUCTURING: IRELAND ADOPTS 5 WPM

Meantime, restructuring and slow code have come to Ireland. Amateur Radio Newsline's Henry Feinberg, K2SSQ, has the details:

--
According to Echo Ireland, that's the journal of the Irish Radio Transmitters Society, a set of new amateur radio regulations were signed into law by the Regulator in the Republic of Ireland on September 11th. The newws is just getting out and the main points of the new regulations governing ham radio are as follows.

First, the Morse code test speed has been reduced to 5 words per minute to bring it in line with whats become the defacto world wide standard. More important, that there is no longer any age restriction on a persoin getting an Irish ham radio license. This means that anyone -- any age in Ireland can brccome a ham. And up until now, there had been a probationary period of a year before a Full Licence could be issued. Now, thats gone too.

On the technical side, the maximum power permitted on each band is now listed in decibles per watt R-M-S at the output of the transmitter. This is good news because it effectively allows a power increase for Irish amateurs. The old regulations specified that limits were regarded as input power rather than measured at the R-F output jack.

For the Amateur Radio Newsline, I'm Henry Feinberg, K2SSQ.
--

We will have more news from around the world later on in this weeks Amateur Radio Newsline report.

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the Amador County Amateur Radio Club Net serving Pine Grove California.

(5 sec pause here)

**

ENFORCEMENT: YOU CANT USE THOSE RADIOS ON FIRE CHANNELS

Back on this side of the Atlantic, the FCC has told a fire department to stop using illegally modified ham radio gear. The FCC's Daryl Duckworth, NN0W, explains:

--
Duckworth: "The Enforcement Bureau has notified the Bon Secour Fire and Rescue Department in Alabama that the Amateur equipment they were using was contrary to Commission rules because it had been modified to operate on Public Safety frequencies. The letter referred to several Icom IC-V8 handie talkies."
--

The note went to Karl Bingert who is the Chief Bon Secour Fire & Rescue Department. It told him that the use of Amateur Radio units of any kind, modified to operate on its frequencies, is against the Commission's rules and would result in enforcement action by the FCC. (FCC, RAIN)

**

ENFORCEMENT: FCC BACKS REPEATER OWNERS BAN OF UNWANTED USER

The FCC is once again backing up a repeater operator who wants to ban a particular user from the system. Its all taking place in Ohio. Again, the FCC's Daryl Duckworth tells us about the situation and the agency's position in favor of the people running the machine:

--
Duckworth: "The Enforcement Bureau sent a Warning Notice to Billy R. Marshall, N8ORF, warning him to stay off of the W8HFF repeater system in the Toledo Ohio area. The Toledo Mobile Radio Association had issued two letters to Marshall requesting him to stay off the repeater due to his failure to follow operational rules.

The Enforcement Bureau reminded Marshall that control operators may take whatever steps are necessary to insure complience with the rules and that they will be backed up by the Commission"
--

Marshall was given 20 days from the date of receipt of the FCC letter to reply and outline what steps he has taken to comply. (FCC, RAIN)

**

ENFORCEMENT: PHONE COMPANIES FINED

Two companies have learned the expensive way that it does not pay to try to grab another telephone company’s customers. This, as the FCC issues two Notices of Apparent Liability proposing a total of $6,560,000 in fines against two operator service providers for taking advantage of consumers.

The companies named are Opticom Corporation and ASC. The FCC says that the massive fines are based on Opticom apparent sixty-four violations, and another eighteen apparent by ASC. The term apparent is the FCC’s way of alleging a violation has taken place. The Commission says that it calculated the proposed fines by using the $80,000 per violation amount previously used in cases involving egregious slamming. Take your browser over to http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-226534A1.doc to learn more. (FCC)

**

RESCUE RADIO: EMCOM SUSPENDS NATIONAL EMERGENCY ALERT NOTIFICATION SYSTEM

EMCOM -- the emergency alerting system has suspended its the National Emergency Alert Notification System operations effective October 25th. Our producer, Bill Pasternak, WA6ITF, has the nitty-gritty:

--
In making the announcement, EMCOM officials said that what they term as a stand-down also affects the Emergency Information Web Sites maintained by EMCOM for every state, county and municipality in the nation. Also impacted are over 1 million other web pages that reportedly utilized the automatically updated EMCOM Homeland Security Status Bar or the PubAlert notification bulletin pop-up system.

By way of background, for the first six months after the 9/11 tragedy, EMCOM offered to provide access to full use of the system to any community's emergency agencies for $500 per month. During that period there were no takers, even though EMCOM had notified almost every senator, representative, and agency in the nations capital.

So the bottom line is this: The EMCOM alert system is dead for now but hopefully not gone forever.

For the Amateur Radio Newsline, I’m Bill Pasternak, WA6ITF.
--

In making the announcement, EMCOM took the opportunity to express its gratitude to the hams, ARES and RACES operators who helped to get the system off the ground.

More about EMCOM is on the web at www.comdinet.com/emcom (EMCOM release)

**

RESCUE RADIO: SKYWARN RECOGNITION DAY

On a more positive note, Larry Boyd, KB4GFT says in an Internet posting that The 2002 SKYWARN Recognition Day will occur on Saturday December 7th. It will begin at 00:00 UTC and run for 24 hours.

SKYWARN Recognition Day was created in 1999 by the National Weather Service and the American Radio Relay League. It honors the contributions that volunteer SKYWARN radio operators make to the National Weather Service.

Last year 80 National Weather Service offices participated. The list of this years participants and other information is on the web at hamradio.noaa.gov (KB4GFT)

**

RADIO RULES: RULES REWRITE ON MEDIA CONSOLIDATION

The Federal Communications Commission has embarked on a major rewrite of rules that limit the consolidation of media companies. The overhaul, which FCC officials first announced in June, is likely to conclude by the middle of next year when the agency issues final rules.

Many observers expect the agency to relax the current media ownership restrictions, although FCC officials stressed during a recent meeting that they had not reached any conclusions. The FCC is seeking comment on whether it should keep or change six specific media consolidation rules, including bans on common ownership of a newspaper and television station or television and radio stations in the same media market, as well as a limit on the percentage of the national audience that any station may reach.

Many of the rules were written decades ago before cable and satellite-based television and the Internet. The proceeding is being conducted under a statute that requires the FCC to periodically review its rules to determine whether they remain in the public interest. (FCC)

**

COMMUNICATIONS LAW: JUDGE THROWS OUT PAY AS YOU CLICK CASE

Its a big court win for all of us. This as a federal court says no to a law suit that could have cost all of us a lot of dollars as we clicked our way across the World Wide Web. Amateur Radio Newsline’s Bruce Tennant, K6PZW, has the details:

--

U.S. District Judge Colleen McMahon has rejected a claim by the B-T Group that it owns the patent on those single-click hyperlinks that make the Web what it is. It’s lawsuit accused Internet service provider Prodigy Communications Corp., of infringing on the B-T patent.

But Judge McMahon rejected the claim that each Web server on the Internet is a central computer and thus the Internet falls within the patent's scope. Her decision, filed in a White Plains, New York Federal Court concluded that no jury could find that Prodigy infringes on the B-T patent.

The B-T suit had been viewed as a test case that could have opened the door for the company to challenge other Internet service providers and demand licensing fees. These fees could have added a lot to the annual cost of anyone surfing the net.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW, in Los Angeles.
--

With the potential of billions of dollars at stake, its not known if B-T Group will appeal the judges decision or re-file the case. (Published news reports)

**

HAM RADIO TRAINING: AMATEUR RADIO LICENSE GUIDE – THE PROGRAM

Stuart Cole, N5LBZed, tells us by e-mail about a computer program that he has just finished writing. Its called "Amateur Radio License Guide" and is a modern update of the DOS version that he brought out back in 1999.

According to Cole, the program is based on the official ham radio question pool, is divided into three sections and does cover training all classes of license. More information is in cybrspace at http://cableone.net/sacole/ (N5LBZ)

**

THE WORLD ABOVE 50 MHZ: WRITER ASKS YOUR HELP

Gene Zimmerman, W3ZZ, says over the VHF Reflector that his next World Above 50 MHz column in QST Magazine will include a discussion of VHF+ clubs and groups. This refers to weak signal groups that meet regularly, VHF groups that sponsor annual conferences like Central States VHF Society, contest groups and others interested in the non-repeater world of VHF and UHF communications.

Gene says that he has already mined a lot of data from Internet sites but I would like his information to be accurate and up to date. He has identified the PackRats; the Rochester VHF Group, the South East V-H-F Society and about a dozen others as falling into this category. He asks that anyone connected with these groups please contact him by e-mail to confirm the information he already has. He also wants a person or point of contact to send readers to if someone wishes to find out more information about how to particular group. Gene’s e-mail is w3zz@arrl.org. (VHF Reflector)

**

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

**

EMERGING TECHNOLOGY: AM MODULATION IMPROVEMENT ANNOUNCED

A new modulation technique for AM broadcasting is being promoted by broadcast industry pioneer Mike Dorrough, KO6NM. Dorrough claims the Advanced Modulation System can increase carrier modulation to 200% while improving the performance, range and sound quality of Amplitude Modulated radio.

According to the CGC Communicator, KO6NM recently discussed the system at an SBE meeting in Sacramento and plans other presentations.

Ross du Clair, WA6VWY is the Chief Engineer for Clear Channel in Sacramento. He attended the Sacramento meeting and is quoted in Radio World On-Line as saying, "This is real and it does work."

As previously reported, Mike Dorrough was the recipient of the National Association of Broadcasters Radio Engineering Achievement Award in 2000. This, for his contributions to audio processing and signal monitoring. Details of the new Advanced Modulation System will appear in an upcoming issue of Radio World magazine. (CGC Communicator)

**

EMERGING TECHNOLOGY: PERSONAL LOCATORS FOR KIDS

In the wake of multiple child abductions, parents are turning to satellite-based locator bracelets to track their children. The bracelets carry transponders that will permit parents keeps tabs on their kids over via the Internet or by telephone.

Wherify Wireless plans to release its three-ounce G-P-S equipped Personal Locators next month. The device uses satellite and cellular technology and has a built-in numeric pager. It allows the wearer to contact an emergency law enforcement service in worst-case scenarios

Each unit costs 400 dollars and is accompanied by about 30 dollars in service fees. Experts on missing children warn such devices are not foolproof and could give parents a false sense of security. Still many parents are willing to try the locators a try. (Scienceonline)

**

RADIO IN SPACE: SOYUZ FLIES AGAIN

Some good news for the astro-ham team on board the International Space Station. The Soyuz rockets are flying again.

On Wednesday October 30th a manned Soyuz rocket with three cosmonauts on board blasted off from Russia's Baikonur cosmodrome bound for I-S-S. The Soyuz-TMA booster rocket lifted as planned at 03:11 GMT with no reported malfunction on its way to orbit.

As reported last week, the launch of this Soyuz was delayed after the fatal crash of a similar design unmanned cargo rocket October 15th. During this Soyuz 12-day mission, the Russian and Belgian crew will replace a rescue capsule docked at the ISS. (Published reports)

**

CONVENTIONS/HAMFESTS/CONFERENCES: MARTLESHAM MICROWAVE IN NOVEMBER

Turning to the ham radio conference scene, work that the Martlesham Microwave Round Table 2002 will be held this year at Adastral Park, Martlesham Heath, England. The dates are Saturday the 9th and Sunday the 10th of November.

Highlights include a visit to the Royal Air Force’s Defense Radar Museum at R-A-F in Neatishead and an evening dinner in Ipswich. All of this plus the usual flea market, lectures and the UK Microwave Group Annual General Meeting. For ore information e-mail g3xdy@btinternet.com (GB2RS)

**

CONVENTIONS/HAMFESTS/CONFERENCES: EUROPEAN RADIO SYMPOSIYUM IN BARCELONA

The 2002 European Radio Symposium is slated for November 13th in Barcelona, Spain. Convergence, digitization and electronic audience measurement will be key topics tackled in this symposium. Speakers include David Rogerson of Strategic Media Solutions. (Media Network)

**

CONVENTIONS/HAMFESTS/CONFERENCES: BIG TURNOUT FOR ARRL/TAPR DCC

According to a recent ARRL Letter over a hundred the worlds most active Amateur Radio digital enthusiasts turned up in Denver, Colorado, September 13th to the 15. This, for the 2002 joint ARRL and TAPR Digital Communications Conference.

This marked the 21st such Digital Communications Conference held. The agenda ranged from Automatic Position Reporting System topics to high-speed digital networking and software-defined radio. All agree it was well worth the trouble of traveling to the mile-high city to attend. (ARRL)

**

DX

In D-X, word that 3D2AG, will be working on Rapa Island through the 28th of November. He plans to operate as FO5RK on CW and SSB. This, during his late afternoon, nighttime and early morning hours. Rapa is part of the Austral Island group. (RSGB)

And SMZ0WKA is in Cuba until the 10th of November and is active as T48W. Look for him on 160 through to 6 meters, with an emphasis on the lower bands. QSL this one as directed on the air. (RSGB)

**

THAT FINAL ITEM: W6XYZ/KTLA AT 60

And finally this week, one of the nations pioneering television stations is in the midst of celebrating its 60th anniversary. That station is KTLA television in Los Angeles. And almost from its inception, ham radio has played a role in its success. Roy Neal, K6DUE, takes a look at KTLA and some of the hams who helped it to make history:

--
DATELINE “HOLLYWOOD.” ON A HIGH AND WINDY HILL, OVERLOOKING THE FAMOUS DISTRICT OF LOS ANGELES, IN GIANT BLOCK LETTERS, THERES A SIGN THAT READS HOLLYWOOD. AT THE TOP OF THE HILL, THERE’S ALSO A RADIO TOWER WITH A HISTORY. THAT’S THE SITE OF THE FIRST TELEVISION STATION WEST OF THE

MISSISSIPPI.

IT WENT ON THE AIR IN SEPTEMBER OF 1942 AS W6XYZ, AN XPERIMENTAL TELEVISION STATION WITH STUDIOS ON THE PARAMOUNT FILM LOT. IN OCTOBER OF 1942. THE STATION EVEN BROADCAST INSIDE A MOTION PICTURE STUDIO, FEATURING THE MOVIE "THIS GUN FOR HIRE."

BY 1946, W6XYZ WAS GONE, REPLACED BY THE CALL KTLA. THE GUIDING GENIUS BEHIND THE STATION WAS KLAUS LANDSBERG, WHO CAME TO THE UNITED STATES AFTER ESCAPING FROM NAZI GERMANY. IN THE LANDSBERG BOOK, NOTHING WAS IMPOSSIBLE. SO KTLA RACKED UP AN IMPRESSIVE LIST OF FIRSTS WHILE PIONEERING TELEVISION.

ON THE FIRST OF JANUARY, 1946, THEY BROADCAST THE TOURNAMENT OF ROSES PARADE…LIVE. IN 1955, KTLA BECAME THE FIRST LOS ANGELES STATION TO BROADCAST THE PARADE IN COLOR.

IN MAY OF 1952, LANDSBERG DROPPED RELAY STATIONS ON MOUNTAIN TOPS TO BEAM AN ATOMIC BOMB TEST FROM NEVADA TO LOS ANGELES. HE CALLED IT OPERATION BIG SHOT.

AND IN MAY OF 1958, BUYING EQUIPMENT FROM NBC, KTLA WENT ON THE AIR WITH ITS TELECOPTER…A HELICOPTER EQUIPPED TO COVER LOS ANGELES FROM THE AIR!

ONE OF THE MOST POPULAR SHOWS LANDSBERG PRODUCED WAS LAWRENCE WELK, A PROGRAM THAT STILL EXISTS IN SYNDICATION.

MANY OF THE STATION'S ENGINEERING STAFF WERE RADIO AMATEURS. FOR EXAMPLE, THE INVENTOR OF THE HAM RADIO REPEATER, THE LATE ART GENTRY, W6MEP. THIS REPORTER REMEMBERS MANY FUN TIMES WHILE TALKING WITH THE AVUNCULAR MR. GENTRY FROM THE REPEATER SITE ONCE OCCUPIED BY W6XYZ.

IN 1964, FILM AND TV STAR GENE AUTRY BOUGHT THE STATION AND AMONG THE ENGINEERS HE BROUGHT IN WAS LOYD SIGMON, W6LQ. "SIG" IS PROBABLY BEST KNOWN AS THE FATHER OF THE SIGALERT TRAFFIC MONITORING AND PUBLIC ADVISORY SYSTEM.

W6LQ AND W6MEP WERE TWO OF THE BETTER KNOWN HAMS WHO HELPED KTLA AS THE STATION PIONEERED EARLY DAY TELEVISION UNDER THE GUIDING AEGIS OF KLAUS LANDSBERG.

FOR THE AMATEUR RADIO NEWSLINE, ROY NEAL, K6DUE
--

KTLA is owned these days by Tribune Broadcasting and is part of the Warner Brothers -- or W-B Television Network. More important, its history is one rich in break-through technology and innovation. Its a pioneering station that made television happen. You can read more about it in cyberspace at the website you will find in this weeks amateur Radio Newsline report.

More on the fascinating history of W6ZYZ and KTLA is in cyberspace at http://ktla.trb.com/about/station/ktla-about-history1.htmlstory (Tnx K6DUE, CGC Communicator, others)

Usual problem somebody reversed to polarity.

Componant at U13 has exploded.

Can anybody point me to a schematic or diagram for this ?

Alternatively can you tell me what the part is. ?

Or I suppose a repairer in the UK might be an option.

As Bob posted, there were two variations, and the early one, like mine, has no provision for holding memory when unplugged. A 9 volt battery is the simple answer.

There are three wires coming off the back of my 2026 - orange is positive and the black is the negative. The third (red) wire is the memory connection, that keeps the memory if the 12 volt power is off. If the radio is disconnected, the programming will be lost unless the red memory wire is connected somehow. What many people (and I) have done is to simply connect a 9 volt battery to the red memory wire (and also to the black ground - splice in a second piece of black wire so that there are two ground wires coming off the radio. One will connect to the ground on the power supply and one to the negative terminal on the battery. The 9 volt is enough to keep the memory alive should you disconnect the power. I have the battery taped to the body of the scanner and plugged into a 9volt plug that you can also buy for probably less than a buck or scavenge out of an old portable radio.

Dear ARRL members and Nickel extra's,

I'm running for a position on the ARRL Board of Directors.
I've been a ham since 1987 and an extra class since
1989. I've always worked and wanted what is best for amateur
radio, but now I see the light. If you elect me to the ARRL Board of
Directors, I promise I'll voluntarily stick my head up my ass like all
previous and current ARRL Board members have done since 1997, and I promise to
work with my colleagues on the Board in their continuing efforts
to further dumb down amateur radio.

Thanks for your support

Ray Deo

It's not the scanner... it's the antenna. Most mil comm is line of
sight (UHF)... so a good antenna up high should be able to feed any
capable receiver decent trons.

go to http://www.mods.dk - there should be something there - the late Bill Cheek had 3 books on mods for various scanners, see what you can turn up on a search - "Scanner Modification Handbook" 1,2 & 3 were the proper titles. Whole lotta things you can do to it.

Well, the 2006 had tremendous mod possibilities, covered fully in Bill Cheek's Scanner modification books. I have one with the newer version of the 456 in it, that scans at about 75 channels per second. I use the excellent Probe software to run this setup, which is capable of having 1000 channels programmed into each of 999 banks, giving it massive scanning capability. You can have Police in one bank, fire in another bank, and Ambulance/hospital linkups in yet another bank, and switch the scanner between them if there is something specific going on, while in another bank, you can have them all in the same one, in case something inter-agency is going on. One thing you wont have, though, is tone decoding, which the newer versions of the os456 lack the hardware for. (the older ones had it, though !) In this same scanner , i also have the CE-232 interface, since hardware-wise, they do not interfere with each other. (You cant run both at the same time, though.) All in all, with the Cheek mod manuals in hand , you have (ahem) "capabilities"..... I also own an Optocom , with the 535 interface, which DOES do tone decoding, and with probe, this radio just flat "Walks the dog" In just about every way. Of course, we dont have much digital stuff up here in the frozen north. But the Optocom is a good choice if you need a bit of trunking, and the discriminator is already tapped and brought out to a jack on the back for those who are inclined to do a bit of "fiddling about" if you catch my meaning..... With Probe and some of the other software out there for the Opto, you can implement stuff like tone coded squelch, and many other features. Cuts down on the aggravation when you have a high antenna and two towns 70 miles apart start using the same frequency.....

Many things can be done to this versatail scanner aside from the cell
mod:

Add an OptoScan board. While the full featured board is no longer
available new from Opto the Lite version is. The Lite does not have a
couple features that you may or not need including PL/DPL decoding and
signal strength. (I think, it has been a while!) If you can find a used
full feature OS456 grab it.

With an OS456 (Lite or full) you can use several different programs such
as Probe, ScanCat or many various shareware programs. When not connected
to the computer the 2006 works as a normal scanner. (The OS456 does not
support loading of freqs for disconnected use.)

Also there are a couple RS232 projects from several sources that will
allow you to load freqs in via computer.

With a discriminator tap you can connect PL decoders such as the CD-2 or
DC440, data slicers, or various other devices.

This is some cab company in Richmond --somewhere. (Repeaters)
452.2375 457.2375 ??? - F-1 Dispatch
453.0125 458.0125 ??? - F-2 Car-to-car
I still haven't found the name of the user.

I used to hear voice paging on 454.350 MHz --now it's nothing but data paging.
(There was this one woman who would come in there at night hours intoxicated and mad at someone for messing around on her. She even threatened to call someone's mother. That's really bad for your reputation when your lady-friends start calling your mother to tell on you for messing around on them.)

Chesterfield County used to be cool to listen to until they went digital.
So did Henrico County and City Of Richmond Police.
(I had their "fleet-map" in my Pro-2052)

Clemons Security was on 461.800 back in the mid 1990's but they've gone somewhere, too --- probably out of business.
(I sure would like to get my hands on their Motorola HTs)

Listening to the news media is NOT ILLEGAL!
(Who came up with that bullshit!)
If it is then Why is Channel 6 audio on the FM Broadcast band at 87.7 MHz?
Yes, I know they use 2-ways but damn --we're getting the news as it happens!
You can hear the engineering department talking with the live newscasts --THAT's NOT ILLEGAL, dammit!!
Telemetry? We don't need to hear no stinking telemetry! (Remember Treasure Of The Sierra Madre')

Remember Billy Tauzin and Edward Markey?
They were like these two disciples of Der Fuhrer who planned to have scanners OUTLAWED from not only the public --but the police, fire, rescue and other public safety authorities.
Haven't heard about any diobolical threats against the scanning society from those two.
(Has anyone else?)
They must have found something to bitch and complain about.
There was a big article about them in "Popular Communications" back in the mid to late 1990s.

I still got my scanner and I am gonna listen to it, dammit!!!
WOO-HOOOO!!!

4600. Anaheim (Disneyland) Freqs....

>>what is your favorite for this band

I currently have a PRO-2006, PRO-2035 (2 of them), PRO-2052, PRO-94 (2 of them but they are not MilAir), PRO-26, PRO-60, and 5 of the BC 780XLT's. At one time I had a BC 9000XLT which in my opinion was a piece of junk for MilAir!

Out of all the scanners listed above nothing comes close to the 780XLT's as far as RF sensitivity or features. By far this is the best MilAir scanner I've used. Probably the second best for RF sensitivity is my PRO-2006 however it lacks speed when it comes to scanning or searching. The PRO-2035's are really good, if you see them on eBay or in a pawn shop cheap these are worth buying!

If you want to see the antennas I use or my shack you can at http://www.MilAirComms.com/shack.html

Don't know if your new to the scanner or not, but.....If you already have frequencies programmed in, make sure that at least one of the banks is active. That's done by choosing 1-0 or any combination of banks. Then if it doesn't start scanning, press SCAN. If you have nothing programmed in, press PROGRAM, enter the frequency (Ex: 123.45), then press ENTER and repeat until all the frequencies you want are in. Then press SCAN. I saw my manualabout a month ago and lost it again, so I can't help with a copy, Sorry. Radio Shack has them on their website. You might try there. Hope this is of some help.
Eric

Here's how to get to the Online Manual

Goto RadioShack.com

Select "Product Manuals" (Near the top of the page)

Select "Communication"

Select "Scanners"

Go down the right hand column till you find 200-0145

That's the online manual for the Pro-2006

Hope this helps even more.....Eric

Any way you cut it there is no really good reason to join the ARRL. Perhaps
this is why 75% of licensed Hams steer clear of the ARRL. Ask yourself what
you gain versus what you spend.
The ARRL is to blame. They offer nothing save for a magazine and a logo.
Gee...why bother? Why waste the money?
I certainly do not need the ARRL....do you?

Yes many companies do still cut crystal. A company in British Columbia Canada called West Crystal is the one I have dealt with. The reason for cutting crystals is that many radios still use crystals for filters and stability. They are a hell of a lot more stable then the IC chips in most of the new radios.

Back when I had a crystal controlled transmitter and a Novice license, I used to grind my own. Used fine lapping compund on a glass sheet to start, and finished up with toothpaste. You would lap a hundred strokes, polish 500 srokes, then put the crystal back in the carrier and try it into a dummy load until you got the frequency down to where you wanted it. Usually the crystal you started with was only a few Khz above where you wanted to end up.

I canceled my membership after reading the Leagues proposal, and canceled my VE Certification when restructuring took effect. After a year went by I got re-accredited again and have been giving radio exams again. The local VE team said they were glad to have me back. But I won't join the ARRL again until they decide to wake up and do something to improve amateur radio. I know the ARRL won't work to improve things though because it would hurt the corporate back account. The ARRL won't be happy until there is a free ham license in every Cracker Jack box along with a flyer for ARRL memebership.

There are a few companies in the U.S. that still do it. I've only dealt with one, so I know what their prices, service and warranties are like. The others I can't swear too. Of those, I've heard of a problem or so, which I know could have been - and have to hope were easily resolved. I'm not sure about scanner crystals any more.. One of the companies "was" still making them for about $5 each plus shipping. I don't know if they had a minimum order or not. Also, speed of your order dictates cost too. If you're willing to wait - gets you near rock bottom price. To get it quicker will cost you big bucks. More than it is worth - I think.

With today's programmable radios, it may not make good sense to buy "a" crystal from a manufacturer. Crystal buying would be best left to those for 2 way radios - if using older equipment as yet or for repairing an older Ham Rig. That too would be based on one's financial judgement as to the worthiness of it's restoration -> I'm talking in the "traditional sense".

The last and best reason perhaps would be that of production. Many circuits still require crystals to operate in a precise manner. So, it would make sense to order "a" crystal to develop a prototype - then - go into Mass production.

Still, there are a couple other companies I've seen ads for in more recent years, which "claim" to make crystals. But their names never stood out in the crowd in my years of radio work. I am not sure - why. "IF" they are the new kids on the block so to speak, then I wish them luck and success.

The ARRL has done many things over the last 40 years that I disagree with.
And they have done a lot that I do agree with. You can say the exact same
thing of a political party. Or the local Sheriff office.

All you folks that keep badmouthing the ARRL just remember one
thing......without the ARRL we would NOT EVEN HAVE Amateur Radio. Spend
some bux and read "200 meters and down" Get an education.

Back in the old days it was a good thing, but starting with the incentive liscensing, the ARRL has done more to screw up ham radio than help it. The CW requirement turned off a ton of people, including myself. I did pass the 5WPM almost 30 years ago, but working CW was/is something I never wanted to do. I tried several times to get to 13WPM, but I get to about 8WPM, and I couldn't take it anymore, it annoys the crap out of me, regardless of what pitch I listen to it at. I never understood the CW fanatics anyway, I had no objections to making the written test harder, but they didn't seem to understand what a turn off it is to some people, and they managed to keep the higher speed requirement until it's probably too late to generate any real increase in new hams. The internet is a much bigger draw to most kids than radio..

Now that I can upgrade without any more code, I have lost most of the desire to do so. I haven't even keyed up an HT in about a year or so...

To make an "educated" suggestion we'd need to know what you want to listen to (police/fire? businesses? aircraft? military air? trains? specific agencies?), and where you live, (whether they use "trunking" or 'digital" modulation, 800 Mhz, etc.)

Some places, such as where I live on the rural north coast of California... I could get along just fine with a 50 (or even 20-) channel radio, and don't have any use for 800 MHz. In a large city you might need one with 800 Mhz, trunk-tracking, digital demodulation (due out very soon from Uniden), civilian & mil air, etc. Tell us more...

Another vote for the Pro-95. I bought one last week and I really like it.

I believe it is Veterans Cab. It is an LTR system. The whhole frequency
plan is as follows:

452.2375

453.0125

461.7875

462.0625

463.9625

4632. RS Pro-2036 **********HELP*********

I recently inherited a RS Pro-2036 and there is nothing programmed into it. I hit "manual" and key in a freq then I got to hit the "E" for enter and I get a "E-LOC" flashing on the screen. And nothing happens. Just normal ferq that the scanner is supposed to recieve. I didnt get a manual with it.

Any ideas? Thanks in advance BIG TIME

I know I just saw an extensive list of trunked freqs for Disneyland.
Can't remember if it was in the detailed So Cal edition or the general
edition of Police Call. I'll see what I can find tonight.

4635. FM Antenna Question *LOW TECH*

Newsgroup: rec.radio.scanner
Date: 2002-11-05 21:20:37 UTC
From: TIA <no1@nowhere.com>
Message-ID: <usgdikcruic8b2@corp.supernews.com>
Source record: 41775

I have a home stereo in my workshop and I want to run a wire for an antenna. I am trying to get a freq of 102.7 fm its about 80 miles away. I can rx them in my truck sitting in the driveway (10 ft away from the home stereo) perfect but the workshop is a different thing. No electrical intefearence at all.Its kinda coming in with 2-6 ft wires one on grnd terminal and the other on the fm terminal. just stretched one to the left anf the other to the right away from each other. But my question is is there a better length? Should I run them thru the wall and up the side of the building (20 ft higher) then spread them or just run one or what? What do you think? Thanks in advance (TIA)

I just accessed an image of it online and it looks like a Bearcat 890 or 895 variant to me,
but I can't tell if there's a program key from the picture. Some scanners have to be knocked into
program mode before you can enter anything, while others like most Bearcats have no such "program" function and just accept input when it's stopped on "manual".

(http://www.rigpix.com/index.shtml) if anyone's curious where...

> . . .

The RS-Pro2036 is the same as the Uniden Bearcat 890XLT
which is only a little different from the 895XLT. You can find the
895XLT manual online at:

http://www.uniden.com/productsupport.cfm?product=BC895XLT

That should give you what you need. JELo

Pro-93 300 Channels
Pro-95 1000 Channels

all else the same...
trunks 400 and 800, 1000 ID codes during trunking, 4x12 alphanumeric LCD,
Motorola I, II, VII plus GE/Ericsson (EDACS).

Computer Programming is much easier to enter the alpha tags and you can
theoretically have "profiles".
Say one for your main location and if you were travelling and were
intrested, one for the drive or destination city.

The difference is 1000 chans vs 300, otherwise the same. I use the program to make it easy to add freq tags as well as trunk ID's. I picked up a set of Nickel Metal Hydride (1600 mAh) and it runs over 24 hours without recharge.

I have yet to get a battery low indication.

At $149.00 it is tough to beat.

No. The ARRL needs me. They need MEMBERS to dissent, not
disinterested amateurs who have no vision of the future of amateur
radio.

Sometimes when I'm in a McDonalds about rush hour, and all the french
fry and microwave oven and cash register beepers going off at the same
time, I feel like I'm back with my code tapes and breaking pencil
leads.

Talk about anxiety.

It seemed like the code tapes were at exactly the right pitch to drive me
up the wall almost instantly. If I can drop it down to about 150hz or
so, it's ok for a few minutes, but at 800, it's like nails on a
chalkboard!! It's funny, but the nails on a chalkboard never bothered me
until I hit 40, now it kills me..

Car stereos are usually the best long range radios you'll find since most have excellent ground and antenna systems. Newer home stereos are usually the poorest you'll find.

If you can't get your current stereo to perform, look for a Zenith "Allegro" brand 1970s era home stereo. These are the integrated tabletop type with turntable on top and tuner / 8-track / cassette in front with 2 detached speakers. These things were high quality, built to last, sound awesome, and have some of the best long range tuners ever put into a stereo. They're dirt common at flea markets. $30 should get you a nice one.

Ontario Unlisted Frequency Guide is dedicated to scanner radio hobbists who are
frequency hunters. You will find lists of Ontario radio frequencies that are
not listed on any web page, published in any scannner book (Haruteq or Scantrix)
or listed in the government frequency list (Industry Canada's TAFL). This list
is all based on research and the patience of the people who contribute to this web page.

4655. Pro-95 Scanner

Newsgroup: rec.radio.scanner
Date: 2002-11-06 13:29:14 UTC
From: Ron <rames14@attbi.com>
Message-ID: <KO8y9.56008$bG.44490@rwcrnsc53>
Source record: 41795

I purchased a Pro-95 scanner and have a question on programming. I had a Pro-90 for the last years and the 95 has a lot more settings. With the poor Radio Shack manual, it's difficult to decipher how to do a number of things. So, here are my questions. I want to put two EDACS trunks in one bank, plus scan conventional channels. When I have all of this in, I get Will County trunk and southern Chicago conventional frequencies, but I can't get the Illinois State Police trunk. Is there a way to do this. I know it probably has to do with the Trunk button, but I can't figure out how you are supposed to work the trunking assignment. Then, I also bought a cable and software that was supposed to be for the Pro-95, but the software only covers up to Pro-89. Is this cable unable to work with the Pro-95? I downloaded Win95 scanner software and that doesn't work either. Other than that, I'm getting good reception and at $149 it's probably the best buy out there. Thanks in advance for any help.

Source record: 41796

You could try a dipole. This is _very_ easy to make:

Get a piece of 300-ohm twin lead, at least 8.5 feet long, from Radio Shack or anyplace that sells electrical or TV antenna supplies. This is the stuff that has two wires in plastic separated about 3/8" -- super common stuff; so common that even the Radio Shack guy might know what it is. Measure 27-3/8" from one end and mark it. Next, split the insulation down the middle with a sharp knife or scissors from the end to your mark. Connect the other end to the antenna terminals on the receiver, preferably to the 300-ohm terminals if your receiver offers that (if not, get a 300 ohm-to-75 ohm matching transformer from Radio Shack to connect to the 75-ohm terminals). Stretch the un-split section up as high as you can get it, then mount it to the wall. Spread the split halves apart in a straight line and tack down the ends. This will result in a "T" formation, and voila! you have a dipole tuned (sort of) to the frequency you're trying to receive, 102.7 MHz. Try experimenting with horizontal or vertical orientation (vertical should work better), and you may have to move it around a bit for best reception. If horizontal works best, you should try to point the broad side of the dipole toward the transmitting antenna if possible because dipoles have nulls in the directon of their ends. The dipole works well because it requires no ground plane, unlike the vertical antenna on your car. The one on your car works well because the car's metal body makes a very effective radio frequency ground plane.

HORIZONTAL POLARIZATION:

```
27-3/8" 27-3/8"
------------||--------------
||
6 ft. ||
or more ||
||
||
RADIO
```

VERTICAL POLARIZATION
(theoretically the best for FM broadcast):

```
|
|
|
|
|
|
----------
|---------
```

RADIO

Perhaps some other readers can post improvements to this arrangement, or can flame me about how stupid my suggestion is.

- Doug

I will be picking up the wire today. One other question , seeing as this dipole is "tuned" what would the freq range be? IE will I have a problem recieving with other stations in the 95.0-102.7 range? Those stations are closer so I wouldn't think there would be a problem.

Doug again thanks VERY much.

hi there i am thinking of buying a pro 94, i am not sure if it is
an old edition or new.

I was wondering if it is as good as the bc 245 ?

i really don't care about alpha tags.

does the pro 94 have ctcss tones?

does the pro 94 allow you to search edacs trunks to find all
the active ids?

can you monitor icalls on the pro 94?

and is it overly about the same for noise rejection and trunking
basics ?

thanks

From what I understand the PRO-95 is just a PRO-93 (what I have) on steroids. Unfortunately, you can only put one EDACS system in a bank. You could put additional conventional freqs in there, if that will help. I have done this successfully with Riverside SO (EDACS), County Fire (conventional) and CHP (conventional) - all in one bank.

On the other hand you can put multiple Motorola trunked systems into the same bank.

Good luck.

No, you can't modify the steps on a Pro 46. This scanner will scan all the channels of the older 43-49 MHz cordless phones anyway, and many 900 MHz cordless phone channels, in addition to many cell phone frequencies--all this despite the fact that the scanner is "cell blocked." "Unblocking" this scanner (possible only on some serial numbers/dates of manufacture of this radio) will enable scanning of more cell phone, commercial/industrial radio, etc. frequencies. The reason that a "blocked" Pro 46 will now scan cell phone channels is that recently the cell phone industry gained new frequency "territory" in what is scanned by what used to be "cell blocked" scanners.

Has anyone else experienced this intermittent glitch?

Setup:
Bank 1, near 100 freqs. that I scan regularly
Bank 2: about 50 freqs. if I'm really bored (not much action on bank 1 freqs)
Bank 3: about 50 more freqs
Bank 8: 10 MO type 2 trunking freqs; had to make 2 group IDs in talkgroup 0 that were non MOT CNTRL but non-voice (hiss sounds) talkgroups 1, 2, 3, and 4 all programmed, I usually only put 2 and 3 ON

All banks in closed mode.

If I'm scanning banks 1 (conv) and 8 (mot mode), all is cool. If I turn on banks 2 or 3, the scanner stops on bank 8 Motorola CNTRL channel, displaying the talkgroup ID's on bottom line as they come up. I have to "play", turning off bank 8, hitting SCAN again, then turn on bank 8... I'm not sure of the sequence that works, but I can get banks 1, 2, 3 and trunk bank 8 working properly -- its just that it sometimes stops working.

I took the 5WPM almost 30 years ago, I'm done with CW, period. I wanted to get the general just to shoot the breeze with my friend down south a couple of times a week. I still might get it, the written is a nonsense test anyway. Some of the questions are insane. As far as any excuse being a good one, as far as CW is concerned, yeah. I resented having it shoved down my throat, kind of like having a religion shoved down my throat when I dont want it. For some hams, CW is a religion. Why, I don't have a clue. I was heavy into RTTY decoding for a while, and I didn't think learning all about it should have been manditory, like the CW fanatics do with it.

I've never seen/heard a test where they could do anything to change the pitch anyway, it seems like it's 800-1K and that's it. It's on a PC, or it's on tape. Not to mention the goofy spacing they used when a friend of mine took the thing about 10 years ago. It was kind of funny, it was like someone just randomly keying dots and dashes. The look on the guys faces that were taking the test was great. Nobody passed, but they went and got another tape and all but two passed on that one. My friend was one of the two, he was rattled by the first tape, and couldn't get calmed down enough to pass. What a waste of 5 hours of standing around!

You sound pretty happy in spite of the difficulties.

First, yup, the Radio Shack manual is very poor in many regards. I think that my 8 year old could write one better than it. (Come to think of it, he could probably program my scanner better than me. :)

Radio Shack software and cable -- no good. I got a $23 cable from http://www.pro95.com and use Win95, both work great.

As to trunking 2 EDACS at the same time, I dunno. I have 1 Motorola trunk and lots of conventional freqs., and it USUALLY works fine, but I suspect an intermittent glitch in the scanner programming. I tried to post about it, but I don't see my post...

Go to the bearcrap website and look for the manual for the bearcrap
890xlt, it will tell you have to program the 2036 as it was the radio
shack equivalent.

Ideally, you would cut the antenna for a frequency in the middle of the range. It shouldn't matter too much because the difference is very small. Here's how you calculate it:

Length of each dipole "arm" in inches = 12 * 234 / (frequency in MHz)

which, incidentally, is 1/4 of the wavelength. The two arms together make a 1/2 wavelength balanced antenna.

Wow! You used lapping compound and toothpaste for fine? I only used
Comet Cleanser. Bit more crude, but did the job. If I went too far, I'd
mark some pencil marks on the crystal to move it back down. Worked.
Little less precise than your method, I suppose. :^)

Dan, air-photo and satellite interp, and digital image processing in
no way reminds me of beeping french fryers at McDonalds. How odd to
think it would.

But if theat's what you think is important for amateur radio, you just
keep thinking that.

Hello,

I've long since forgotten what frequencies are used to pipe MUZAK type feeds and was wondering if anyone knew offhand. All I can remember is that they are up around 900MHz.

Oh, also, anyone know of a good database of commercial FM and AM stations listing frequency and transmitter city? Needs to be pretty complete as my target interests are more or less rural areas in north central TN. I used to have a really good one that actually had maps of the antenna sites, but I have since lost the url, and not sure where to look using the FCC databases.

TIA!

Most of the wireless microphones are in the 170, 171, and 173 MHz range.
not 172 MHz.

Utility company telemetering transmitters populate
the 172 - 173 MHz area and emit the short duration
bursts you describe. The brief transmissions
are much easier to observe visually on a spectrum
analyzer than to hear them while scanning. Some of
the transmissions are too short to open the squelch.

On Wed, 06 Nov 2002 20:28:31 +0000, apone@apone.com wrote:

Analog radio + computer == "digital scanner"; we are _all_ criminals now. I own many radios and computers which can (and in fact have been) connected in ways that easily contravene these beknighted regulations. Virtually everyone reading this has done likewise. Maybe they'll declare a "receiver amnesty"? Run "unwanted radio" programs, where old widows can turn in those wide-IF receivers their dead husbands used back before even knowing what a hilbert transform was to be an enemy of the State?

Par for the course. The real outrage here is not that various people won't be able to get a digital scanner at RadioWorld (I mean, come on, isn't it obvious what you'll do?) These stupid rules are claimed to be "protecting personal privacy" (a joke claim from an entity that invades it at every opportunity, but let's just ignore that), but are in fact degrading it, as the rules encourage radio engineers/companies to not build in mechanisms that actually would protect the privacy of those using their systems. From the governments perspective this "makes sense": if privacy of this sort actually became common it would make it more difficult for the Queen and her tireless minions and butt-lickers to listen in whenever She wants to. In essence, deep down, their position is that "privacy" is a _privledge_ that our government grants you should you possess the right license, carry a well-formed permit, and have filled in all the forms and paid the appropriate fees to the Receiver General of Canada -- not something that you can buy (and sell!) on the open market.

4693. Re: Opinions on ICOM R2.

Newsgroup: rec.radio.scanner

From: Jim Zengerle <jzeng@nbn.net>
Message-ID: <3dc9fbb8_3@corp.newsgroups.com>
Source record: 41833

I recently purchased an IC-R2 and I am very pleased with the scanner. I wanted to break away from the RS PRO series to something different than what I have been using in the past.

Great little scanner. Good audio and programming from a computer features are a big plus. The cloning capabilities require an additional cable and software. I was a little leery at first of a radio that did not have a keyboard, but the setup that ICOM uses on the R2 works great and about as fast as a keyboard. I did not find this objectionable after I got to use mine.

One feature I don't like is holding down the function key and up or down button to start scanning. I would have preferred just one bottom for this function. I must admit that this radio is not for the faint of heart. Read the instruction manual several times and familiarize yourself with all that the features of the radio.

I am sold on the ICOM scanner and will probably never look back on PRO scanners again.

Also, suggest that you invest in some NiMH 1800ma batteries and charger.

Source record: 41839

Hi Chris,
I've had one of these units for a few years. About the only
thing that goes wrong with them is drifting of the reference oscillator
crystal, causing off-frequency operation. It is about a 10 minute job to
set it back on. I did buy the service manual for my R100. There are a
couple of I.F. gain controls inside the unit. When you turn these controls
up, AM gain is very similar to the R7100. Just though that I would let you
know, in case you don't sell it. The R100 is a very good unit; it uses a
doubly-balanced diode ring mixer throughout the tuning range, along with
switchable bandpass filters over the whole tuning range. I don't know how
they got so much into the small package.

Pete KE9OA

They are all trunked on Police, but, you can hear the FD and Rescue similucast on 154.325 for VA. Beach and you can hear the helicopter, Nightengale, which operates out of Sentara Norfolk General, on 155.34, 155.895 or 155.820. They talk back to Norfolk General Trauma on 462.950 & 462.975.

Here are two very likely possibilities. Search for a chip with either of
the following numbers:
MC-3357P or TA-7761P
Your scanner will only have one of these two (not both). If you find either
of these chips, the tap point in pin 9.

What do you mean by "steps?" Also, what range of frequencies are you trying to scan? Some of the older Radio Shack base scanner units (e.g. Pro 2003, I think) can scan the 850-912 MHz band (used by cell phones) in 30 kHz steps, which is what you need if you wish to monitor nearly all analog cell calls in your area. However, if your scanner will scan in only 12.5 kHz steps, it will still hit a cell phone channel every so often. There are so many people out there with cell phones anyway that you will still pick up more cell phone calls than you will ever want to listen to. Cell phones hop channels a lot, especially when they change cells (but not always). This means that you still have a chance at listening to Susie Q at the mall even though your scanner misses her (let's say) 5 out of 6 times. (So I hope you DO like the way Susie Q talks.) You are going to have to fire up Google and look yourself. Also, try Ebay. There are web sites devoted to this topic, so you need to do some basic research first. This is really too big a topic to cover in a newsgroup posting. If you get an analog scanner that picks up cell phone calls then chances are that you will not want to invest in a digital scanner, or otherwise try to intercept digital cell calls; an analog scanner enables you to bombard yourself with enough hours of inane cell phone chatter as it is.

The Winscan780 just sucks, dont waste your time or money on it. Now the ARC 780 is much better, and the best on the market. Also look at Trunkstar 780 and AFS780. I like Trunkstar but they all work great except the Winscan.

ARC780 http://www.butel.nl/bc780/bc780index.html
AFS780 http://209.95.32.7/avraam/bc780xlt/download.htm
trunkstar 780 http://www.scanstar.com/trunkstar780.htm

Yeah.. 'just' buy the radios. For what they want for moto's for our county wide digital, we could buy 4 standard UHF radios. My thought it to wait for everyone else to migrate, and we'll have our own uhf frequency. :)

The next county north of me uses mostly 150's and don't currently have
any plans to move. In my county, there is a 500mhz trunked system in
place on which many of the small departments are dispatched, as is the
Sheriff's dept and a couple of the local PD's have gone to digital
systems, but there is only a couple in the 800's, with the state
police using an 800 mhz trunked system.

They are probably in the 30 to 50 watt range. Could be higher. Low band VHF (30-50Mhz.) is used a lot in hilly and mountainous areas. It get down into those valleys and canyons much better than the higher frequencies. The downside is this band of frequencies are prone to skip which causes interferrence.

Rod

I am throwing around the idea of buying a PRO 2026. Might anyone have one with the box? I don't want one that has had the stupid cell mod performed, but I want the older version at it is more sensitive to weak signals. Send an e-mail to me and remove ".no.spam" so I get it if you have one. I would like to find one with the original antenna, box, and owner's manual. Preferably in mint condition.

Sincerely,
BTJustice

Source record: 41874

>> I'm getting as usual this time of year very readable sigs in 31.595, 31.640 etc. What is the pwr of the base transmitters ?

The frequencies you list are NOT used by civilian law enforcement in the U.S.

The lowest VHF frequencies available for civilian law enforcement in the U.S. start at 37 MHz.

31 MHz, in the U.S., is alternately assigned to state government forestry and commercial business use. The spacing is 20 kHz ... so the closest frequency to 31.595 MHz is 31.60 MHz.

Both 31.60 and 31.64 are allocated to business use.

You may be hearing U.S. law enforcement traffic via Central or South American repeaters operating with inputs in the 37, 39, 42 or 45 MHz range.

At least I'm not loosing my mind. (I hope.)
I usually turn banks on and off at random and it eventually starts working okay.

I've also had trouble with non-voice (hiss) coming across. Attempts to solve:

1. Put ALL banks in closed mode, put in IDs for "data" talkgroups, turn that talkgroup bank off, this works pretty consistently.

2. LOCK out "data" talkgroup IDs - this does NOT work but should according to instructions.

If ANY scanning bank is not in closed more, the "data" talkgroup tends to get through.

I've been working on this (not very scientifically, I must admit) for a while now. Its frustrating.

Probably. The Pro 2050 (as an example) will scan all 60 or so channels of certain GE and other makes of 900 MHz cordless phones, and every 6th channel of some Panasonic cordless phones, but it only scans in 12.5 kHz steps in this band. Another problem is that too many cordless phones use wide band FM compared to the relatively narrow band of a given channel picked up by the Pro 2050 (again as an example). You can sometimes get a Pro 2050 for $80 U.S. Again, you are not searching the web for info about new and used scanners! This is obvious from your post. There are ham radios which will scan in 5, 10 15, etc. kHz steps, but in only the ham radio bands and not in cordless phone bands. There are impartial reviews out there about all the makes of new and used scanners, which you have obviously not read. There are customers who bought scanners and feel as though they got burned, and they do not feel embarassed to say why on the web. I urge you to avail yourself of this free information. Did you look up the model Pro 2003, for example, on Google? Also, I think that you need to get a cheap scanner and experiment with it. Ideally, get an old 20 channel CB walkie talkie or a used FRS radio and experiment with it before you get into the more "posh" scanners. Have you tried "tapping" your own phone, watching how the line voltage changes, etc. when you take it off hook? This is how I got started.

Hi,

I have a Uniden Base Station Scanner and would like some help in constructing a better antenna for it.

I would like to know if a long-wire antenna would make a difference to my VHF reception range. I am able to string it up about 45foot above the ground on one end and to the top storey of the house at the other, overall length would about about 30metres. It would not be perfectly horizontal, but sloping down slightly towards the house.
My other question involves the actual connection of this wire to the scanner. If I simply connect this wire with a clip to the current telescopic antenna is this ok?
I would also like to know the best and cheapest sort of wire to use for this application?

Thanks in advance

Cheers
Justin

Hello Justin, a long wire type antenna really will not help much on the frequencies that are covered by a scanner and will pick up more noise than you want.

You really need a 'matched' antenna for best results. You can find several designs from dipoles to beams on the internet. The simplest would be a dipole antenna that is cut to the band (frequency range) you want to receive or a multiple band dipole (one dipole cut for each band) and fed with coax to your scanner. The antenna must be mounted vertical for best reception and you should remove the stock whip antenna from your scanner.

The higher you can get the antenna the better as VHF and UHF signals are mainly line of site and the higher the antenna the better line of site it has. You will need to use a good quality 9916 or better coax for any run other than a very short (10 feet or less) for best results on VHF and UHF.

You can find construction plans for 'gain' type of antennas on the internet as well and these would make your efforts more worth while than a dipole but they are not as quick and easy to make.

Mike

In almost all cases, I would think that the prices would be better
today.

For example, the standard red LED's cost around $5.00 back in the mid
70's.

It's sad that "Anonymous Bud" had to be both nasty and stupid in the same comment.

The subject head, and the first six posts, all referred to civilian police comms in the U.S. ... not military, and not in other countries.

The comments about "nibbling on leftovers" and "mumbling" ... I don't understand writing that, since our paths have never crossed on the Internet before. I can only conclude you are just an unhappy, negative person all the time. I feel sorry for you.

I agree that the long wire will not achieve your desired results due to noise and receiver overloading problems.

If you don't mind spending a little money, I've found that a mag-mount dual-band (146 and 440 MHz in the US) in a large metal plate (like a large cookie sheet) placed up high is great for VHF/UHF scanning. For some more money you could get a dual-band base antenna with radials that could be mounted on a pole. It is possible to get a decent dual band mag-mount mobile antenna for as little as US$19.

If you want to make something, a 1/4-wave ground plane antenna is easy to build and works great, but will be more band-limited. But if you're interested in a certain range, you can cut the antenna for the middle of that range for excellent results. For example, this style of antenna will be a bit less than a half-wavelength tall overall, so for 150 MHz, it would be under 3' tall. Just look up "1/4-wave ground plane" and you'll find plans online (one example: http://www.alabamarailfan.com/scanner.php). All you need is a bulkhead-mount BNC female, some stiff wire or brass rod, a few bits of hardware (#4-40 screws and nuts) and a soldering iron. Using this type of antenna, you can use a common 50-ohm BNC cable assembly to connect it to your radio.

Uniden is saying it both ways, depending on whom you talk to or what
webpage you read from. According to their spokesperson, Jennifer
Ainsworth, the new digital capable scanners will not track 9600 bps
control channels. Uniden will be placing a statement on their web site
to that effect. Jennifer went on to say that there
are plans to support this in the next model(s) of digital scanners.
< http://groups.yahoo.com/group/DIGITAL-SCANNING/message/1606 >

A not-unidentified Uniden distributor said:
"The new Uniden digital scanners will monitor three of the four types of
APCO Project 25 systems. They are:
Conventional P-25
Trunked at 3600 baud
Mixed Mode at 3600 baud

"The other APCO P-25 trunked systems operate totally digital at 9600
baud. The ability to monitor these pure digital systems is still in
development. There are a few agencies that use this total digital system
and include the states of Michigan, Colorado, Minnesota and the city of
Austin, Texas.

"The BC250D and BC785D are just the first in a family of Bearcat digital
capable scanners to be produced by Uniden. As we continue to grow the
family in this series, so will their coverages of various other digital
signal systems."

Uniden's 10/2002 Flyer for the 250D and 785D (see it at
http://www.scannerworld.com/template.asp?viewproduct=BC250D) says
"Perhaps the biggest question is in regards to the four different types
of APCO-P25 radio systems and whether or not our digital capable
scanners can monitor them. Uniden is proud to announce the world's
first APCO P-25 digital scanner will monitor three of the four types of
APCO Project 25 systems. They are:
Conventional P-25
Trunked at 3600 baud
Mixed Mode at 3600 baud

... <snipped> The other APCO P-25 trunked system operates totally
digital at 9600 baud. The ability to monitor these pure digital systems
is still in development. Therefore the first generation of APCO P-25
scanners, the BC250D, BC785D and BCi25D willl not monitor these systems.
...<snipped> As we continue to grow the familyin this series, so will
their coverage's [sic] of various other digital systems.

------- sounds pretty clear THERE ------

Here's Uniden's statement as it also appears on the
http://www.grove-ent.com/apco25.html page:

UNIDEN STATEMENT

APCO P-25 digital scanner will monitor three of the four types of APCO
Project 25 systems: Conventional, Trunked at 3600 baud and Mixed Mode at
3600 baud. The APCO P-25 trunked system at 3600 baud is the most common
P-25 system in operation today.

There are a few agencies using the APCO P-25 trunked system operating at
9600 baud deployed in the states of Michigan, Colorado, Minnesota, and
the city of Austin, Texas. The ability to monitor these pure digital
systems is still in development. Therefore, the first generation of APCO
P-25 scanners, BC250D, BC785D, and BCi25D will not monitor these
systems.

Rest assured that the BC250D and BC785D are just the first in a family
of Bearcat digital capable scanners to be produced by Uniden. As we
continue to grow the family in this series, so will their coverage of
various other digital signal systems.

Jennifer Ainsworth
Media & Trade Show Manager
Uniden America Corporation

Communications Electronics Inc, who happen to be in Michigan, where the developing statewide system uses 9600 baud trunking control, says: "Not compatible with 9,600 baud APCO digital control channel with digital voice, AGEIS, ASTRO or ESAS systems. With the optional BCi25D APCO Project 25 Digital Card installed, you can monitor public safety organizations who currently use conventional, trunked at 3,600 baud analog control channel and digital voice and mixed mode APCO Project 25 systems."

My Pro 2006 seems to experience what little image problems it has in the 108 - 136 aircraft band. Images are of 800 Mhz band business users.

It also seems to be less sensitive in this band, but I cannot prove that for sure.

Any ideas?

If you are going to control your 780 from your computer, you need a DB9 Male to DB9 Female :STRAIGHT THROUGH Serial Cable, like the Belkin "F2N209-06" EXTENTION CABLE, which is used for a Mouse or CGA/VGA Video Cable Extention.

If you are planing to CLOAN a scanner, you will need a NULL addapter for the same cable.

4794. AOR AR8200 vs AR8200 Mk II

Newsgroup: rec.radio.scanner
Date: 2002-11-10 18:32:39 UTC
From: Roland <va3xaAAA@rac.ca>
Message-ID: <1Dxz9.1063$md7.89565@news20.bellglobal.com>
Source record: 41734

Hello all,

I've read some reviews that talk about the technical differences between the AOR 8200 and the 8200 Mk II receivers but no one talks about the differences from actual users.

Very interest in hearing from folks who have tried both receivers and I'm curious if there is much difference between them. Would also like to hear any comments on the 8200, good or bad.

In a nutshell, I have an opportunity to get an 8200 for $300.00cdn less then a Mk II. So is it worth it or are the upgrades in the Mk II worth the money.

Please e-mail me direct (remove the AAA from e-mail address) or post here as I'm sure others may be interested. Thanks all.

Roland

From: Russell <rustyspam@dccnet.com>
Message-ID: <3DCED948.301@dccnet.com>
Source record: 41739

Hi there,
I have a Uniden Bearcat BC-3000XLT, I have replaced the NiCad with a NiMH pack weeks ago but after charging the battery over night and using the radio for about 15 minutes the "LOW BATTERY" warning starts to beep on the display? I have heard of this problem in the past with these radios and believe there is a mod to correct the problem in the pack by jumping or over riding the low voltage warning in the pack?..any body had this problem or know how to fix it?...any help would be greatly appreciated!
Please e-mail me directly at rusty@dccnet.com
Thanks very much-Russ

4800. Antennas for 800 m

Newsgroup: rec.radio.scanner
Date: 2002-11-10 22:58:06 UTC
From: Linda Grant <lgrant@softhome.net>
Message-ID: <Xns92C2B6C7C47ADlgrantsofthomenet@65.100.3.61>

Just for you Ian W something...
If i ask questions here , it is to get advice not critize ! You may want to try another kind of hobby than responding to post on the internet because any newsgroups is to help each other, and ask advice of experts . If I want to search the internet, i will not come here to look for answers. And to size your response , you havent even answered my original post about the panasonic cordless freq and steps, you go on and on about cellular and i should do some research instead of seeking advice here and disturbing you, this is not a moderated newsgroup ? please let the experts in communications answer . You can keep on listening to scanners instead. With all due respect...

No. I bought a new one from Radio Shack a few years back when it had been discontinued. It cost me $89.97, and it came with everything, including a warranty. It's a nice radio, but $100 is too much to pay.

If you look around, you may still be able to find one at a Radio Shack. Who knows what the price is by now?

I think what they meant is you can monitor the digital comm's themselves...

Even if you can't trunk track the system, the card should still decode the digital voice signal. It will be the same on either a 3600 or a 9600 system - just scan the freq's conventionally. Yeah it's not the greatest but I'd rather hear "211 in progress at....." than listen to "10111010101101010111010110 11...." :-)

Up to you I guess. You can always continue to watch the nightly news for *their version* of what's going on, I suppose.... not good enough for me...

Hey Mr "News"....

Yes, Ian could have just spouted out the answer like you wanted, but then you'd just be back 5 minutes later with "Yeah, but..." or "What about..." etc. Instead Ian offered you something far more useful, and that is the places to look up the information (and the answers to all the questions that the original answer will bring up) instead. It's the whole "Teach a man to fish" theology. Keeps us from getting the same 8 questions in here every 10 seconds....

BUT: What Ian, I and others here often forget is that once upon a time, long ago, when 8 channel crystal controlled dinosaurs roamed the earth, we were newbies too, and we asked some really STOOPID questions. Oh brother, I know I did..... ugh. So now I will pay my penance for my usenet sins and give you your answer - how about that?

So to answer your question quite simply: Buy a new scanner with programmable steps and save the one you have for something else. The fact that you had to ask the question tells me you are best off not tinkering with that scanner's finicky insides. Trust me - from one who learned the hard way.... See? I was once a clueless newbie too.. That poor scanner never saw it coming. Ouch....

Now, remember... you'll need to "pay it forward" later on when you are an expert and some newbie pops in here asking if he should take apart his BC250D to turn it into clock radio mp3 player that receives satellite phones, OK? Later...

4834. AM Radio wattage v. distance

Newsgroup: rec.radio.scanner
Date: 2002-11-12 00:18:00 UTC
From: mipi@aol.comNOJUNK
Message-ID: <20021111191800.03714.00000288@mb-ma.aol.com>
Source record: 41674

I realize the distance of an AM radio transmission depends on many things, height of the antenna, terraine and wattage. BUT, is there a general rule of thumb of watts of power v. distance.

i.e. A 1000 watt AM station normally would cover a radios of ____ miles!!

What I'm doing is making up a trip map and marking it with the AM radio talk stations as I travel... and I'll use a compass and ROUGHLY show the tramsmission coverage area of a given station considering it's power.

Thanks..... mutt1114@yahoo.com

> (or worse)?

If it is the one I am thinking of (longer, slight bulbous section
near the far end) it performs NO better! I ran some tests on one using my
Optocom and found what little variation in signal strength there was
favored the original. I've found Uniden's replacement duck (about $8.50
or so) to be a better bet.

I think that's a bit of an overreaction. The regulatory body in Canada
is restricting permits for scanning receivers that demodulate digital
transmissions. This has nothing to do with hooking up your scanner to a
computer.

4838. Need advice on helping a friend with Muscular Dystrophy.

Newsgroup: rec.radio.scanner
Date: 2002-11-12 04:14:55 UTC
From: Bosco <bosco@aol.com>
Message-ID: <3f%z9.5947$6Z.3276@nwrddc01.gnilink.net>
Source record: 41678

I realize that this is a bit off post, but I'm not sure where else to turn for advice. I figure that there might be some EMTs / Public Service people who might relate to the issue. Thanks in advance for your toleration.

Good evening.

I have a problem, and need some advice. I was hoping that some newsgroup readers might send some ideas along. Please note that this is not a scam, or a crooked money making scheme.

I have a friend named Howie Gleason. He is burdened with Muscular Dystrophy, and is a resident at a local chronic care facility here in Central Massachusetts. Howie sometimes breathes with the aid of a ventilator, and is confined to a wheelchair. In spite of these limitations, Howie possesses an incredible attitude, and remains active with volunteer work in the community.

In conjunction with the Massachusetts Muscular Dystrophy Association Lock Up 2002, Howie is trying to raise $2200 by 11/20/02. Through door to door canvassing (in his wheelchair), he has raised $400 so far. Unfortunately, he is $1800 short of his goal, and time is running out.

I'd like to send this message around the web to see if we can find 1800 people to each send a check for $1 to Howie and the Massachusetts Muscular Dystrophy Association by November 20, 2002. I'm just not sure how to go about getting the message out without spamming email addresses, newsgroups or mailing lists.

Where might you post a message asking people to mail Howie a check for $1.00? If 1800 people send a single dollar, Howie will make his goal. I figure that people can afford the cost of a cup of coffee or a bagel with cream cheese to help out a great cause (remember Jerry Lewis and the telethon?) I'm just not sure how to avoid generating SPAM while finding a way to get the message out quickly.

Thanks for your advice,

Chris

P.S. If you yourself would like to help, please send a check for $1.00 made out to the Muscular Dystrophy Association of Massachusetts. In the comments section of the check, put the name Howard Gleason. Send the check today to:

Howard Gleason Fund / MDA Lockup
Post Office Box 383
Holden, Massachusetts 01520-0383

100% of all funds collected will be turned over to the Muscular Dystrophy Association. Time is of the essence because Howie has to turn in his collections to MDA on 11/20/2002.

Ask friend for the name of a real person at the Muscular Dystrophy Association
of Massachusetts. Call the real person and ask if it's for real. Then
think about posting, most likely in *.wanted newsgroups. And post the
real number of the real person with it, so readers can verify the truth
of the donation activity.

Not much -- some frequency hopping/spread spectrum cordless phones and
wireless LANs.

One of the AM (MW) stations in Wellington NZ uses a half wave dipole
for a transmitting antenna. It is strung between two huge towers to
get it well up off the ground plane, and has a very impressive coaxial
center feed. Not quite 800 meters, it was about 200 meters end to
end...

>i.e. A 1000 watt AM station normally would cover a radios of ____ miles!!
No easy solution. Part of it is the transmit power is generally not
really watts, but effective radiated power, and depending upon
radiation angle of the antenna, and the effective area of the
receiving antenna. Most stations also utilize directional antenna as
well, particularly after sunset.

The short answer is there isn't any simple formula, but lots of fairly
messy ones,and you need to know all the fine points, and add in the
propogation forecast for good measure.

Sam, I have the 20-034. It did make a noticeable improvement especially on low band. Which is what I mainly bought it for. It's worth the $16.

Are you listening to a trunked system? If you are getting a full quieting signal, changing antennas won't make any difference in what you can hear.

At the risk of disagreeing with my friend Dan, (that's alright, we've
agreed to disagree, at least sometimes), I've been quite satisfied with my
sample of this antenna. I've found it makes a noticeable difference on VHF,
especially VHF-low, compared to the stock antennas on both my Pro-43 and
BC245-XLT. The higher the frequency, the less the improvement, at least in
my experience, so your improvement may depend on the frequencies you
monitor. I've also found it makes a satisfactory replacement antenna for
the rubber dummy load that came with my ADI AT-600 dual band ham HT.

As the man says, your mileage may vary.

Hello. My name is Bubba and I was recently released from prison and given a job in a local grocery store cleaning the bathrooms and emptying the trash. I threw a dog at a tree and killed him so I got 2 years to life but only served 7 years lucky me. I was also a big brother's bitch and was corn-holed frequently. As it turns out, I need to have an anal cavity repair surgery but I have no insurance. I am farting razor blades here folks. I have to buy a new 3 pack of Fruit Of The Loom underwear at Wal-Mart everyday which takes a good chunk of the $53 I make after taxes per week. I could bleed fart my way to death. At $53 per week, I cannot afford the surgery unless I sexually please my surgeon which could make my condition worse though he says he can fix it no matter what. I think I am just being used. I needs your money so please send it to me at...

I have two Pro-46 scanners with the same problem. They have very poor reception, especially in the 800MHz range. Does anyone know if RS will still repair this model? Is there somewhere else I can get them repaired?

Any help would be appreciated.

Thanks,
Gary

Sounds like it could be a bad charger.
Or,
Did you get a new entire pack or did you replace the cells in your original pack? If you replaced the cells, then you may have something wrong on the circuit board in the pack.

This may seem like a frivolous answer to your question, but why not
just "unprogram" the offending talkgroup ID? Then it wouldn't be
there to harass you.

The channel in question could be a data channel, one transmitting mdt
data, weather data from remote weather reporting stations, or river
level data. Or even digitized voice.

Either way, there is not much you can do about it. The RS/GRE line of
scanners (PRO-92. 93, 95, etc.) all perform this way: In OPEN mode, you
will hear all talk groups, you cannot lock any out; in CLOSED mode, you
will only hear the talk groups you have entered and not locked out, you
will not hear any you have not entered.

I understand that with the Uniden TT scanners (at least some of them)
you can lock out individual talkgroups in OPEN mode. Certainly would
have been a great improvement to the RS/GRE line of scanners.

It looks like a scam, but he requested checks being sent to the Muscular
Dystrophy Association of Massachussettes, not to Howie Gleason. If it were
otherwise, I'd say it definitely is a scam.

But, on the internet, it's impossible to tell at times. Just to be safe,
I'm not sending anything.

Don't thinks so. Least not there are no CB UHF repeaters near me (unless you
count G1LVN-L that is)

Source record: 41604

Hello fellow scannists!

I'm looking into the Pro-95 or Pro-93 but some issues beg me to ask some questions.

I'm under the assumption that both scanners only differ in memory channels. Is this a fair assumption?

I downloaded the Pro-95 user manual and tried to find out if you can adjust the step size per conventional frequency/memory slot, similar to AOR, ICOM and other fine scanners. I couldn't find any mention of it.

What I did notice was that in most areas of the spectrum (in the back of the book) it says the default step size is 6.25 kHz. Is this a typo? Why didn't they use 12.5 kHz? It defeats the search speed/effectiveness doesn't it?

Is this also true of the Pro-93?

As well, it says the airband 118-137 uses 12.5 kHz steps. WTF???

Next, on a full time scan of three banks (300 channels), how long before the batteries expire?

I'm leaning towards the Pro-93 simply because I don't need 1000 memories and was thinking the battery life might be better, but it's $199 and discontinued, according to my RS salesguy. You'd think they'd kick the Pro-93s out the door at $100 or so.

Any thoughts?

Andy

Hello,
just thought I would mention.
I just bought one, it's a little new to me to figure out, but anyway, I was
told they would be ON SALE for $149 until the 24th of November

Is the Pro-2053 scanner interface jack stereo or mono? Can't tell by looking. I've seen ads that say some models need stereo-to-mono or mono-to-stereo adapters, but which is which for what model is unclear.

WRONG! The address was:

Howard Gleason Fund / MDA Lockup
Post Office Box 383
Holden, Massachusetts 01520-0383

That looks like Howard's personal PO Box!

If they both have the same problem, then maybe you are in a geographic area with poor reception, or in a concrete building with a lot of rebar, etc. Try travelling around town, etc. with both radios, and seeing what happens. Also, how long an antenna are you using? You should be using the "stock" rubber ducky antenna, as this is the best length for the freqs you are trying to monitor.

BC785D is an analog scanner manufactured with the capability to
add an optioal digital card to the scanner which allows the additional
reception of APCO 25 digital signals in addition to analog frequency
reception.

> >Orders are now being accepted on a first in first out basis.
> >BC785D scanners are anticipated to ship in late December, 2002.

Optional digital card (BCi25D_APCO) may be ordered by clicking on link
at bottom of this page. This optional card allows the BC785D and the

BC250D to receive APCO 25 digital transmissions.
Scanner World does
not charge credit cards until merchandise is shipped to customer.

12.5 kHz is the new, FCC mandates, standard channel spacing in the air band. There is some usage in Europe, but I don't think any usage in the US, yet. But, it will happen.

Similar 6.25 is the new spacing in some of the public service bands. A listing of these can usually be found in the Police Call publication. Any new scanner will conform to this, or it will miss frequencies.

Mono. The PRO-92, 93, 95, 2053, and 2067 all require a 1/8" mono plug
be used.

The jack is mono, same as PRO-92, PRO-93, PRO-2067, and PRO-95.

4876. NH interfearance from digital

Newsgroup: rec.radio.scanner
Date: 2002-11-13 01:30:41 UTC
From: EscoWizard <escowizard@earthlink.net>
Message-ID: <5XhA9.1742$Bh1.153815@newsread1.prod.itd.earthlink.net>
Source record: 41615

Hi

I am running five scanners, mostly Uniden Sportcats.

Ever since the NH State police switched over to the new digital system, I have been getting what sounds to me as digital signal interference. Sort of modem type sounds with a lot of static.

I can't buy a digital scanner right now.

Does the rest of the police radios get the same static? or
did they have filters installed?
Can I install a filter?
Is one available?

Its not just my area either. I get it on the road too. Many different freqs too.

Any thoughts?

Scott

> adjust the step size per conventional frequency/memory slot, similar to
> AOR, ICOM and other fine scanners. I couldn't find any mention of it.

Step size is not adjustable.

> What I did notice was that in most areas of the spectrum (in the back of
> the book) it says the default step size is 6.25 kHz. Is this a typo? Why

It's an attempt to account for the recent split channel assignments.

> Is this also true of the Pro-93?

Yep, same basic radio.

> As well, it says the airband 118-137 uses 12.5 kHz steps. WTF???

Assignments in the US are 25 kHz so that covers everything.

> Next, on a full time scan of three banks (300 channels), how long before
> the batteries expire?

What kind of batteries? NiMH should run 16 hours or more.

> I'm leaning towards the Pro-93 simply because I don't need 1000 memories

I've heard different prices - get the one that has the best price at your
local store. Battery life will be the same for both.

Open the radio up and check to see if the wire from the antenna jack to the
PC board is broken. It's an easy repair if it is.

I think you have a bad cell in your battery group. I put NiMH in my XLT3000 and
it runs 10-11 hours before "low battery" warning displays or beeps.

Actually european air step size has been 8.33kHz for awhile now, but isn't going to be a big deal in the US for quite awhile.

ICOM scanners are fine tools. They cover more bands, and need more step sizes available. By the same token, they don't scan as fast, offer no trunktracking, and bank selection for scanning is one bank or all banks (IC-R10, 1000 memories at approx 12 channels/second = 83 seconds from channel 1 to channel 1) . The GRE/Uniden made scanners are better tools for scanning Public Safety bands since you can cover multiple agencies, in any bank combination you want.
The batteries don't care how many channels you are scanning. What drains them the fastest is when the radio is receiving something which makes the audio amp work. The least drainage happens in manual mode, and no signal is being received. Searching, scanning, trunktracking all have about the same drain.
Two sets of NiMH batteries with a charger have kept me from ever using a wall wart on these scanners.

Aaggh! Your right, of course. Then I wonder why the '95 does have a
12.5 kHz step in the air band?

I didn't know there were any baby monitors on 2.4 GHz -- I thought they
were all on 49 MHz. I forgot about wireless cameras.

I have the 95 and it is bat fast on the search so the 6.125 doesn't hurt you. As to battery life, I put in a set of Nickel Metal Hydride (1600mAh) and I put 3 days on it and never got a low battery warning. That was running 24 hours a day.

That's assuming that you kept it on MANUAL the whole time. When on manual,
the 93/95 goes to power save mode (undoc feature). Otherwise there's no
possible way you could go 72 hours straight.

Live streaming cam on runway 0624, Schiphol Airport plus ATV audio.

www.scannersplanet.com

Have fun

Be patient, a plug in has to be downloaded.

It takes a while for the plug in to show up, but it is worth the wait.

Good streaming requires a DSL or Cable connection.

This will sound a little weird.... maybe impossable, but it never hurts to ask.

The sheriff department here goes to DVP (sounds like white noise with a high pitch squeek at the tail of the transmission when they run it) ... I would like to see if I can hack that DVP. I have a few radios that are DVP capable so getting the proper equipment is not an issue. I just do not know a thing about DVP systems.

Questions i have are ...

How does every radio know what code the other is using so they can hear each other?

How can one determine what "code" they are using?

Is my idea even possable?

Someone with a little DVP knowlege please fill me in on the basics of DVP.

Thanks

Dave

I appreciate all of the help. I got a cable from blackbagsoftware and used Win95 from starsoft. I ran into a problem in that you should not touch any button on the scanner after hitting upload. This should be a lot easier to program now. Also, I was able to enter the other EDACS in separate banks. Now I will see how well I've learned how to operate it. Good reception in the Chicago area and now problems so far. Next problem is finding a Radio Shack with the Police Call book. None of them have it here in the south suburbs. Thanks again to all who had helpful ideas.

Ron

Not to argue with you, but I was scanning the whole time. I did keep the volume very low as I use the amp in the tape recorder to listen.

I have just set it up by it's self after a full charge. It is scanning with normal volum and I will let you know how long it lasts.

I had one a couple of years ago but returned it to Radio Shack within
their 30 day period. I thought the 150 memory channels were a little
small for my needs. Squelch tail is noted as a little long.

Its not a bad scanner. How much is he asking for it?

I have a 91. Listen to local PD every day. Reception fine, never had a problem with it other than that once in a while it takes a couple minutes to find the control channel.

Progaraaming isn't difficult if you RTFM. And be sure you have ALL of the trunking frequencies or you'll miss traffic.

Once programmed, you can put 50 channels you listen to most in five banks (PD bank 1, Fire bank 2...) and turn thm on-off as desired.

>What is your opinion of this handheld for
casual listening?<

I have one that I keep in my glove compartment to monitor a 30 channel Motorola trunk system. It does great for my purpose and seems to hear as well as my BC895XLT and Pro94a but my opinion could sway considerably depending on how much I had to pay for it. RM~

4917. Win93 instructions?????

I've have downloaded Win93, which looks like an excellent program. But like so many excellent shareware programs, I cannot find any documentation on using it! Win93 ain't workin'.

The first thing I tried was downloading from the radio to the computer. The computer is talking to the Pro-2053, but I get an error: "timeout waiting for header"
message from Win93. Do I have to change my serial port parameters, or what?

Hi Ron,

From what I gather the 2003 Police Call has been delayed. I've been
checking with Radio Shack regularly.

Hope you enjoy the Pro-95 as much as I do.

Ken,

I tried the four scanners in New York and they all work fine here.
I don't know why you have no audio?
I assume you installed realplayer.
Please try again.

If you can swallow down the cash, get ya an AR8200MKII. It allows you
to pick any step size from 50Hz to 999KHz and any mode from WFM, NFM,
SFM, WAM, AM, NAM, CW, LSB, LSB, no matter what the frequency you
listen to. Cell is blocked on the USA unit, but use some simple math
or brute force searching and you'll find it anyways via image.

"Scanner comes up with a download screen" does not indicate that the pc
and radio are communicating. You can plug a bare, not connected to
anything, plug into that jack, and the download screen will come up.
The radio is detecting that a plug has been inserted into the jack and
that the jack-switch has been opened.

Further, some working cables will have a relatively low pin-to-pin
resistance, and the download screen will not come up, but the cable
works, and upload/download operations will be correctly intiated by the
Win93 program.

Which cable are you using?

Walt

I'm using a home-made cable which is supposed to be 2-way, according to the designer. I have discovered I can upload OK.

I am wondering how to add a text tag to a conventional channel using Win93? It can be done using the Pro-2053 keypad, but can't find a way with the interface program.

They use a system called "Over the air rekeying" or something to that effect. Basically the radios all listen for the key sequence to be broadcast from the site controller. To properly receive the key, you must have the previous key loaded in at the time.

So unless you know a guy at your local PD willing to program your radio for you ONE TIME, you've got about a "one in several billion" chance of getting it right.

Now if you know the radio protocol in use, you theoretically can greatly increase your chances by capturing and descrambling just the frame preamble until it matches a valid preamble. There was a student in here a few years ago (when Winflex and MDT Monitor were new and freely available) that claimed to have a working APCO-25 decoder running... but he vanished when Bill Cheek got busted for his MDT decoder. Anyhow, he claimed DVP was breakable using a brute force method such as this - just a matter of time before your computer found the right match, he said. Again, speculation and rumor - this guy could've been more full of BS then a bandini bag, but that's what he posted here.

Best of luck, and if you do it, resist the temptation to share your triumph with us in here. Keep it to yourself - you post it in here and you'll risk having some unexpected guests paying you a visit....don't think that they can't or won't try to find you. That's what Bill thought.

OK gang, let's go easy on him - he's only asking for ADVICE for his FRIEND...

My advice is this. Notify the local PD that your so-called friend unwittingly coerced you into committing several felonies and in exchange for your testimony, you'd like full immunity. Then inform the MDA and advise them to file a class action defamation suit against your buddy and have yourself included in the settlement.

Take your money won in the settlement and buy a new friend (although $8.25, a pocket comb, a used wheelchair and a 1989 ford festiva will not get you very far - in fact I bet the lawyer will get the car).

LOL!!!!

On any of the "Channel" pages, the first column on the left has the
heading "Alpha Tag". A 'Text Tag' is another name for an 'Alpha Tag',
and vice versa.

Replace the text 'Bank 0 Ch 0', for example, with your desired 'Text
Tag' for that channel.

Agreed! If that's what he wants to sell it for, that's the price. Free enterprise capitalism at it's best! U go USPatriot!

Now, while we're on the subject I have a "gently used" (only dropped 2 or 3 dozen times) BC245 for sale at the low, low price of $499.99 - any takers? ;-)

I don't understand when you say they are communicating. Simply plugging in the cable puts the scanner in what appears to be the correct mode. The time out tells me you are not communicating. I did not intend to upset you, I was simply pointing out the obvious. Also click on the two boxes in the com selection, it won't hurt anything if you don't need them and may well solve the problem.

I think air was easy to add vco wise. 12.5kHz steps are already in software, for other bands, so I think they figure two 12.5 steps are easier then creating a 25kHz (or 8.33) step. Last item is I doubt there is much demand for the scanner outside of North America (so 8.33 will not be important to the customer). This all adds up to giving the customer something useable, for very little effort on GRE's part.

Here is a question for the group. Is there much use of Trunked radio systems outside of North America? I have seen the BC245XLT for sale in Australia.

Other than the Uniden folks and some "beta testers" around the country, nobody's gotten the radios to try yet. But no, they will not cover all of the digital signals currently in use. They will only decode "APCO P25" digital signals that are not encrypted, and will only do THAT when the optional (at $300 or so) BCi25D card is plugged into the scanner.

Speaking of scanners and available bands...

Yeah they are oriented toward certain bands but if weather and CB is on the radio, why can't RS put in FM and AM bands? Is there some FCC reason for this? I mean, it would be nice everyone once in a while to listen to talk radio on it as well as FM 'IF" there was some emergency broadcasting...

The FM broadcast band is included in several of the "standard" scanners; it's probably a no-brainer, as that band lies right adjacent to the VHF aircraft band, and not too far above VHF low band. The AM broadcast band is in some of the higher-end scanners, but I imagine the thing that works against it is that those freqs are so far below the rest of the "normal" scanning frequency ranges.

Ontario Unlisted Frequency Guide is dedicated to scanner radio hobbyists who are
frequency hunters. You will find lists of Ontario radio frequencies that are
not listed on any web page, published in any scanner book (Haruteq or Scantrix)
or listed in the government frequency list (Industry Canada's TAFL). This list
is all based on research and the patience of the people who contribute
to this web page. Yahoogroups: http://www.yahoogroups.com/group/oufg

No it cannot... And it would be pointless anyway since now most cellular
communications are digital.

I have one. It works very well on all the Motorola systems in my area. It
can't monitor more than one system at a time or trunked and conventional at
the same time. Nonetheless it is a good scanner for what its capabilities
are.

Hi
I want to build an antenna for my scanner for 300Mzh band (military aviation) What kind of antenna is better for that occasion,dipole, J-pole or something else?

Thanks

Yes, simply trade the pro-95 to me for my AOR-2002, I could use a second
PRO-95.

A simple ground plane will work great and is easy to make. If you need specifics let me know. The J-pole's low angle of radiation is a disadvantage when listening to aircraft. A couple of crossed loops would also work nicely.

4963. Attic antenna question - clone or split?

Newsgroup: rec.radio.scanner
Date: 2002-11-15 17:23:10 UTC
From: NightRunner <jackfrostnippin@yernose.com>
Message-ID: <giaatukbl3c48q6f7stnhdidv19o3gvmfk@4ax.com>
Source record: 41503

Hello all,

I built, some time ago, an attic wideband scanner antenna as an experiment to see if I could outdo my previous version. I am pleased to say that indeed the new version well outperforms the old one.

Now however, I have a problem. I use my scanner the most in one of two places; the bedroom and the computer. The old attic antenna runs via a length of RG-6 to the computer area. The new attic antenna runs via another length of RG-6 to the bedroom. The distance between the bedroom and computer area is about 30', and the cable coming out of the ceiling in the bedroom is just too short to make it to the computer area. I don't like the idea of adding more cable to lengthen it, thus cutting my sensitivity...

So here it is:

Should I simply construct an exact copy of the improved antenna design and put that on the computer area cable, or is there a way I can run both cables to the same antenna without experiencing a big drop in signal reach? Mind you, if I do run both cables to the same antenna, one of the two cables will be unterminated at any given moment. Would finding a way to terminate both cables, like say a load device or one of my other two scanners, help the situation? Will I find that interference from the two computers will greatly increase in bedroom scanning if I do the splitter method? Does it just make better sense to have two like antennas?

Greedy for opinions here... Any help greatly appreciated!

- NR

I bought one new a few years ago. Use it daily by the bedside to monitor our city's 5 channel trunking system, so as you can imagine it does a fairly good job doing at least that. Reception is great for a handheld. Can pick up NOAA weather stations 100 miles away on the stock antenna. I recently bought an Icom R2 thinking I'd replace the Pro 91 with it, but ended up returning it favoring the Pro 91.

I wouldn't pay more than $50 or so for a used Pro 91. I've seen the Pro 90, which was top of the line when the Pro 91 was second in line, selling for $75 used. Some Radio Shacks right now have a very fancy trunking handheld on closeout for $149 regular $249.

or....

you could buy a longer piece of coax that will reach both rooms.
Probably cheaper then building another antenna and another coax run.

Get a male and a female coax connector.
Cut a couple of coat hangers in to 5 pieces one will be 9 inches and the other four 9 1/4 inches.

Solder the 9" one in to the center of the male connector, then fill the area between the wire and the edge of the connector with epoxy to prevent shorting and adding mechanical stability. Set aside for later.

Get a piece of metal about 2" wide and 10" long in one end drill a hole to mount the female connector. Once test mounted bend the metal 90 degrees forming an L drill two holes in the bent side for mounting to a pole with screws.

On the connector there are four screw holes, we will shortly use those holes.

Next on the end of the four remaining pieces solder a screw terminal. put a screw through the terminal, the connector, the bracket, and put a lock washer on the other end. Repeat 3 more times. Adjust the 4 pieces so the are 90 degrees to each other. Next bend them down at a 45 degree angle. Drill two holes in the support mast and put a couple of screws with your choice of washers through the homemade bracket and through the mast.

Oops! Almost forgot, hook your coax to the bottom of the connector. Solder the center conductor and one more wire screw terminal to the braid. you can put the wire connector to any of the screws holding the female connector. Use tie wraps to take the strain off the coax and you might want to seal around the solder joint with some silicon to keep it from weathering.

You will probably be able to build it in less time that it took for me to write it.

Good luck and enjoy. Hope this was what you wanted.

Regards Fred W4JLE

You did not specify what freq. range you are interested in, disregarding H.F., I would simply put a standard TV splitter at the antenna and run 2 pieces of coax to their destinations.

You will lose 3dB at the splitter, if that is a concern simply put a pre amp at the antenna prior to the splitter. My guess is that it won't make any difference.

Thanks for the "alpha tag" info...that works. Too bad the program doesn't come with instructions. I tried clicking those two boxes; still get the error when trying to download. Maybe a cable problem. However, I can upload, so that's the main thing.

I'm going to be selling this Pro-2053 pretty soon anyway; I've bought a BC780XLT. So my next question for the newsgroup will be is the serial cable for the 780 wired straight-through or crossover? I have a db9 cable here which is wired straight-through. The scanner's in the mail, so won't be able to test this cable until it gets here. I'm concerned that hooking up the wrong cable might damage something.

I've got a BC780XLT on order, and am wondering if a cable I have here will work for the interface. It is a straight-through cable, that is pin 1 to pin 1, etc. (I think it came with a UPS). I am wondering whether the 780 cable requires a different wiring scheme.

Yes, the cable you have will work to control your scanner from your
computer, but you will need a NULL MODEM adapter if you plan to cloan
other scanners from yours.

You will love this scanner.

Hello:

Am pretty new at this.
Was wondering if someone might tell me what mode (AM, USB, ...,etc.) the following are:

High Altitude Gander at 384.5
Low Altitude Gander at 132.6

MWARA NAT - A at 3016

GHFS at 11175.0
GHFS at 6739.0

The Coast Guard Air stuff at 8993

Also, what are GHFS, and the MWARA transmissions?

Much thanks,
Bob

all military HF comms are in USB. hams, for historical reasons, use
LSB for 40-160, and USB for 20 and above.

That's because I want it all, muhuahaha! Actually, I use everything
from MW all the way to about 480MHz UHF with this antenna. At HF and
below it gives the scanner (an AR8200 MKII) a bit of a boost beyond
with just the active bar, and much above UHF the perfomance is better
with just the telescoping whip. Within this range, however, the
performance has really surprised me given that the antenna is for one,
in the attic, and for two, constructed basically from... well.. let's
just say it's a creative salvage special.

I have a couple of high frequency splitters laying about somewhere...
Perhaps tomorrow I will give em a try and see how it goes.

Thanks for the help!!

I don't think I would call it "historical" reasons as much as convenience. Early homebrew and some commercial rigs used a 5 MHz VFO and 9 MHz IF. By taking the sum from the mixer, one could get 14 MHz USB and by subtracting, 75M LSB.

MARS stations use LSB, but whether or not you could call that military
traffic is open for debate.

Do you mean for scanner use or HF use? Longwires and large dipoles work
great for HF, but as far as VHF/UHF is concerned, there are far better
antennas to use.

It's my understanding that since most cell phones are digital now,
there's very little to listen to in the cell band without a digital
scanner. Am I not correct? Besides, what's the big deal about
listening to cell phones? Listen to cordless phones - at least those
would be your neighbors and you'd find out a little bit about them! :)
Of course this is illegal and I'd never actual condone such a measure.

A fundamental piece of the 95's firmware would also have to be changed. The 95 stores all of its
frequencies as integral multiples of 250 Hz. That works just fine when the step sizes are 5.00,
6.25, 7.50, and 12.50 kHz, but would have to be changed if 8 1/3 kHz was used. Perhaps 250 Hz would
become something like 1000/3 Hz.

Now, if the scanner would accept *any* 250Hz frequency, then you'd only be off by (at most) 83 Hz if
the actual step size in use was 8 1/3 kHz. (i.e. actual frequencies would end in 333, 667, or 000 Hz
- we could program frequencies ending in 250, 750, and 000 Hz).

---> Here is my reply to what Tony wrote 11/16/02 1:16:10 PM

It's a good scanner, doesn't have military air band and doesn't do tone decode but a really good trunk or conventional scanner. They are on sale for $149.00 and that is a good price for a new one with warrenty. If you looking at used you don't want to go much above $90.00

What is a good antenna for this scanner? I have read that the rubber duckie antenna it comes with is not that good. I saw a telescoping antenna at Radio Shack but I am not sure it would do what I want. I am hoping to get an antenna that will improve a reception across the radios entire spectrum if that is possible. Once again I appreciate any feedback I get.

Thanks, Scott..

Hey, I think that guy was BS-ing me. It turns out that submersing the radio in salt water ruins it, it doesn't open up the cell frequencies. I guess I'm off to Radio Shack for another one...

No it doesn't you just didn't leave it submerged long enough, try it again and
this time weight it down with a rock for 1/2 or more

Lamar,
I used some TV guy wire at 6 inches
each.
Then put in 3 insulators and coax and made a cheap!!! diaploe.
I mostly work 2 meters with my scanner and this worked 440 also.
And works air band too.
BTW just for kicks I hooked it to my HTX 202 and from Oxnard Ca I
brought up Santa Barbra @147.0 with 1 watt.
good luck
PEACE
Dana

Hi Linda, dont let these goof balls get to you.
I went to Radio Shack and got a cell phone ant.
Then got an adaptor to couple to reciver to the ant.
I live in So Cal and we have a lot of 800/900 mhz radio to listen to.
Mine works great and spent about $10.00 on the whole thing.
PEACE
Dana

Hi Tom. Give this a go. It's very low budget and works very well. It should cover the bands you want.
I have included the e-mail as it was sent to me. Good luck. Chris Bailey (N.Z.)

"Is this just for the emergency services band or 75MHz to 480MHz

I have used an aerial which is quite broad band and out performed my expensive discone at the time.
Like all (smaller) broad band aerials it is a compromise but works quite well.

Use a TV aerial dipole insulator and mount on one side an 500mm x 10mm aluminium tube.
The other side fit a 1.3 metre x 10mm tube. Fit a coax via a TV aerial balun to this off-centre fed dipole and mount verticaly on a cross arm at least 1.3 metres away from the supporting mast.
I think the aerial would come under the name of "Windom". It has a high impedance at the feed point (that is the reason for the 4/1 balun. Other variations of size may be advantageous but the rule is that size if the large element must not be divisible by the smaller one.
The pix below may assist my poor description. I hope the characters stay where I put them.

Soaking in salt water may work but a faster way would be just 240 volts of
ac current into the pc plug for a few mins and reset and it will fix the
problem and recharge the batteries at the same time.

5021. New versions of Win93/95, opens some frequency ranges

Newsgroup: rec.radio.scanner
Date: 2002-11-17 00:00:24 UTC
From: don@starrsoft.com
Message-ID: <cqmdtu4utkkc826bk4h8ecu1cmoti3qqce@4ax.com>
Source record: 41460

The latest versions of Win93 (00.23) and Win95 (00.06) will allow you to enter frequencies that are
outside the many ranges normally available on these scanners. For example, you may enter frequencies
between 54 and 108 MHz, or between 225 and 406 MHz.

You may send any frequency from 5 kHz to 1.3 GHz, except cellular, to the scanner. While it will
tune to any of these frequencies, the radio's filtering will affect reception in some ranges. See
the programs' web pages for some test results (on a PRO-93) supplied by Bill Petrowsky.

For ranges below 406MHz, the step size is 5.00 kHz. For ranges above 406 MHz, the step size is 6.25
kHz.

http://www.starrsoft.com/freeware/win93/default.asp
http://www.starrsoft.com/freeware/win95/default.asp

The WinXX Data Converter program has also been modified to support the new ranges.

IMPORTANT NOTE: This does not open up cellular telephone frequency ranges.

-Don

5029. Win93 / extended receive

Newsgroup: rec.radio.scanner
Date: 2002-11-17 01:43:27 UTC
From: RN <RN@Nospam.net>
Message-ID: <ar6s8i$u6f$1@slb6.atl.mindspring.net>
Source record: 41468
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I wonder what the front end filter is in the 93/2053 and what it would take to change it so that the military air band would work better? Anyone have any ideas?

Also, Don, can you search the ranges as well? Tried a search range but when I uploaded to the scanner it said all channels were locked out and there was nothing in the scanner. Had to take the search range out to get it to work?

Great job

5030. Pro-95 question

Newsgroup: rec.radio.scanner
Date: 2002-11-17 01:45:10 UTC
From: d0011 <d0011@wwwoptonline.net>
Message-ID: <GwCB9.5661$I8.5359@news4.srv.hcvlny.cv.net>
Source record: 41469

I just bought a new Pro-95 scanner. I find it more sensitive than my Pro-92a. However, I noticed that when I go from a conventional bank to a trunking bank (Motorola II). The scanner hangs on the control channel. It does not happen always but is annoying when it does. Has anyone else experienced this?

Thanks,
Sal

5031. Re: DVP coded communications

Message-ID: <gCCB9.1694$fY3.161745@newsread2.prod.itd.earthlink.net>
Source record: 41470

Ehhhhh????? I know its illegal to transmit on frequencies that you are not licenced or "aproved for use". But monitoring and getting busted..... Hummm .... sounds a little fishy. Whats the details of how he got busted?

Its not like the person decoding the digital information is "stealing" a pay service....like hacking DSS or cable where they can get busted for stealing services. This stuff is like listening to them on the regular scanner.... you need a "special" piece of equipment ...(((a scanner))) to hear regular communications..... you need a special piece of equipment to hear coded communications ... (((a descrambler))) ..... what is the difference. The equipment is freely available anywhere. Heck, law enforcement / government have "hidden" frequencies - yet we find them..... whats the difference of finding their hidden coded key?

Now what i can see is motorola or some other mfg coming down on the individual. Typically they have discalmers that the software / firmware for the radios and equipment cannot be modified etc etc and you must have a licence to use the software etc .... now I can see them getting busted for hacking the warez. But decyphering what is freely floating through the air that is not a pay service - and not transmitting ilegally .... sounds like the law is a little bent or gray in that area.

The big what if .... what if someone would write their own software, not using ANYTHING of motorola's or any other mfg for decoding / programming purposes.... might be a little hard to do since theire are reverce-engineering clauses in the licences etc..... but if person decoding did not write the software, then that person cannot be held accountable. Like with decoding MDT traffic with a data slicer - obviiously that software is not even close to Motorola's or and other mfg..... the data slicer does not transmit. Where is the illegal point?

What am I not thinking of? Does anyone have legal statutes that they use to procicute?

Anyone have comments? Maybe we should move this to a new subject title as well so everyone can put their 2 sence in and/or learn .... WHY.

Dave

No, you can't use the extended ranges in SR5 (Limit Search). I don't know why you got an "all
channels locked out" message, unless you tried this with an otherwise blank P95 file.

Source record: 41473

What scanner would one need for just cordless monitoring in the 900Mhz digital?

Is there any mods needed for cracking the DSS as well?

I have to say I was not too impressed. It looks kind of cheap to me, and the audio wasn't too good at all. There werent any freqs programmed in that were digital, so I can't say how that works on it, and the woman that had it wasn't sure if it had the card in it or not, and I wasn't allowed to open it up, or punch any freqs into it. I had my Pro 93 with me, and it beat it, in sensitivity and clarity on every freq they both picked up.

I wouldn't buy one due to the battery pack nonsense anyway, but I was pretty dissapointed in it.

It is my understanding that 900mhz cordless are using simple pcm digital transmission. I have read in this newsgroup one could record the sound into a computer and play it back and it would be decoded. Many have had success but not me. I am only interested decoding my own 900mhz vtech phone for experimentation only. Your question as a hobbyist is a valid one but there many that believe in censoring knowledge and exchange of ideas one might disagree with. It is not illegal to listen to your own phone and finding out the means to do it.It may also be not illegal to listen in other countries. I had saved a post from the great kracula but I unable to find it. If anyone has the post regarding the pcm decoding of 900mhz please post it.

People who are/were in the hobby years ago were more discreet. If people who use common sense more often, the hobby would not get a black eye all the time in the press.

I just took the end of a piece of coax with the BNC still on it, trimmed it to 1/4wave (about 3.25 inches or so) from the end of the crimped part of the connector, then stripped off the jacket and made the shield into three twists of strands, bent down about 45 deg. Tinning the shield-twist radials made them somewhat stronger, and for such a short length, the center conductor can easily stand up on its own.

I've also made a few other elements for other bands that I can just tack solder on if I'm going to be using it for one band for a while.

You know, given all the time I spend in restaurants, movie theatres,
libraries, and other places trying *not* to hear other people's cell phone
conversation, I can't imagine wanting to buy an expensive piece of
equipment just to dedicate it to listening to that crap.

Anything worth listening to is digital anyway.

Hello all,

I may soon be in the market to buy a handheld counter like Optoelectronics makes. Once many years ago I owned (for a very brief time) a Radio Shack handheld counter, and decided very quickly that it was sh*t. Since those days I have often considered buying a good quality handheld counter for use in grabbing new scanner frequencies, and also as a transmitter testing device for my many RF projects.

I would like to spend no more than $450, and I want the best I can get for that money. I don't care about digital right now, as I won't be in the market for a digital scanner for a long time. My main interest is excellent sensitivity, and the ability to autostore captured frequencies to memory. I understand that the Opto Scout (non-digital version) fulfills this nicely, but can I do better yet and still keep under $450? Could I get substantially better sensitivity by going as high as $500 on some other model/company?

Whatever I finally settle on, it MUST be small enough to hide in a inner coat "shoplifter's" pocket so that I can grab freq's without attracting attention to myself.

Much thanks to anyone who can help!!!

- NR

The terrorists are winning. And they are winning because we are permitting them to. They are making us fear what sets us apart from others - our freedoms. We are trading our freedoms for security and are losing both.

May we wake up and reverse this slide to a police state before it's too late.

Be sure you have other things that may use the same port. (palm,
camera). Also, their are a lot of things that can't run with XP.

I'm Running Windows XP and ScanPro895XLT.

I've also tested the radio with other software and for some reason I
can't connect.

I have tested the cable and verified that pinout is correct.
I've even tried to connect to it using terminal services via Comm1
but with no luck.

The scanner is on RMT and I've verified that it is using 9600 buad.

I've even reset the scanner thinking that could be part of the problem

any ideas?

Honestly, this may not be your problem, but I'd just like to point out that your software of choice is garbage... I bought the software and cable deal off of eBay last year, and it is so bug ridden that it was unusable... Even after I downloaded an update off their website it was still junk.

I don't bother with the computer control part of my 895 any more, so I can't suggest any other software. I'm sure that someone else will be able to advise you in this field...

5077. Looking for Icom IC-R3 TV reception mod

Newsgroup: rec.radio.scanner
Date: 2002-11-19 00:32:36 UTC
From: Stan <swperk@earthlink.net>
Message-ID: <3DD98688.2B9EB594@earthlink.net>
Source record: 41417

Hello,

I purchased an Icom IC-R3 from Japan, figuring that the NTSC TV receive function would work with the US TV system. Although I can get sound and viewable pictures, the channel assignments are all wrong (i.e., my local channel 10 tunes in as channel 8 on the Icom, it's not quite on frequency, and most channels I can't get at all.)

Does anyone know of a way to tell the R3 to use the US channel assignments?

Thanks,
Stan

Try again. USC Title 18, Part I, Chapter 119, Sec 2511 explicitly
references any person who "intentionally intercepts, endeavors to intercept,
or procures any other person to intercept or endeavor to intercept, any
wire, oral, or electronic communication;" Do you see any exception when it

Jeff,

I am running Scanpro with my 895 on a XP machine and it runs fine. I had the same problem you are experiencing when I first fired it up. Found out, as Burr said, that my Palm sync software was accessing the same comm port as the scanner. I uninstalled the Palm software and it resolved the problem.

Good Luck,

Brad

Can anyone tell me what linux software is available for scanner
controls, especially for the PRO-2004?

5096. Single aerial with scanner & freq. counter

Newsgroup: rec.radio.scanner
Date: 2002-11-19 17:27:40 UTC
From: themadhouse22@hotmail.com
Message-ID: <b8cd1f98.0211190927.2dd008b3@posting.google.com>
Source record: 41436

Technical question...

Is there any problem running a scanner and frequency counter (in this case an AR8000 and Opto Scout) off the same aerial using a T piece etc. to split the signal.

I'm particularly interested if there are any sensitivity problems with the Scout due to sproggies etc. in the Scanner being transferred via the coax link.

Jim

Prolly because it does not have a factory supplied interface. It would be a great project. Linux is a do it yourself platform. You could get a bunch of ideas for the serial port and comms in general from Bill Cheek's books.

the only way is to get the computer cable
and the programming software

you can then choose from a number of preset countrys and shoot the result
over
to the radio on the next clone of the computer to the radio

take a look on the yahoo r75 group. you might be rewarded with a surprise in
its file's section

No, then anyone could write a program to open up the cell phone bands and
the product would be off the market in 24 hours.

Not much to it - just plug in crystals and it plays. You can get a manual at
http://www.bearcat1.com/manuals.htm

5109. Scanner or receiver?

Newsgroup: rec.radio.scanner
Date: 2002-11-20 01:16:48 UTC
From: Rogers PCS User <none@r.pcs.com>
Message-ID: <3DDAE1F7.4BE7D901@r.pcs.com>
Source record: 41349

I'm wanting to connect my PC to a radio to monitor one particular frequency.

The instructions I've been given say to use a "scanner" but I'm wondering if it maybe less expensive for me to go with a "receiver" set to the proper frequency. Since I'm really only interested in the one setting, I don't see why I'd need a scanner - unless the price of a scanner is about the same as a receiver.

Now if a receiver will work for me, what kind should I be looking for and how do I adjust it to get the frequency I want? I'm assuming I have to install a specific crystal or something. But since I have no idea what I'm doing, I may be way off base. I hope the people here who are knowledeable can help me learn what I need to in order to do this.

The other issue that may be a factor: the instructions I'm following talk about how scanners have a "discriminator" on the ear jack that is where you make the connection to the PC. Would a standard receiver have one too? Anyone have experince with connecting radios to PCs?

Thanks a bunch,
Maxx

Thanks everyone for the help! I used the Icom software to set the TV channel assignments, and they now work fine. Now I need to change the LW band step size from 9 kHz to 10 kHz. Will the Icom software do this as well? Their documentation seems a bit sparse, to say the least!

Regards,
Stan

If you're trying to decode digital transmissions, the audio output from the earphone jack is usually filtered in such a way that higher bandwidth digital information can be distorted or undecodable (this is because the audio from that source is intended for human listening, and if it were not filtered properly, it would be too harsh). For this reason, a "discriminator tap" is usually required, and is not usually available on most consumer-level scanners without opening them up and tapping into a pin on a chip inside. The discriminator is a circuit that provides the "baseband" signal (the component of the radio transmission that contains the information) after demodulation of an FM signal before it is filtered by the audio amplifier for the speaker or earphone. The output of the discriminator BEFORE audio filtering is what has to get decoded by the PC. Some higher end receivers provide this output, but most likely those receivers will be more expensive and will provide a very wide range of coverage since that tends to be more desirable for those that buy that sort of equipment.

Many lower priced scanners can be modified to obtain the discriminator output directly. For many models, that information is online, and can be found with a little bit of searching. However may require a little bit of electronics knowledge (but not necessarily--if you're patient and follow directions well...provided the directions are detailed enough).

It will also depend on what frequency you are attempting to monitor as to how easy it is to get a receiver. Check out Ramsey Electronics (www.ramseyelectronics.com) for receiver kits that you might be able to use.

HB-232 can put a db9 connector on the back of the scanner if you opt for the outboard method of install. However, I am not sure if it is a "standard" com port. It is very well documented in his book "Ultimate Scanner".

Mike

Speech Inversion (Donald Duck sounding speech) is accomplished by mixing the speech spectrum
(typically 300-3000 Hz) with a tone (commonly 3500 Hz) to produce some audio frequencies (3800-6500 Hz) then filtering to 3200-500 Hz constituting the speech inversion.

I read in the paper last night that thanks to our congresscritters, the feds now have unprecedented powers to wiretap anyone they want whenever they want. All they have to do is "suspect you" of being a terrorist. No more warrants - just an educated "we think so-and-so is a possible threat." They even have a fancy new computer network that allows them to identify "threats" and act on them in mere moments. That's right gang, if you crack the right joke in front of the wrong person, your next phone conversation just might be taped for prosperity by your local FBI field office. Neat huh?

Well gee whiz, Mr, Wizard. As if that's not enough, these geniuses also approved stretching the debt ridden federal budget even more to hire THOUSANDS of people to man the monitors.

Amazing. You tell me what would happen if I monitored a "terrorist" on their cell phone and reported it to someone.... yet that's exactly what the government is allowing ITSELF to do.

Pot, meet Kettle.

That's because the people want it that way. If they didn't,
they wouldn't vote people in who want to do that sort of thing.
Despite what is happening, I predict that most of the
congresscritters as you call them will be reelected the next
time around.

Like the raise they just received?

> That's right gang, if you crack the right joke in front

I doubt it. You're smarter than a wooden post.

> I may be way off, but when was the last time you voted?

Why do you ask? Does it really matter if I did or didn't? If it did who
would the president be right now? Hmmmmmmmmmm.

I was right with you until you went "Rock the Vote" on me. Then you just
became like everyone else - dull, mindless, passive, trusting and naiive. Oh
well. When we become the Socialist States of America you can thank your
fellow Americans.

Hi there,

I have written a small control program for the AOR AR8600
communications receiver. It offers some nice things like memory
display in a table, squelch controlled logfile generation, audio
recording and a high resolution bandsope. From the bandscope you
can tune your scanner to a found frequency by simply clicking
on it.

The program is called "Ar86ctrl". It's available for free
(full version, no demo, no nags)at my homepage:

http://www.an-netz.de/home/kbo/

Should run on any 32-bit Windows (no 3.1).
It also supports the new "Mark II" version of the receiver.

Take a look there if you are interested. Would be nice to find
some comments on the software in these newsgroups.

ciao
Klaus

There aint nothing on that Hard drive that a
electric drill / metal drill bit will not solve.

Remove Hard drive,run that old slow hard drive through with
about 20 - 30+ holes with that electric drill / metal bit, discard
remains in an enviromentaly safe way.

You know you always wanted that bigger,faster Hard driver,and a new
electric drill,for x-mas,will solve all thoose awful email from
the in-laws.
Plus it gets rid of all that awful software you wish was never
installed in the first place.
Gives you a chance to plug in more memory,and other hardware
upgrades,and a chance to blow out the dust,while the case is open.
Really paranoid?,multiply the 20-30+ holes by your paranoid index.#
lol.

The BC-780xlt, Pro-2067, Pro-92, and Uniden 785D/250D that will be
released in January are all able to TT VHF.

there is no way to change the step size in the AM broadcast band
your basicly stuck with it. (you should have imported one from canada)

there is a trick to navigating the FM brodcast band which you will find is
mostly
locked out on a japanese model. hold the function key as you tune thru the
FB BCB

if anyone has a better suggestion please let me know about it as well!

>wisely, chose not to release that 'feature' ?

The scanner rejects any attempt to program a cell frequency. That's
built into the CPU's firmware.

Don has found that the PRO-93's CPU is not blocked against other
frequencies. The beneift of this discovery is a bit limited because
the filters greatly reduce the sensitivity when you get much away from
the advertised frequency bands.

Now we need someone who knows how to modify the filters. ;-)

FWIW, the PRO-92's programming rejects any frequency not within the
advertised bands.

Digital hardware puts a real crimp on creativity. :-)

5133. Scanner in car with factory antenna

Newsgroup: rec.radio.scanner
Date: 2002-11-21 08:03:35 UTC
From: bolt thrower <tucansam@whodis.org>
Message-ID: <ari40ndmp1@reader1.panix.com>
Source record: 41373

Hi gang.

I would like to put my scanner in my car but I want to use the stock AM/FM antenna. I am not quite ready to put in an aftermarket antenna, and am not interested in mag-mounts/window mounts/etc.

I would like to use an antenna splitter to connect both my scanner and my AM/FM radio to the stock antenna. I imagine I will need a pre-amp to nip any signal loss in the bud.

My problem is that I don't know what to look for in terms of a pre-amp, or where to even begin looking. My scanner covers up through 1300mhz and I'd like to not have any loss in the scanner's reception or that of the AM/FM radio.

Can anyone recommend a splitter/pre-amp combo for my application, or perhaps a single unit that does both (a powered splitter?)

Thanks.

You can program the right paramaters in with the software for vhf trunking but when trying to track it flickers on 800 mhz frquencies only. Vhf trunking isn't advertised as a feature of the Pro 95 so guess trying was hopeful wishing. Really too bad its a pretty good scanner at the sale price.

I just bought one from Universal and I am very happy with it. I have no degradation of the AM/FM signal and the scanner feed goes to two scanners in the truck. The scanner performance is far superior to the glass mount I had especially on VHF which is what most factory antennas are cut for anyhow. Here is the one I got.

Hello:

New at this.

I have the following frequencies for the local police:

39. MHz
123.
156.
867.

What mode(s) are these likely to be ?
fm ?

For all of them ?

Thanks,
Bob

Not true, with butel's ARC3 you can change the step from 9 to 10 in MW
range. As far as I know only ARC3 can do this.

39, 156, and 867 will be either FM or NFM, depending upon how your
particular scanner labels it.

123 is an Aircraft, not Police, frequency, and will be AM.

123.xxx in the US would most likely be AM mode. It's in the aircraft
bandplan. The rest, FM.

I had a splitter that was bought at Radio shack. The AM/FM antenna is not really for scanner reception, especially if you are in a big city. Really the only thing that i found the splitter to do was "not advertise" that a scanner was installed in the car. Cops here in Fl do know what a scanner ant looks like, as mobile scanning is illegal here

Do the FL cops really worry about scanners? I know it's a "big deal" in Michigan. Guess I'm lucky to live in California, where the police don't get all sick and nervous about them. In the 30+ years I've been scanning, I've been stopped by the police perhaps a dozen times while I've had a scanner in the car... usually mounted under the dash and plainly visible. Only twice has anything even been said, and both times it was a casual question/answer thing .. I got my tickets (once for coasting thru a stop sign and once for expired tags, "guilty, your honor") and went on my way. From what I've read online, in some parts of the country having a scanner under the dash is just about as bad as having a dead body in the trunk. And MUCH worse than having a firearm.

Harry

Except for not being able to find a way to label talkgroup lists, I think it's great...and it's free. I was going to make a donation if I could figure that out, but the author hasn't responded to emails. If they get beyond a beta version, it may not be free then.

5160. Assistance with 'Jamming Scenario'

Newsgroup: rec.radio.scanner
Date: 2002-11-22 22:07:15 UTC
From: och@cybercomm.net
Message-ID: <5046a8e8.0211221407.6a4c3cae@posting.google.com>
Source record: 41300
Cross-posted to: rec.radio.scanner,rec.radio.shortwave

First of all, I would like to say that I know relatively *nothing*
about jamming radio frequencies, nor am I an electronics expert. I
spent much of last night and most of today reading through these two
newsgroups reading about radio frequency jamming, but I realize that I
could spend weeks reading through articles and still not know as much
as the experts seem to know in these groups. This is why I am
posting, and asking for your help.

Some background:
I am a playtester for a somewhat 'real-life' RPG system called
Midnight. (http://www.midnightd20.com) We came across a scenario
where people were using a specific type of hand-held radio and we knew
the transmit frequency. My suggestion was to build an ECM of sorts -
turn the unit on, they no longer communicate, we wipe them out.
Simple. However, since this is a relatively new game, there are no
rules to do this, and we (the group) have no idea how to make
something like this 'life-like'.

I know that most of you probably will read over this post and ignore
it, however, I am asking for your assistance because I truly know
nothing about this and I would like some basic information as to how I
might be able to create rules for this sort of thing.

If any of you can help with any information at all, I would very much
appreciate your time and effort.

Examples I am looking for:
Use of a Marine battery (say, 9600kW... 12V * 800A) as a power source
Use of alkaline batteries (say, 4 D batteries) as a power source
Use of different types of antennas
Jamming AM/FM, computer equipment (like laptops), consumer
electronics, wireless networks, that sort of thing.

I know that this may take some time and effort on your part, but
believe me, any assistance I can get on this matter would be GREATLY
appreciated.

Massimo

Hello,

Andy's correct. The ARC3 software changed the step size to 10 kHz (as well as setting up the TV channels for the US bandplan). In fact, now I can switch my IC-R3 back and forth between 9 kHz and 10 kHz spacing on the BC band, a mod that cannot be done on the US/Canada versions (they're restricted to 10 kHz spacing only).

Regards,
Stan

Sure if you want to melt down the transmitter, unless you spend $50,000
or more for a commercial transmitter.

> Use of alkaline batteries (say, 4 D batteries) as a power source
> Use of different types of antennas
> Jamming AM/FM, computer equipment (like laptops), consumer

Well AM/FM commercial radio stations run thousands of watts. You would
need a high power transmitter to jam those signals. Jamming consumer
equipment that operates at low power would be very easy. You could just set
up a 10 watt transmitter in the area.

> electronics, wireless networks, that sort of thing.
>
> I know that this may take some time and effort on your part, but
> believe me, any assistance I can get on this matter would be GREATLY
> appreciated.
>
> Massimo

Any battery use would make the jamming ineffective because after a
short time the batteries would drain.

Let's say I want to jam WI-FI networks in a neighborhood, I could just set up
a transmitter in the neighborhood and have it continuously transmit. It still
won't jam all the signals because equipment in very close proximity to each
other will be strong enough to overcome the jamming.

Now the other team could have spectrum analyzers to find out if there is a jamming
signal on their frequency and it would be easy to track down.

Note that the policy refers to filming "within the accident scene". The authorities have every right to control activities "within the scene" itself. This cannot (and does not appear
to attempt to) include any area within sight of the accident - just within the perimeter of the
cordoned off scene itself. I'll suggest that the PD can make this one stick. Don't quit your
day job in hopes of becoming a constitutional lawyer

Hi,

I'm new to the group but have been an amateur radio operator since the mid 70's. (WD4DPD now KD0XX) I have had several scanners in the past and have a couple now but I want a much better unit. I am looking at the following BASE receivers....

AOR AR 8600 II,

ICOM PCR1000,

YEASU VR 5000.

If you have one of these, or have another option, please write and tell me what you like or dislike about your current radio. The ICOM is interesting but kind of limited in what I want. I would like to have front panel control since the scanner will be near my bed. I want to remote locate the receiver in the bedroom upstairs and also be able to control and listen from the computer downstairs. I'm not really up on the computer control aspect. Do any of them have the audio on the computer control port or will I have to run an extra wire for that?

Whatever I do purchase will probably be with me for a LOOONG time so I will get a full coverage export version of whichever radio I settle on.

My requirements are...

1. Computer control and programming

2. 500+ memories

3. Reasonable scan speed

4. VFO control

5. Baseband audio output for digital decoding or at least modifiable for such.

6. Allmode (SSB, CW, AM, NFM, WFM)

7. Variable tuning rate at least down to 50hz

8. Variable selectivity.

My wants are...

1. DC-Light coverage:-))

*I'm a little flexible here but want at least 100khz-1300mhz

2. Digital Module availability for APCO 25

*It's here so I might as well have the capability.

3. 10.7MHz i.f. output

*Might need it someday

4. IR remote controllable

*Just because it's there:-)

That's about all I can think of. ANY SUGGESTIONS OR RECOMMENDATIONS??

Please send to jrc@naxs.com

Thanks,

James

Amateur Radio Newsline™ Report 1318 – November 15, 2002

Amateur Radio Newsline report number 1318 with a release date of Friday, November 15, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Ham radio is a lifeline after tornadoes hit on Sunday November 10th. Find out the details on Amateur Radio Newsline report number 1318 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: HAM RADIO AND THE NOVEMBER 10th TORNADOES

Ham radio is called out after a series of tornadoes hit in several states east of the Continental divide. Thirty-five are confirmed dead. Damage is in the tens of millions. And ham radio becomes a life-line when all other communications fail. We start our coverage with Amateur Radio Newsline's David Black, KB4KCH, in our South-East bureau not far from one of the areas hardest hit:
--

For Alabama, the night of November 10th is one for the record books. The small town of Carbon Hill was devastated. Ten people were killed there, and damage was extensive following two tornadoes--one of them, an F3 that cut a path of destruction measuring 46 miles. In all, 12 people died in Alabama.

Two counties away from Carbon Hill, amateur radio operators were on duty at the Weather Service's Birmingham Forecast Office, where forecasters were issuing a total of 46 Tornado Warnings. The ham radio group that works with the Weather Service is called the Alabama Emergency Response Team, or ALERT. Chuck Arthur, KF4SSX, is ALERT's President:

--
Arthur: "It was very busy. We had four of our members down there from 4 p.m. until after 2 a.m. and we were busy the entire time we were down there"
--

At one point, more than half a dozen Alabama counties--stretching from eastern Tennessee to eastern Mississippi--were all under Tornado Warnings at the same time.

--
Arthur: "We are able to talk to all of the different storm-spotter nets across North Alabama and of coarse the National Weather Service coverage area and receive reports of damage, tornado touch-downs, hail and all of the important pertinent things that the Weather Service is interested in"

--

Arthur says emergency communications were conducted on VHF and UHF frequencies:

--
Arthur: “The storms came in from the South-West and moved all the way up through the North-East corner of the state three or four times in a row. We had multiple counties under tornado warnings at the same time so it makes it very busy”
--

To the north, Tennessee was slammed hard by killer twisters, too. 17 deaths were reported statewide, making the outbreak one of Tennessee's deadliest. President Bush declared 16 Tennessee counties disaster areas. From Louisiana to Pennsylvania, 88 tornadoes were reported.

Another community hit hard was Van Wert, a town in western Ohio. Fred Vobbe, W8HDU, of the DX Audio Service is in nearby Lima Ohio has that part of the story.

--
NOTE: DAVE BLACK TOSSES TO FRED VOBBE IN OHIO
--

Sunday was cool and quiet, but when storms racing across Indiana quickly it heated up the amateur community in Van Wert, Ohio. The call for amateur assistance came as Van Wert Ohio E.M.A. Director Rick McCoy, operating the Van Wert Amateur Radio Club's W8FY, alerted hams to an approaching storm.

The storm spawned one tornado in the community of Berne, Indiana, but by the time the storm arrived in Van Wert there were reports of as many as four separate funnels.

Listening to ham traffic on the 146.850 repeater and public service channels was like listening to an attack from enemy. Call after call relayed the fact that there were tornadoes on the ground. Homes, businesses, and even a large power feeder tower buckled and fell to the ground as the winds from the F4 tornadoes tore up the once pristine countryside.

The initial storm spotters tracked the storm system as it entered Van Wert county, and then exited into Putnam County where it then hit Continental, Ohio. Later the storm touched down again in Huron and Sandusky Counties on the south shore of Lake Erie.

At one point a ham radio operator solemnly reported assistance as he came across a fatal. Hams assisted in pulling people out of homes that were flattened. Four people died, two in Putnam, and two in Van Wert County. The death toll in west central Ohio could have been higher had spotters, and the Van Wert County E.M.A., not worked cooperatively together. Hams reported to the Van Wert E.M.A. and an alert system used by the county which warned a group of school kids who escaped from a theater just seconds before it was reduced to rubble, leaving a small Toyota in row one. Citizens had as much as 28 minutes to prepare for the storm due to the efforts of hams

Ham involvement did not stop with spotting. Again, working with the Van Wert County E.M.A., hams assisted in damage assessment, helped in local shelters, located downed power lines, kept traffic and the curious out of devastated areas, and assisted police, fire, and EMTS operators with communications. Some hams stayed through the night manning communication centers, which helped authorities concentrate on the task of finding the missing, and assessing the damage.

The storm was compared to the April 3rd, 1974, tornado in Xenia, Ohio, where 33 lost their lives. Had it not been for ham radio operators working closely with authorities the death toll in Van Wert and Putnam would have been much higher.

In west central Ohio, I'm Fred Vobbe, W8HDU, reporting for Newsline
--

You can see some of the damage from the storm at Fred's web site, www.vobbe.net/weather.

And one last thought: The tornadoes of November 11th are another reminder of the way a disaster can occur at any place and at any time. And when there is no other way to communicate ham radio is always ready to step in. (ARNewsline™)

**

RADIO HORROR: AMATEUR OPERATOR MURDERED IN GAMBIA

A United Kingdom ham has been killed while on vacation. And as Jeramy Boot, G4NJH, tells us, it appears as if he was the victim of a rather violent crime.

--
Ron Ford, G3NKO, has been murdered while visiting the Gambia. Ron, from Waterlooville in Hampshire, had built his own holiday accommodation in the Gambia, from where he operated as C56RF.

His body was found at the end of October and has been brought home for burial. It is thought that Ron was the victim of a robbery and the circumstances of the murder are now being investigated by officers of the Metropolitan Police.

Ron was an active member of the Royal Signals Amateur Radio Society, and was a regular check-in on the RSARS international net on 20-meters SSB from the Gambia. He had also held a number of other DX calls, including MP4BFH in Bahrain, MP4TBV from theTrucial States, VS2FN in Malaya and VS9AFR from Aden.

Jeramy Boot, G4NJH.
--

As we go to air there has been no word from Gambian officials on where its investigation of this crime is leading. (GB2RS)

**

RADIO SECURITY: BE CAREFUL WHAT YOU SAY ON THE AIR

Use discretion an the air and help defeat the terrorists. That’s the sub title of Bill Sexton’s MARS column appearing in the December issue of

Worldradio Magazine. And in it, Sexton, who holds the call N1IN says that American’s now face a new concern over the indiscreet transmission of material that my seem harmless but which could be used against us by a terrorist enemy.

By way of example, Sexton cites the well published airline schedules that were used by al-Queda terrorists to coordinate their September 11th attacks on New York and Washington. This is material still available on every airlines website.

Sexton says that we all must all be concerned with what the military calls Operational Security or OPSEC. And he indicates that it is very important for hams to consider what they are saying on the air because you can never tell who listening in. And he says that even the most seemingly innocuous tidbits of information, monitored by hostile ears are probably being handed on to the enemy’s intelligence analysts in the hope it will reveal some weakness or secret that can be used against us.

Sexton covers quite a bit about domestic security and how you can do your part. You will find it beginning on page 50 of the December issue of Worldradio Magazine. More information is on the web at www.wr6wr.com. (Worldradio)

SPECTRUM POLICY: FCC CHAIRMAN WANTS TO REVAMP THE NATIONS RF AIRWAVES

The government's top communications regulator wants to revamp the nation's current policy on use of the public the airwaves. Bill Pasternak, WA6ITF, has the details:

--
Federal Communications Commission Chairman Michael Powell says that he rejects the notion that there is not enough spectrum to go around for those who want it. And the FCC leader is proposing an almost total overhaul of the nations telecommunications policy involving radio frequencies used for everything from television broadcasts to wireless Internet devices and everything in-between.

Powell says he hopes technology and new FCC policies will take advantage of all empty and underused spectrum, possibly by using time sharing techniques. He says that recent tests conducted by his agency in five major U-S cities show that there are many under utilized spectral parcels available for sharing. This is especially true when some frequencies are used only at certain times of the day and are otherwise left empty.

What is evident is that the FCC is looking at ways to better utilize every hertz from D-C to light and beyond. And if a mandatory sharing of most spectrum is put in place there’s a good chance that all hobby and personal radio -- including ham radio -- will be sharing in some future yet to be established all-digital domain.

For the Amateur Radio Newsline, Bill Pasternak, WA6ITF.

--

The frequency bands referred to by Chairman Powell were not detailed in the news release. (Various FCC and other news releases)

**

SPECTRUM POLICY: AUSTRALIA ISSUES PAPER ON SPECTRUM USE

The United States is not the only place where spectrum use and bandspace is an issue. It’s also under study in Australia where Q-News Trevor Tague, VK4BAT, tells us what the Australian Communications Agency is doing:

--
The ACA has prepared a Discussion Paper outlining a range of issues relating to the operation of spectrum licensing and posing some questions for discussion.

The paper does not attempt to present the ACA's assessment of these issues but rather aims to provide a starting point for industry debate about the effectiveness of the spectrum licensing concept in the light of experience since its implementation in Australia some five years ago.

Trevor Tague, VK4BAT, reporting for Q-News.
--

The Australian Communications Agency is soliciting input on this matter from the citizens of V-K. (Q-News)

HAM RADIO EDUCATION: THE BIG PROJECT KEEPS GETTING BIGGER

Back here in the United States, the December issue of QST will feature an article on the American Radio Relay League’s Education and Technology program better known as “The Big Project”. And, according to an Internet posting to QRZed dot com by League President Jim Haynie, W5JBP, the program which got off the ground late last year grew to 26 schools in 2002.

When President Haynie proposed this project to the League’s Board of Directors, he said that it should be funded by donations, not dues. That’s exactly what has happened and he now says that he is gratified at the results to date.

W5JBP says that the Amateur Radio community has sent a loud and strong message that this is something that they want. He adds -- and we quote: “I, and the entire ARRL organization want to thank you for that support.”

At least 14 more schools are lined up to join the Big Project in 2003. The full text of Jim Hayne’s posting is at www.qrz.com. (Adapted from QRZ.COM)

ENFORCEMENT: WASHINGTON LAW NAILS SPAMMER

An Oregon man was ordered to pay nearly $100,000 in the first case brought under Washington state’s tough law against "spam" e-mails. Attorney General Christine Gregoire's office estimates that 28 year old Jason Heckel of Salem, sent as many as 20,000 unsolicited e-mails to Washington residents in 1998, trying to sell a $39.95 booklet called "How to Profit from the Internet."

The case was the first brought after the Legislature banned commercial e-mail with misleading information in the subject line, invalid reply addresses or disguised paths of transmission. Judge Douglass North ordered Heckel to pay a $2,000 fine and more than $94,000 in legal fees.

Heckel didn't appear in court. His lawyer Dale Crandall said he plans to appeal, Crandall says that state anti-spam laws violate the U.S. Constitution's protection of interstate commerce. (Published news reports)

**

ENFORCEMENT: OHIO HAM AGREES TO VOLUNTARY SUSPENSION

An Ohio ham has agreed to a voluntary one year suspension of his operating privileges. This after the FCC accused him of interfering with a Cincinnati area repeater system. The FCC’s Daryl Duckworth, NN0W, explains:

--
Duckworth: “The Enfocement Bureau, by agreement, imposed a one year suspension on Gary R. Weiler, KI8DI, for interference to the K8CLA repeater system in Cincinnatti. The interference occurred in March.”
--

Back in September the FCC sent Weiler a Warning Notice that alleged on several occasions he had deliberately interfered with the K8CLA repeater. That system is operated by the Cincinnati Amateur Radio Club which the FCC says assisted in tracing the interference to Weiler. By agreeing to the one year suspension Weiler avoided harsher enforcement action that could have included a hefty fine and the possible revocation of his amateur license. (FCC)

**

REPEATER COORDINATION: METROCOR SAYS COORDINATION IS BACK IN NNJ-NYC-LI

Repeater coordination appears to have returned in and around the New York City area appears. This with word that MetroCor has issued its first coordination documents on October 24th to repeater systems that have had no changes from their prior coordination.

This marks the first time for any organization to issue any coordination documents within the area since the collapse of the Tri-State Amateur Repeater Council several years ago. All repeaters in the New York City, Northern New Jersey and Long Island New York areas are being asked to file with MetroCor by

December 1st so that it can meet the submission date deadlines of the various repeater directories.

More information and necessary documents are in cyberspace at www.qsl.net/metrocor. (MetroCor)

**

RADIO LAW: COURT STRIKES DOWN DESCRIPTIVE VIDEO FOR THE BLIND

Bad news for the visually impaired. A Federal appeals court says that the FCC overstepped its authority in ordering broadcaster to provide descriptive video to accommodate the blind. Amateur Radio Newsline's Bruce Tennant, K6PZW, reports:

--
On Friday, November 8th the U.S. Court of Appeals for the District of Columbia Circuit threw out Federal Communications Commission rules requiring television programs to include these oral descriptions of the action on the screen. In rendering its decision, the court said that Congress did not give the FCC the power to order the creation of this service.

The court maintained that Congress only authorized and ordered the commission to produce a report on how best to accommodate the needs of the visually impaired. Nothing more and nothing less. And that it definitely did not direct the agency to create a federal mandate that a descriptive audio service be made mandatory.

Under video description, a narrator describes the action during natural pauses between dialogue. The description is available on the secondary or SAP audio channel which is usually used for second language broadcasting.

The Motion Picture Association of America had challenged the rules in court. It claimed that the FCC was not authorized to issue them. Now, the U.S. Court of Appeals for the District of Columbia Circuit says that it agrees.

For the Amateur Radio Newsline, I'm, Bruce Tennant, K6PZW, in Los Angeles.
--

Blind advocacy groups are criticizing the court decision. They say its a setback for those who are visually impaired. (Published reports)

HAM RADIO BUSINESS: KENWOOD TO RESTRUCTURE

Some big changes at a company considered one of ham radios “big three. Ken Butler, W1NNR, tells about the news coming from Kenwood:

--
Kenwood Corporation is merging five U.S. based subsidiaries. As part of the restructuring, Kenwood will combine home and car audio marketer Kenwood U-S-A, its repair company Kenwood Service, Kenwood Communications and Kenwood Systems with their parent Kenwood Americas. The merged entity will simply be called Kenwood.

As part of the merger, Kenwood will expand its U.S. based home and car audio engineering team. The communications business which includes Amateur Radio products will continue to maintain its own sales and marketing staff. The consolidation won't shut down any offices or warehouses and the company plans to add people in an engineering capacity.

Ken Butler, W1NNR.
--

The changes here in the United States are a are part of a total Kenwood corporate restructuring announced earlier this year. (ARNewsline™ from press release)

OUR HERITAGE: KFBK AT AGE 80

Former Amateur Radio Newsline reporter Ross Du Clair, WA6VWY, passes along word that Sacramento California radio station has made history. This, as KFBK-AM 1530 celebrates its 80th birthday this month.

Ross is the Chief Engineer for several stations including KFBK. He says that his station began as the broadcast arm of McClatchy Newspapers in February of 1922. McClatchy is best known as the publisher of the Sacramento Bee.

Today KFBK is owned by Clear Channel Communications, of Austin, Texas. Over the years, KFBK engineers contributed many innovations to the radio broadcast industry. This includes the creation of the Ampliphase Modulation system adopted by RCA.

The station officially celebrated its "birthday" Friday 8 November 2002 at the Sacramento Hyatt Regency. The legendary Rush Limbaugh was to be the guest of honor. Limbaugh began his meteoric rise in talk radio from the studios of KFBK. (WA6VWY)

**

HAM RADIO IN SPACE: ISS EXPEDITION 6 ARE ALL HAMS

The new ISS Expedition 6 crew are all of licensed radio amateurs. They are U-S Astronauts Ken Bowersox KD5JBP and Don Pettit KD5MDT. Leading the team is Russian Cosmonaut Nikolai Budarin R-V3FB.

The launch of Space Shuttle Endeavour was planned for November 11th. It was halted only minutes before liftoff when a small oxygen leak was detected. A new launch date is tentatively set for Monday November 18th.

The STS-113 flight of Space Shuttle Endeavour is scheduled as an 11-day mission. During the seven days the shuttle will be docked to the Station, three spacewalks will be performed in addition to delivering the new crew. (AMSAT)

**

HAM RADIO IN SPACE: THE LEONID METEORS ARE COMING

Sky & Telescope magazine reports the Leonid meteor shower is due to sweep across Earth during the early morning hours of Tuesday, November 19th. If the weather is clear, we could be in for a grand celestial show. And many meteor scatter enthusiasts are expected to be on the air attempting to make contact by bounding signals off the ionized meteor tails as they burn up in the planets atmosphere. (Various sources)

**

INTERNATIONAL - CANADA: RAC VP RESIGNS

Radio Amateurs of Canada has announced the resignation of is First Vice President Joe MacPherson. MacPherson cited irreconcilable interpersonal differences with some members of the Board of Directors as the reason for his reason to stand down from the RAC Executive. A replacement for MacPherson will be named within next few weeks. (RAC)

**

CONTESTS

Turning to the contest calendar, word that the Bulgarian L Z DX contest begins at 12:00 U-T-C on Saturday November 16th and runs for 24 hours. This is a C-W only event taking place on 80 through 10 meters. The approved contest exchange is an R-S-T report and your I-T-U Zone. (GB2RS)

**

DX

In D-X, word that OH0Z on Aland Island will be active during the November 23rd to the 24th CQ WW CW Contest. He will be operating in the single operator, all band category. QSLs via Ari Korhonen, OH5DX, at his callbook address. (GB2RS)

And KX7YT is active on 10, 15 and 20 meters SSB and PSK31 as S-21-Y-V from Bangladesh. He will be there through the 4th of December. Q-S-L this one as directed on the air. (Modern DX)

Higher in frequency, the GB3VHF 144 MHz propagation beacon was removed from service on November 2nd for maintenance and was expected to be for one week. (RSGB)

And the GB3BUX 50 MHz beacon has suffered antenna damage due to storms a couple of weekends ago. It is currently running at reduced capability as a result. Its sponsor says that repairs will be made as time and weather conditions permit. (RSGB)

**

THAT FINAL ITEM: FCC HONORS WORLD WAR II COMANCHE CODE TALKERS

About a year ago Amateur Radio Newsline told you about a very special group of Native Americans who’s linguistic ability made battlefield communications secure during World War II. Now, the Federal Communications Commission has taken the time to honor this group for id dedication to our nation. Amateur Radio Newsline’s Norm Seeley, KI7UP, has the rest of the story:

--
The Comanche Code Talkers were members of a specialized communications unit of the U.S. Army 4th Signal Corps. And using their ancestral Comanche language they created an unbreakable code used by Allied Forces on the battlefields of Europe. Now, decades later our own Federal Communications Commission has paused to honor this group of Native Americans for their meritorious service to our nation.

Charles Chibitty of Tulsa, Oklahoma was the FCC's guest of honor at the recent ceremony. He told how he and 16 other young men, who had grown up together and were all members of the Comanche Tribe of Oklahoma, used the Comanche language and their Army communications skills to create a military intelligence code that was never broken by the enemy.

Even more interesting, Chibitty also shared anecdotes from their enlistment and training. He explained that they even had to create Comanche code words for "bomber" and "tank." These are words that did not exist in the Comanche language.

For the Amateur Radio Newsline, I’m Norm Seeley, KI7UP.
--

Chibitty is a decorated veteran and the last surviving member of the 16 Comanche Code Talkers. You can read more at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-228074A1.doc (CGC Communicator, FCC)

Hello:

New listener. Live outside of Boston.
Using a RS Discone, and a NRD 545 with Converter.

Where is a good web site to see what is available in the 1 to 2 Giga-Hz range ?

Anyone care to suggest any "interesting" util freq's., etc., in that range ?

Thanks,
Bob

Greetings -
While the Name & Address thing was an "annoyance" it did assure us of
a "flyer" monthly ---- so since they QUIT the catalog, this sounds
like the "flyer" is the next thing to go. While I like the
"convience" of Radio Shack they are making it as hard as possible to
keep doing business with them ----- what ARE they thinking?
Cheers,
terry

Hi there,
I have the following scanners for sale

Radio Shack Pro-39
200 channel hand held
Full Cellular coverage
very good condition
$95 plus shipping

Uniden Bearcat BC-760XLT
100 channel 800 Mhz mobile scanner (no cell)
good condition $90 plus shipping

Sony Wave Hawk ICF-SC1
Hand held scanner like new condition
800 Mhz (no cell)
$100 plus shipping

Radio Shack PRO-2045
200 channel base radio like new condition
loaded with features,
$120 plus shipping

Radio Shack Pro-26
like new in the box with all accessories
Can be cellular modified
$140 plus shipping

Any question please feel free to e-mail me directly at
rusty@dccnet.com
-Russ

Having a computer and knowing how to use it doesn't help if RS removes the information from their website. I have found that when something is placed on clearance, they drop the listing on their website. It used to be that the listing would stay with the notation that the item was discontinued but that stock might still be available in the stores, No longer. So you can't look up a listing in their catalog (no catalog) and you can't look it up on their website. Apparently they don't want people to buy a discontinued item.

Cant find these Diodes? Any help? See only D42/43/44/45 ect....
Plse send any info or better location to look. Is it behind the front
panel? Still cant see them??? Thanks

From the net:

Looking at the rear of the front panel, on the left
hand side, you will see two diodes marked D503 (upper)
and D502 (lower). There will be two other slots
without diodes.

Carefully, clip the lead of diode marked D502 (the
lower of the two diodes).

This procedure restores the inhibited 800 MHz frequencies and 30 kHz
steps.ce the cover and plug in the PRO-2005.

5188. Best Scanner/Communications receiver under $1000??

Newsgroup: rec.radio.scanner
Date: 2002-11-24 05:03:20 UTC
From: RoDnSuE <chastain@naxs.com>
Message-ID: <xZYD9.4910$EY.4437@fe01>
Source record: 41325

Hi,

I'm new to the group but have been an amateur radio operator since the mid 70's. (WD4DPD now KD0XX) I have had several scanners in the past and have a couple now but I want a much better unit. I am looking at the following BASE receivers....

AOR AR 8600 II,

ICOM PCR1000,

YEASU VR 5000.

If you have one of these, or have another option, please write and tell me what you like or dislike about your current radio. The ICOM is interesting but kind of limited in what I want. I would like to have front panel control since the scanner will be near my bed. I want to remote locate the receiver in the bedroom upstairs and also be able to control and listen from the computer downstairs. I'm not really up on the computer control aspect. Do any of them have the audio on the computer control port or will I have to run an extra wire for that?

Whatever I do purchase will probably be with me for a LOOONG time so I will get a full coverage export version of whichever radio I settle on.

My requirements are...

1. Computer control and programming

2. 500+ memories

3. Reasonable scan speed

4. VFO control

5. Baseband audio output for digital decoding or at least modifiable for such.

6. Allmode (SSB, CW, AM, NFM, WFM)

7. Variable tuning rate at least down to 50hz

8. Variable selectivity.

My wants are...

1. DC-Light coverage:-))

*I'm a little flexible here but want at least 100khz-1300mhz

2. Digital Module availability for APCO 25

*It's here so I might as well have the capability.

3. 10.7MHz i.f. output

*Might need it someday

4. IR remote controllable

*Just because it's there:-)

That's about all I can think of. ANY SUGGESTIONS OR RECOMMENDATIONS??

Please send to jrc@naxs.com

Thanks,

James

If you are considering the PCR1000 then you should perhaps also look
at the WinRadio WR1550e. In my experience much better performance and
more features, including excellent software support. Also a remote
control and audio streaming option (over LAN).

http://www.winradio.com/home/1550e.htm
http://www.winradio.com/home/cso.htm

Hope this helps.

Ian

5190. Re: Radio Shack news!

Newsgroup: rec.radio.scanner
Date: 2002-11-24 05:50:59 UTC
From: Jeff Canar <jcanar@nospam.attbi.com>
Message-ID: <Xns92CFF296665AAjcanarattbicom@63.240.76.16>
Source record: 41327

What I like is people screaming about privacy in a newsgroup where scanners are regularly for sale that can listen in on private cell phone conversations. Just go back through and look at: (1) all the scanners for sale that can listen to the cell range, (2) are modifiable so you can listen to the cell range, and/or (3) questions asking about how to modify scanners so they can pick up cells, etc...

This is the last group of people that should be coming down on Radio Shack for an invasion of privacy when so many people here want to listen in on the private conversations of others.

just my .02
jeff

While at the launch I left a scanner at home recording the comms on 259.7000 in hope of catching the Shuttle on its ride to orbit. Well it worked, if you could like to hear the audio recorded directly from 259.7000 please check out http://www.MilAirComms.com

You can even hear Houstonï¿½s call to the shuttle for ï¿½go at throttle upï¿½, this is at the very beginning of the recording and is weak but readable. Does anyone know where the ground antenna is located for the 259.7000 Ground to Air comms? Also I couldnï¿½t hear any of Houstonï¿½s other calls to the shuttle so Iï¿½m assuming after that first call the turn off the transmitter in Florida? Anyone know how this really works? I was really surprised to catch the call from Houstonï¿½.

Iï¿½ve also made some updates to the CAP (Combat Air Patrol) frequency list on the website.

George

From: Ewan Humphrey <ewanh@bigpond.net.au>
Message-ID: <m0bE9.9845$hg1.20745@news-server.bigpond.net.au>
Source record: 41336

Hi,

Is anyone able to tell the specifications (such as how many amps and whether center pin is postive or negative) of the cigarette lighter power adapter for the Uniden BC120XLT?

The Uniden part number is UA-502 (straight) or UA-502A (coiled). I would go and buy the original however, not one stocks then in Australia, and it would cost me around $US32 to but it online (or $AUS 70 + visa costs - I bought the scanner for $250 - $70 for a cigarette adapter is a bit much to justify)

I'm after the technical detail, so I don;t damage the scanner. I had (another brand) scanner destroyed buy using an incorrect power adapter and I don't want to destroy another one. All I can find out is it needs a fused adapter at 13.8v DC.

thanks for your help,
Ewan

Wow,
You mean I can use the Win95 software, 1000 channels, to program the Pro93?
Does this mean it also converts the Pro93 to 1000 channels after you send
the P95 file to it?

My pro 92 hasn't been able to get the Riverside Sheriff for at least that
long if not longer (in trunked mode). I thought my radio was broken. I
think maybe there has been some juggling of the freqs.

I would really be interested in getting this problem sorted out also.

No they didn't.

1) Remove the two rear screws holding the plastic cover in place and slide the cover off.
2) Look for the logic board directly behind the front panel display. Directly behind the "3" and "6" keys you should see a place for 4 diodes with 2 actually installed in the slots.
3) The lower diode is marked "D-502". Clip one end of it with wire cutters and you're good to go.

I saw on the RS website they have a new handheld selling for $149 down from $249.

Their description is as follows:

High-performance, extended coverage scanner has the ability to scan both trunked and conventional channels at the same time. It has 1000 memories-arranged in 10 banks of 100-and 1000 ID memories that can display your text entries for easier identification of frequencies.

The triple conversion circuit and switchable 20dB attenuator cut image-type interference. The display provides 4 lines of 12 characters and has a push-button backlight with programmable on time. You can search preset non-trunked police/ fire, marine, CB, Ham and VHF-air frequencies for activity.

Extended coverage includes CB (AM), 220MHz and 1260MHz Ham bands. Weather alert sounds an alarm and the display indicates level of alert. PC interface permits computer control (software not included) and easy memory cloning with another PRO-95 scanner (cable extra).

Features:
. Power save
. Key tone on/off
. Frequency Coverage: 25-54, 108-136.9875, 137-174, 216-225, 406-512, 806-960 (excluding cellular) and 1240-1300MHz
. Power: Requires 4 "AA" batteries or adapter: AC #273-1767/C, DC #273-1810/C
. Jacks: Earphone, PC interface/cloning, antenna (BNC), external power
. Includes: Detachable flexible antenna, belt clip, two battery holders
. Size: (less antenna) 6-1/2"2-5/8"1-3/4"
. Includes: VHF Lo/Hi, UHF, VHF-Air, 800MHz, Dual-Trunking, Extended Coverage

So, does this sound like a good deal or what?

This scanner is in absolutely mint condition. It will be shipped double-boxed as I received it when first purchased (this year from Lentini Communications). All stock accessories are included. Additionally, the scanner will be sold with a Watson 889 telescoping whip.

Asking $425 = $10 shipping/ins O.B.O.

Please e-mail direct.

1- What is the average Mil capacity of the various name brand double "A" alkaline batteries? Not any particular brand but just the average capacity of the name brands.

2- Does anybody know the Mil capacity of the Rayovac double "A" rechargeable
alkaline battery?

3-What are the advantages or disadvantages if any of recharging a 300 mil battery for example and using a 1000 mil charging unit? TIA

Here is the solution as I received from another local -
<snip>

"YES! They added 3 freqs. to the system...they are as follows:
1.866.2125
2.866.2625
3.866.7125
4.866.7625
5.867.2125
6.867.7125
7.868.2125
8.867.2625
9.868.2625
10.868.7125
what they did is made these the freqs. for all of Northwest...County
Animal Control is now on the system (12-041) "

<end snip>

I programmed these freqs in the order given and everything works quite
well.

. Size: (less antenna) 6-1/2ï¿½2-5/8ï¿½1-3/4"
. Includes: VHF Lo/Hi, UHF, VHF-Air, 800MHz, Dual-Trunking, Extended Coverage

So, does this sound like a good deal or what?

I bought one and it is FANTASTIC ! A GREAT deal at this price and does it all.Sale ends Dec. 24, 2002, and they're going fast. If you want one, you better get it soon. And, if you DON'T like it, Rat Shack WILL take it back. Can't lose!!! (<:

They left out the MilAir Band once again. I use to be very fond of R/S scanners but they been dropping the MilAir band while other manufactures have been adding and infact promoting the MilAir band. Just another reason why my Shack (http://www.MilAirComms.com/shack.html) is starting to look like a Uniden Show Room....
